Hi Adam,

I hope that all is well with you! Cory and I reviewed the staff report and ITD's Floodplain Development Permit application for the replacement of Trail Creek Bridge. We just wanted to chime in with some comments and words of support:

- The widening of the bridge is good for the riparian habitat. More space will accommodate conveyance during flood flows, which will be less detrimental to and more supportive of fish migration.
- We support the revegetation plan. Follow-through on the revegetation plan, next spring, will be important to restoring the site post-construction.
- The Land Trust supports city staff's recommendation for stabilization via a geosynthetic grid that allows for continuous vegetation, rather than the soldier pile wall.
- We appreciate the drafted Conditions of Approval, supporting adherence to the approved plans and success of the revegetation.

Neither of us will be able to attend today, however please feel free to add this e-mail to the packet as a public comment and reach out if you have any questions.

All the Best,

Cece Osborn
