Traffic Engineer

US 26 Speed Study

Introduction

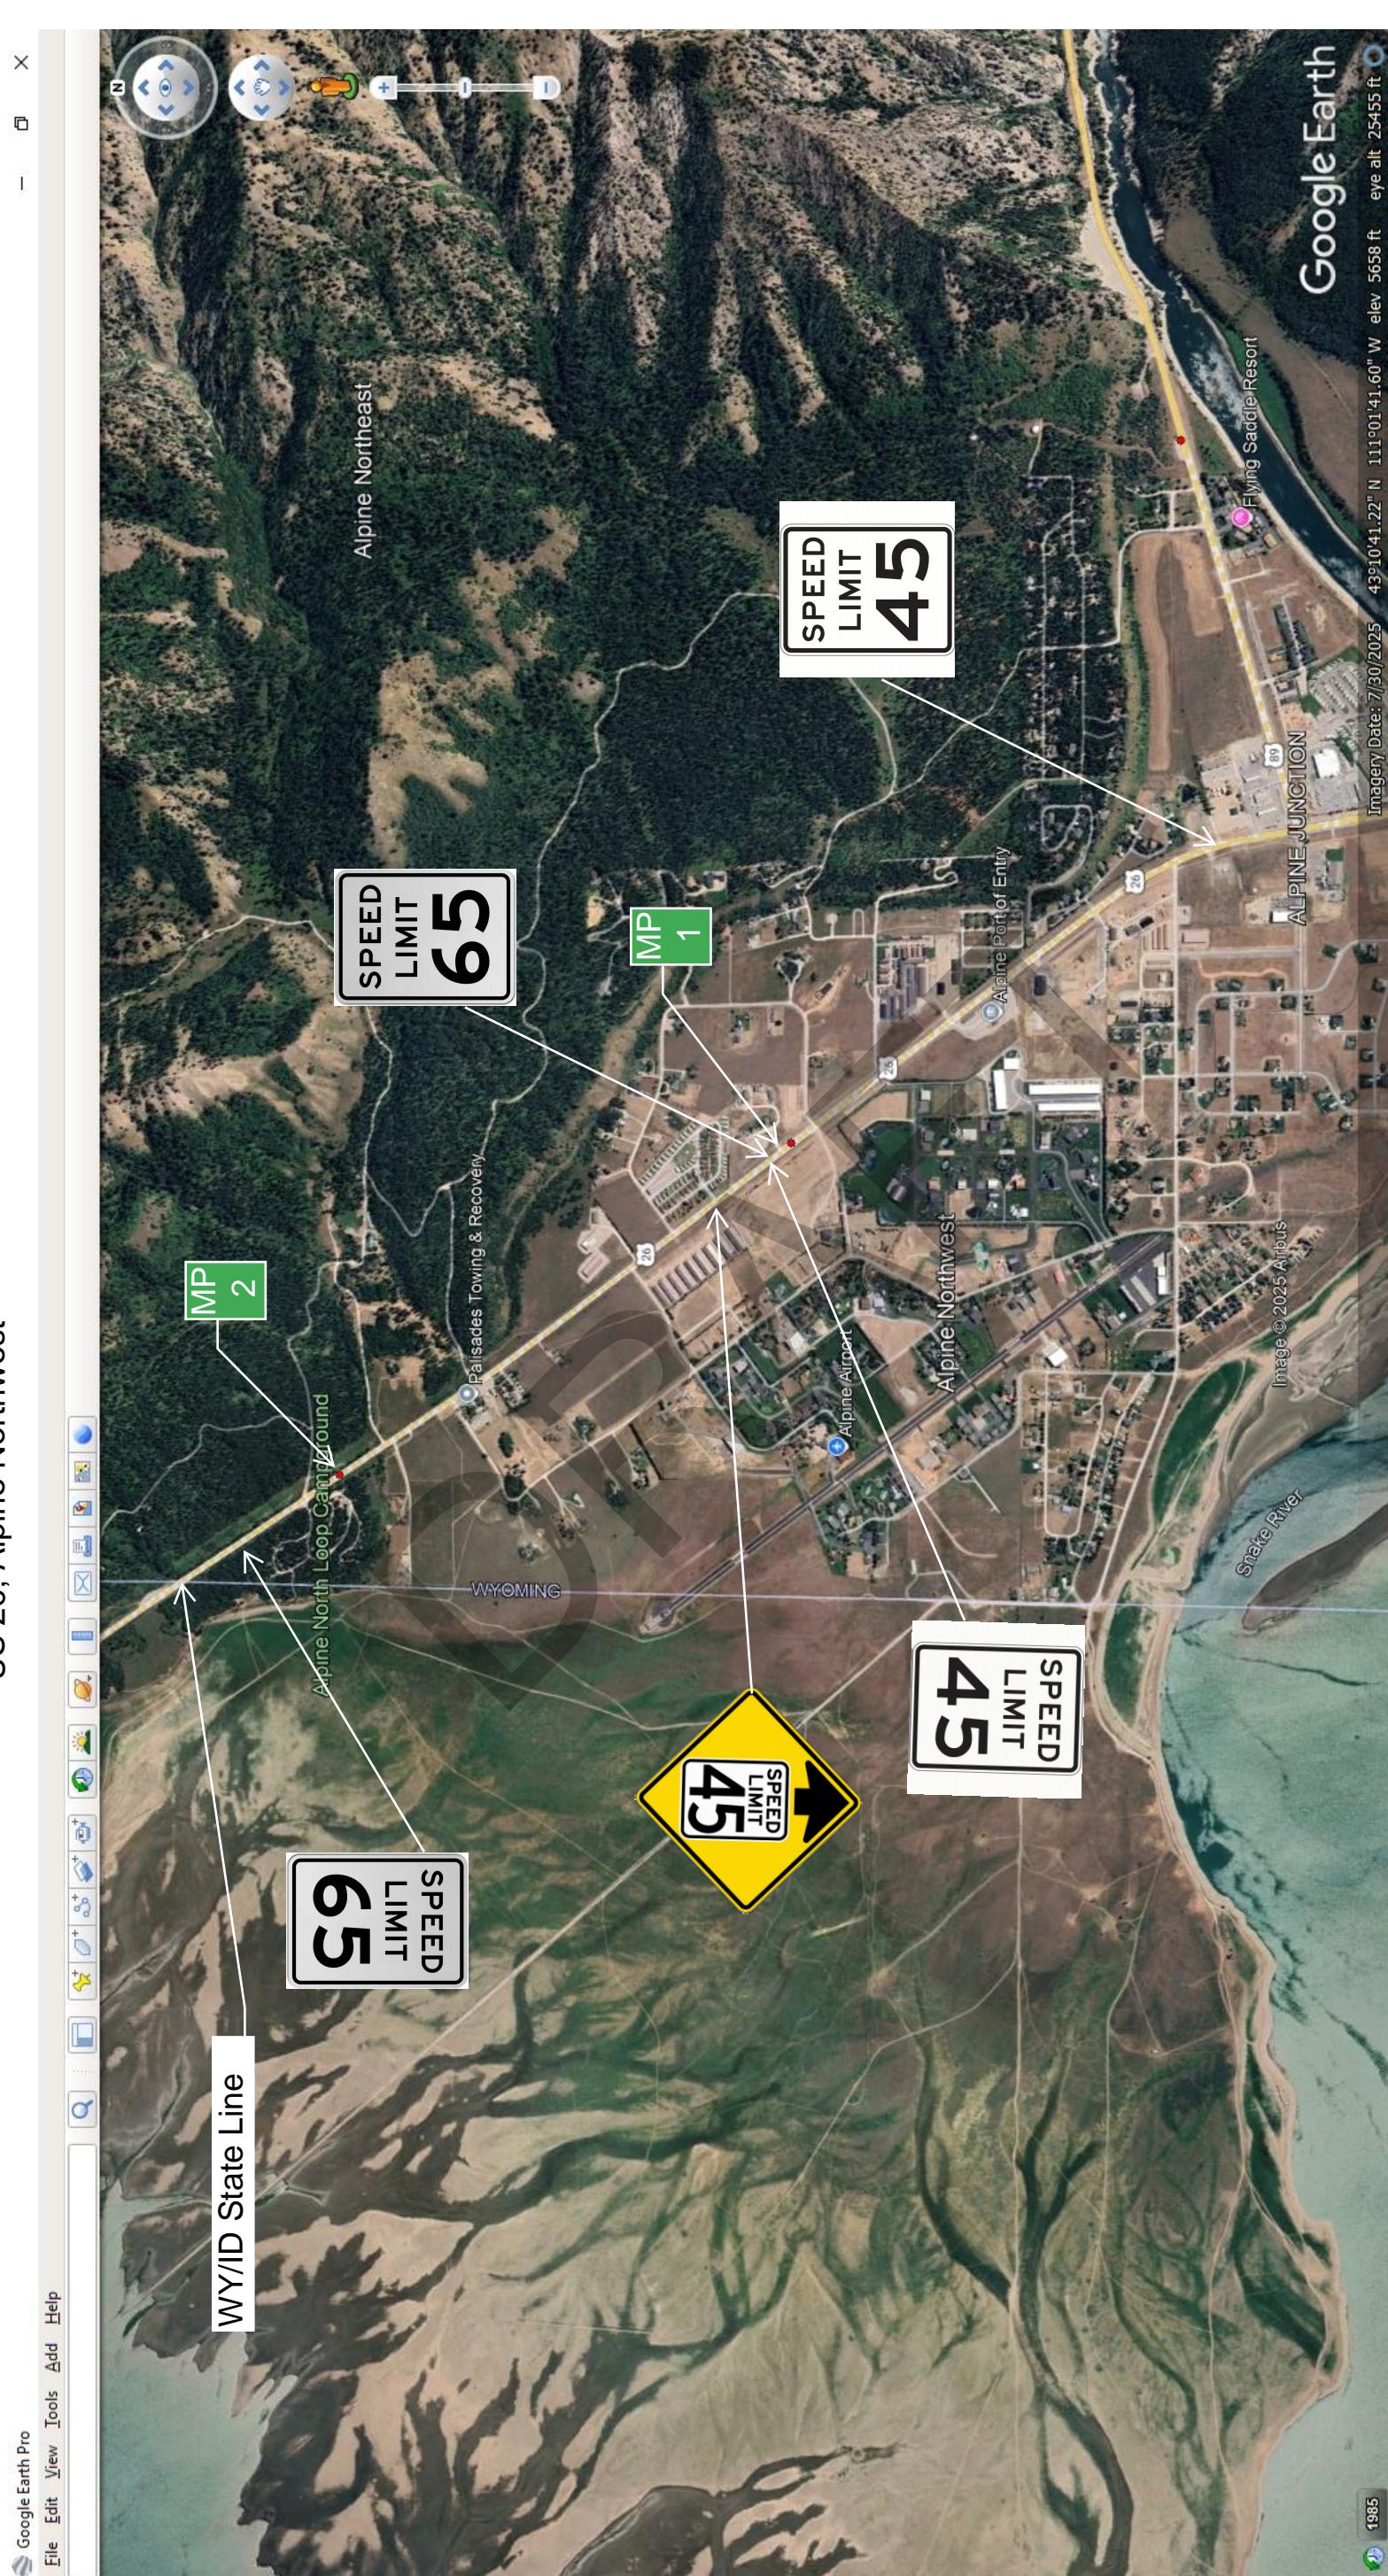

This study is in response to concerns submitted by local residents dated July 14, 2025 (see **Appendix A**). The primary concerns are turning movement conflicts and a request for a reduction in the posted speed limit in the area northwest of Alpine on US 26.

Corridor Description

US 26 (ML-9B) is a north-south rural principal arterial highway between Alpine Junction and the Idaho state line in Lincoln County. US 26 is a two-lane highway (one lane in each direction) with 4-foot shoulders. The intersection of US 26 and US 89 (Alpine Junction) is a signalized with vertical curb and roadway lighting. The posted speed limit, from south to north, is 45-mph (RM 0.00 to RM 1.05), and transitions to 65-mph north toward the Idaho state line. Within Idaho the posted speed limit is 65-mph. US 26 has a 2024 AADT of approximately 3,000 vehicles (300 trucks) and a 2020 – 2024 crash history of 32 total reported crashes (0 fatal, 7 injury, 25 property damage only). Parking is not available on the highway within the study area. Development consists of a mixture of residential homes, commercial, and undeveloped property scattered on both sides of the highway within the study limits.

Existing conditions are shown in **Exhibit 1**.

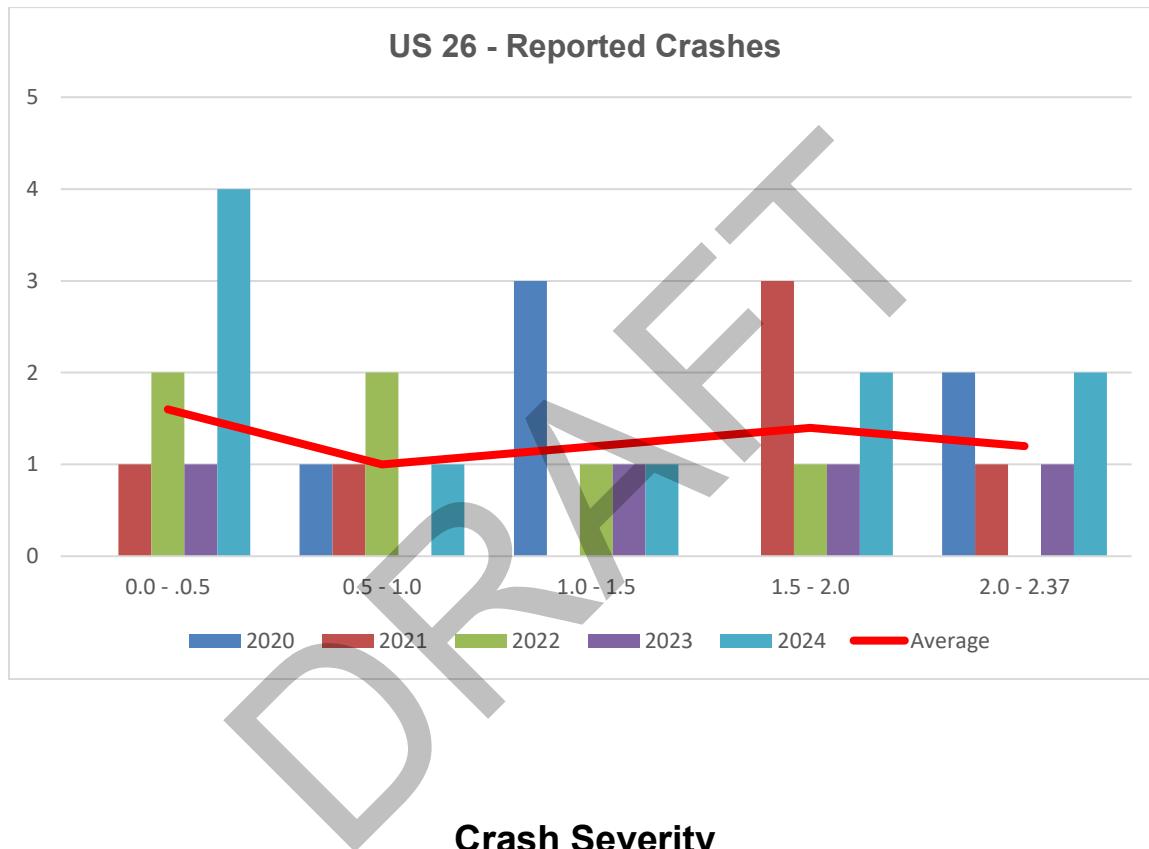

Exhibit 1
Existing Conditions
US 26, Alpine Northwest

Crash Analysis

Crash data was collected for the past five years (January 1, 2020 through December 31, 2024) for US 26. A printout of the crash data is attached (see **Appendix B**).

Crash data was broken down into years, crash severity, manner of collision, and first harmful event. Of the total 32 crashes there were no fatal, 7 injury, and 25 property damage only crashes on US 26.

Crash Severity

Milepost	Fatal Injury	Serious Injury	Minor Injury	Injury	Property Damage Only	Total
0.0 – 0.5		1		2	5	8
0.5 – 1.0					5	5
1.0 – 1.5		1		2	3	6
1.5 – 2.0			1		6	7
2.0 – 2.37					6	6

Manner of Collision

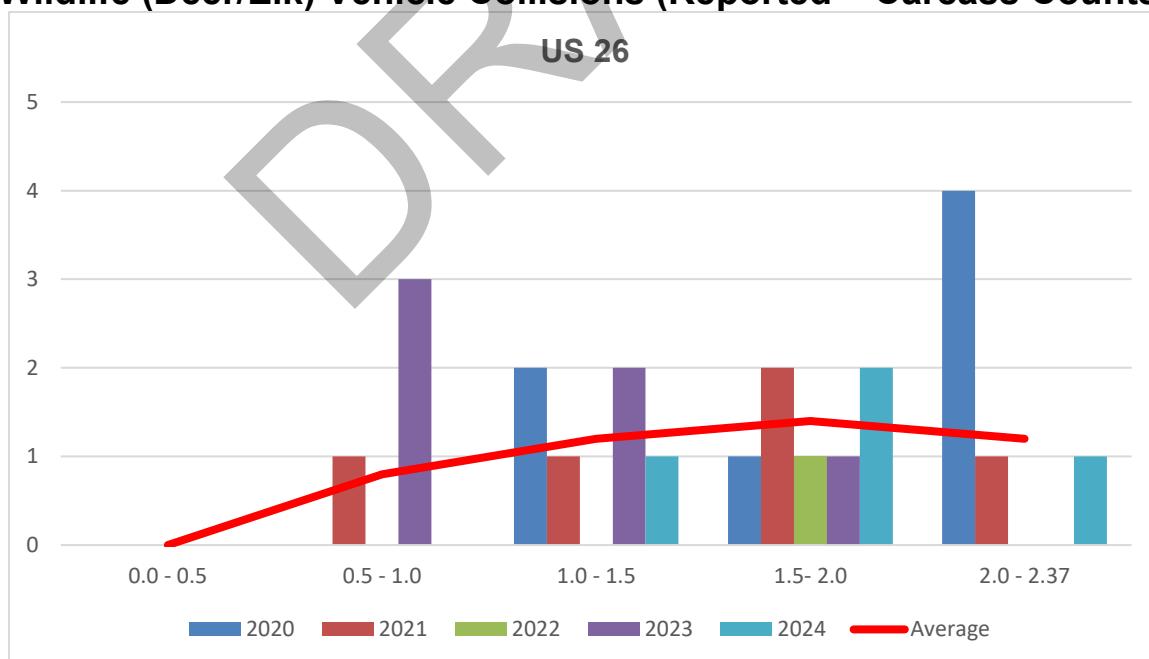

Milepost	Null	Rear End	Head On	Angle	Sideswipe Same Dir	Sideswipe Opp Dir	Single Vehicle	Backing	Other/ Unknown	Total
0.0 – 0.5		2	2	4						8
0.5 – 1.0		1		1	1		2			5
1.0 – 1.5	3	1					2			6
1.5 – 2.0	5						2			7
2.0 – 2.37	3			1	2					6

Null = Collision with either wild or domestic animals.

First Harmful Event

Milepost	Rollover	Motor Vehicle in Transport	Wild (Deer/Elk)	Domestic (Cow)	Snowbank	Fence	Trees Shrubbery	Other	Parked Vehicle	Total
0.0 – 0.5		7							1	8
0.5 – 1.0		3			1	1				5
1.0 – 1.5	1	1	3					1		6
1.5 – 2.0	1		4	1			1			7
2.0 – 2.37		3	3							6

Wildlife (Deer/Elk) Vehicle Collisions (Reported + Carcass Counts)

Speed Data Analysis

Staff performed free flow spot speed studies at 5 locations for both directions of travel on US 26. See the attached map for exact locations (**Exhibit 2**). The locations selected represent areas in different speed limit zones and roadway sections. A minimum 100-vehicle random sample data set of unobstructed free-flowing vehicles on a clear day is considered statistically adequate for a spot speed study. The sampled vehicles were not impeded by turning vehicles, slowing vehicles, or traffic control devices.

The 85th-percentile speed is the speed at which 85 percent of all vehicles were traveling at or below, under the prevailing conditions at the time of the spot speed study. According to the *Manual on Uniform Traffic Control Devices* (MUTCD), rural speed limits should be posted within 5 mph of the 85th-percentile speed of free-flowing traffic considering the following roadway context: Roadside development and environment, Roadway design, Roadway classification, and Crash history.

The pace shown in the spot speed study results tables are the 10-mph band where the greatest number of speed samples occurred. Preferably, the upper limit of the pace should reasonably correspond with the 85th-percentile speed and the posted speed limit. The lower limit of the pace is a number which the speed limit should never be at or below.

The existing speed zones and the results of the 5 spot speed studies, conducted at various locations on US 26, are shown in the tables below. In addition, a description of the results of the spot speed analysis, prevailing speeds, and the recommended speed limit for each section is provided. The individual spot speed study forms are attached (see **Appendix C**).

Exhibit 2 - Speed Study Locations

Spot Speed Study Results (US 26)

Location 1:		Northbound	Southbound
North of Alpine Junction (MP 0.15)	POSTED SPEED	45	45
	85 th % SPEED	47	43
	50 th % SPEED	39	36
	10 MPH PACE	38 – 47	35 – 44
	% COMPLIANCE	73	88

For the section of roadway north of Alpine, as shown in the table for Location #1 above, the 85th-percentile speeds were 2 mph above to 2 mph below, and the upper limit of the pace were 2 mph above and 1 mph below the posted speed limit of 45-mph. The speed data collected in this area indicates that motorists consider this section of roadway as urban, as indicated by the 85th-percentile speed being between 47 and 43 mph, and the pace being 38 – 47 mph and 35 - 44 mph, northbound and southbound respectively. Based on a review of the area, the roadway environment is urban. Based on the speed data, speed profile, speed compliance, and roadway environment in the area, the recommended speed limit from the speed study worksheets should remain unchanged.

Location 2:		Northbound	Southbound
North of Alpine Port of Entry (MP 0.84)	POSTED SPEED	45	45
	85 th % SPEED	59	51
	50 th % SPEED	52	44
	10 MPH PACE	49 – 58	41 – 50
	% COMPLIANCE	14	51

For the section of roadway north of Alpine, as shown in the table for Location #2 above, the 85th-percentile speeds were 14 mph to 6 mph above, and the upper limit of the pace were 13 mph and 5 mph above the posted speed limit of 45-mph. The speed data collected in this area indicates that motorists consider this section of roadway as a transition area between urban and rural, as indicated by the 85th-percentile speed being between 59 and 51 mph, and the pace being 49 – 58 and 41 - 50 mph, northbound and southbound respectively. Based on a review of the area, the roadway environment is developing. Based on the speed data, speed profile, speed compliance, and roadway environment in the area, the recommended speed limit from the speed study worksheets should remain unchanged.

Location 3:		Northbound	Southbound
South of Palisades Drive (MP 1.24)	POSTED SPEED	65	65
	85 th % SPEED	64	62
	50 th % SPEED	57	56
	10 MPH PACE	56 – 65	54 – 63
	% COMPLIANCE	84	91

For the section of roadway north of Alpine, as shown in the table for Location #3 above, the 85th-percentile speeds were 1 mph to 3 mph below, and the upper limit of the pace were 0 mph and 2 mph below the posted speed limit of 65-mph. The speed data collected in this area indicates that motorists consider this section of roadway as rural, as indicated by the 85th-percentile speed being between 64 and 62 mph, and the pace being 56 – 65 and 54- 63 mph, northbound and southbound respectively. Based on a review of the area, the roadway environment is a transition zone between rural and urban areas. Based on the speed data, speed profile, speed compliance, and roadway environment in the area, the posted speed limit from the speed study worksheets may be reduced.

Location 4:		Northbound	Southbound
North of Palisades Drive (MP 1.37)	POSTED SPEED	65	65
	85 th % SPEED	65	64
	50 th % SPEED	59	57
	10 MPH PACE	56 – 65	56 – 65
	% COMPLIANCE	82	85

For the section of roadway north of Alpine, as shown in the table for Location #4 above, the 85th-percentile speeds were 0 mph to 1 mph below, and the upper limit of the pace were 0 mph below the posted speed limit of 65-mph. The speed data collected in this area indicates that motorists consider this section of roadway as rural, as indicated by the 85th-percentile speeds between 65 mph and 64 mph, and the pace being 56 – 65 mph, northbound and southbound respectively. Based on a review of the area, the roadway environment is a transition zone between rural and urban areas. Based on the speed data, speed profile, speed compliance, and roadway environment in the area, the posted speed limit from the speed study worksheets may be reduced.

Location 5:		Northbound	Southbound
Near Alpine Campground (MP 1.91)	POSTED SPEED	65	65
	85 th % SPEED	67	63
	50 th % SPEED	61	57
	10 MPH PACE	59 – 68	55 – 64
	% COMPLIANCE	71	89

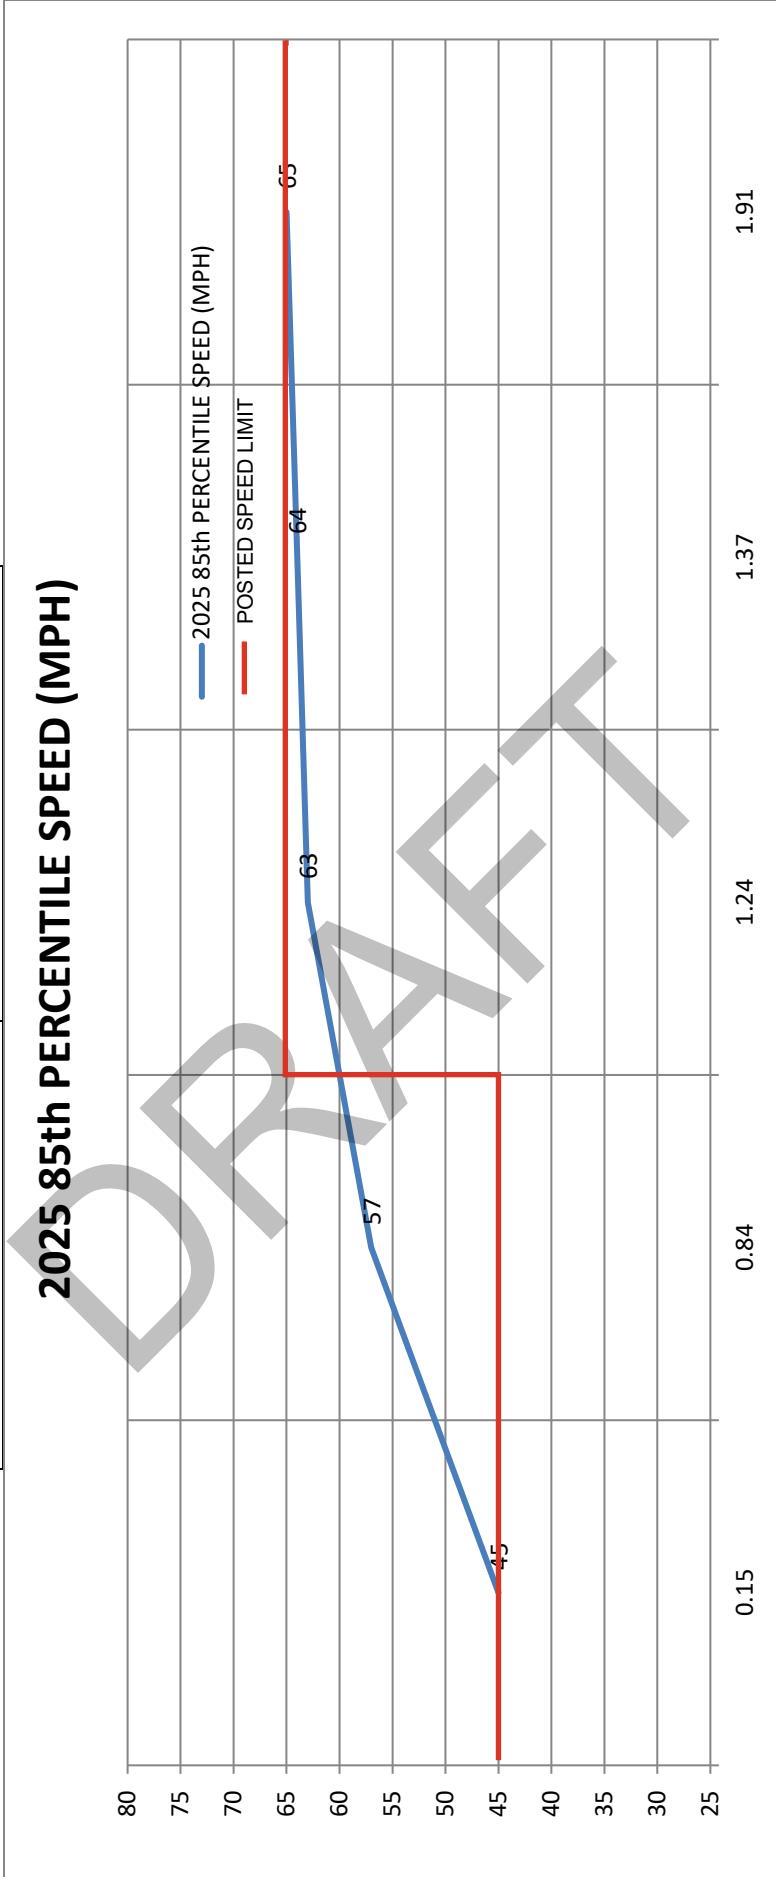

For the section of roadway north of Alpine, as shown in the table for Location #5 above, the 85th-percentile speeds were 2 mph above to 2 mph below, and the upper limit of the pace were 2 mph above and 1 mph below the posted speed limit of 65-mph. The speed data collected in this area indicates that motorists consider this section of roadway as rural, as indicated by the 85th-percentile speeds between 67 mph and 63 mph, and the pace being 59 – 68 mph and 55 – 64 mph, northbound and southbound respectively. Based on a review of the area, the roadway environment is rural. Based on the speed data, speed profile, speed compliance, and roadway environment in the area, the recommended speed limit from the speed study worksheets should remain unchanged.

The attached speed profile graph (**Exhibit 3**) plots the combined northbound and southbound 85th-percentile speed data with the posted limit north of Alpine.

Conclusion

Based on the results of the speed study and roadside environment, it appears that the existing posted speed limit of 45mph has fair compliance. This area is developing and posted speed limit is set based on the roadway context.

North of the posted 45mph speed limit is an area changing from rural to suburban. The speed profile indicates that motorists are adjusting their speeds. Due to the increasing development and roadway environment, a speed transition may be considered.

Recommendations

In response to the written request for a reduced speed limit and increased awareness of turning traffic north of Alpine, from a traffic engineering study perspective a speed transition may be considered.

In review of the speed data and roadside environment, modifications to the existing posted limit are recommended as noted below:

45 mph, RM 0.00 to 1.05 (remain as-is)

55 mph, RM 1.05 to 1.46 (new)

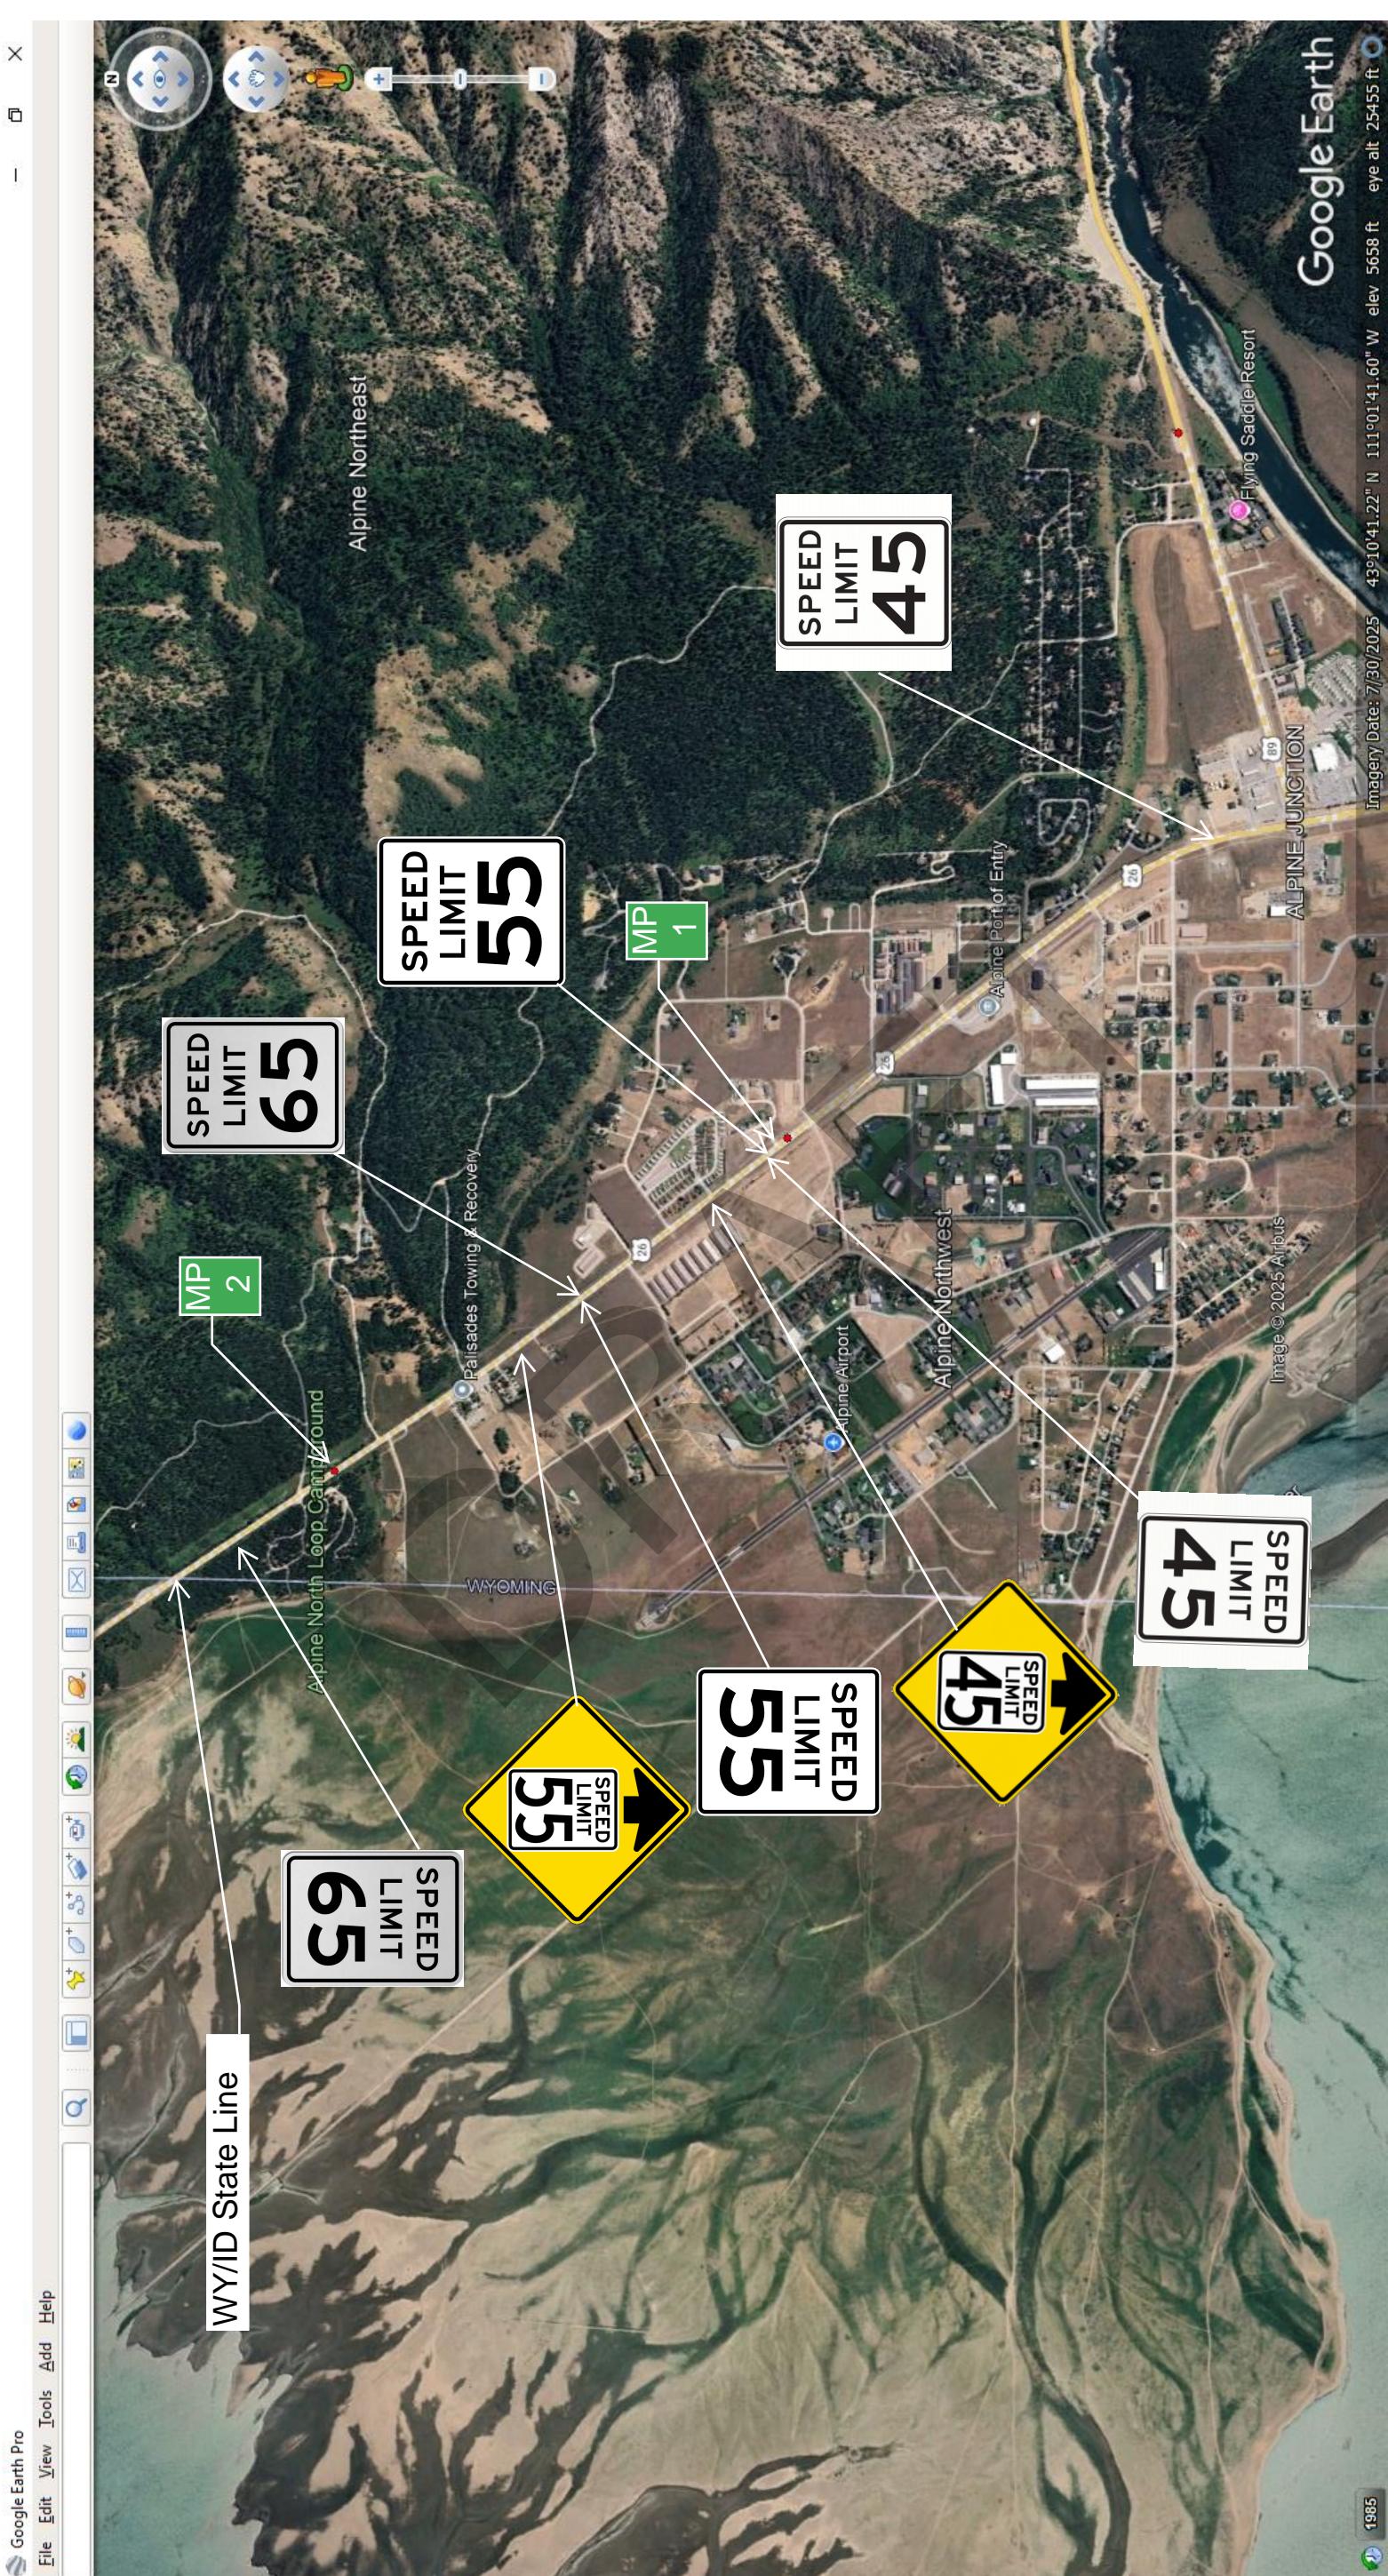

65 mph, RM 1.46 to 2.37 (remain as-is)

The proposed speed limits are shown in **Exhibit 4**.

USLIMITS2 Comparison

The Engineering Approach recommendation above was compared against the USLIMITS2 (Expert System) Approach. The Expert System model uses a decision algorithm to advise the user of the posted speed limit for a specific road section. In other words, the Expert System uses many of the same inputs as the Engineering Approach, minus engineering judgment. The Expert System was used to validate the recommendations made above. Based on the USLIMITS2 Speed Zoning Reports (**Appendix D**) the Engineering Approach recommendation above is supported.

To: Darin Kaufman <darin.kaufman@wyo.gov>

Cc: John Eddins <john.eddins1@wyo.gov>, Stephanie Harsha <stephanie.harsha@wyo.gov>

Darin, this complaint came into our headquarters, but it seems to be primarily regarding the speed limit and road design (no turn lanes), so I'm forwarding this on to you.

Thanks,

Captain Marc Russell

Public Compliment or Complaint Form

The Wyoming Highway Patrol is dedicated to providing the highest quality services to residents and visitors of Wyoming. Your compliments and complaints are important. We appreciate you taking the time to communicate with us.

Please identify if this is a compliment or a complaint.

About you:				
Name: Ms. Saundra Chefan		Home Phone: 5613174362	Work Phone:	
Home Street Address: 40 East Reserve Drive		City: Alpine	State/Prov: Wy	Country: USA
Work Street Address:		City:	State/Prov:	Zip Code: 83128

To be able to identify the WHP employee(s) to which you refer, it is important that you be as specific as possible in your description of the employee(s) and the incident.

About the incident:				
#1 Employee's Name:		Badge #:	Date:	Time:
#2 Employee's Name:		Badge #:	Location:	
Veh Make:	License Plate No.	Other Descriptive Information:		Citation #:

Please provide a brief description of the event(s) that caused you to bring this to our attention.

Dear Sir/Madam: I am writing you of an issue regarding the speed limit on Hwy 89 crossing over from Idaho, along the Palisades into Alpine, WY. As a fairly new resident (5 years) of the Alpine Airpark, I have witnessed multiple accidents and near misses along this stretch of road involving vehicles attempting to slow down and turn right into 3 entrances into the Airpark. The speed limit coming from Idaho into Wyoming is 65 mph. There is a hill as you come into Wyoming from Idaho. Trucks and passenger vehicles gun it into Wyoming, barely slowing down to notice the turning traffic or even pedestrians like myself and other walkers who cross 89 to start the trailhead of the Jordon Loop to hike. We personally turn right onto Palisades Drive adjacent to a row of storage units to get to our home in the airpark. I must put on my turn signal a mile before my turn as the vehicles behind me are going so fast, I fear a rear end collision every day. There is no turn lane from either direction. The same thing happens if you are coming from the town of Alpine heading to Idaho. There is a small airport sign on the left side the road. Again, you have to put your signal on a mile head of that turn to alert drivers you intend to turn. Several years ago, we witnessed one of our neighbors being

Narrative continued from page 1

slammed from behind, totaling their vehicle and sending them to the hospital. We expect, without DOT changing the speed limits immediately, and stopping the use of compression brakes, or adding some turn lanes, tragedy is just a day away. We would like to see new lower speed signs installed, such as 45 at the Idaho/Wyoming border. Once over the border into Wyoming, 35 mph going into Alpine both coming and going would avert disaster. Many tourists travel this road to the Palisades and through town to Jackson this time of year.

I look forward to hearing from your organization about a plan to slow the traffic down, install turn lanes and quiet the compression brakes along this roadway.

Thank you for any and all consideration.

WYOMING Department of Transportation

Highway Safety Segment Crash History Report

Roadway Name:

County:LINCOLN

City:

Note: This report was created from data extracted from multiple sources, which are considered to be reliable and up-to-date. However, some of the data sets are known to have some issues (these are consistency and location concerns with the signs focus in the location and nature of safety issues along the study segment). It is expected that on-site validation would be performed before any investment decisions are made.

APPENDIX D

USLIMITS

DRAFT

USLIMITS2 Speed Zoning Report

Project Overview

Project Name: Alpine US 26

Analyst: Darin Kaufman

Date: 2025-08-27

Basic Project Information

Project Number: 1
Route Name: US 26 - Alpine Spur
From: 0.84
To: 1.91
State: Wyoming
County: Lincoln County
City: Alpine Northwest CDP
Route Type: Road Section in Undeveloped Area
Route Status: Existing

Crash Data Information

Crash Data Years: 5.00
Crash AADT: 2700 veh/day
Total Number of Crashes: 12
Total Number of Injury Crashes: 4
Section Crash Rate: 221 per 100 MVM
Section Injury Crash Rate: 74 per 100 MVM
Crash Rate Average for Similar Roads: 141
Injury Rate Average for Similar Roads: 48

Roadway Information

Section Length: 1.1 mile(s)
Statutory Speed Limit: 70 mph
Existing Speed Limit: 65 mph
Adverse Alignment: No
Divided/Undivided: Undivided
Number of Lanes: 2
Roadside Hazard Rating:
Transition Zone:

Traffic Information

85th Percentile Speed: 64 mph
50th Percentile Speed: 58 mph
AADT: 2700 veh/day

Recommended Speed Limit:

Note: The section crash rate of 221 per 100 MVM is more than 30 percent above the average for similar roads (141) but below the critical rate (234). The injury crash rate for the section of 74 per 100 MVM is more than 30 percent above the average for similar roads (48) but below the critical rate (106). A comprehensive crash study should be undertaken to identify engineering and traffic control deficiencies and appropriate corrective actions. The speed limit should only be reduced as a last measure after all other treatments have either been tried or ruled out.

Note: A speed zone of 1.1 miles is generally too short for the recommended speed limit. Consider lengthening the speed zone (if that is possible) or using the speed limits from adjacent sections (if they are appropriate for this section). If the speed and other data you provided are representative of conditions for this short section, then the speed limit noted above may be considered.

Disclaimer: The U.S. Government assumes no liability for the use of the information contained in this report. This report does not constitute a standard, specification, or regulation.

How the Recommended Speed Limit was Determined

The questions and responses below, and the referenced page numbers, correspond to the flowcharts found in the [Decision Rules Flowchart document](#).

Terms Used in the Recommendation

- **Closest 85th:** This is the 5 mph increment that is closest to the 85th percentile speed (e.g., if the 85th percentile speed is 63 mph, the Closest 85th will be 65 mph).
- **Rounded-down 85th:** This is the 5 mph increment obtained by rounding down the 85th percentile to the nearest 5 mph increment (e.g., if the 85th percentile speed is 63 mph, the Rounded-down 85th will be 60 mph).

- **Closest 50th:** This is the 5 mph increment that is closest to the 50th percentile speed (e.g., if the 50th percentile speed is 58 mph, the Closest 50th will be 60 mph).
- **SL_1:** Speed limit determined using site characteristics (e.g., AADT, interchange spacing, roadside hazard rating, ped/bike activity, number of traffic signals, etc.).
- **SL_2:** Speed limit determined using crash data from the crash module.
- **SL:** Recommended Speed Limit.

The Recommended Speed Limit (SL) is the lower of the speed limit determined without crash data (SL_1) and the speed limit determined with crash data (SL_2).

Determine SL_1 Using Site Characteristics (pg. K-14)

Question 1: What is the roadside hazard rating (RHR)?

Results: Because the RHR () is less than 4, **the SL_1 is the closest 85th speed (65 mph).**

Question 2: Are crash data available?

Results: Yes, so use these data to determine SL_2.

Determine SL_2 Using Crash Data (pg. K-15)

Question 3: Is more than one year of crash data available?

Results: Yes, at least one year of crash data is available.

Note: The crash rate is calculated to be 221 crashes per 100M VMT, and the injury rate is calculated to be 74 crashes per 100M VMT.

Note: The critical crash rate is calculated as 234 crashes per 100M VMT.

Question 4: Is the crash rate (221 per 100M VMT) greater than the critical crash rate (234 crashes per 100M VMT)?

Results: No, but the crash rate is greater than 1.3 times the average crash rate. **The crash level is classified as medium.**

Question 5: Is the injury crash rate (74 per 100M VMT) greater than the critical injury rate (106 crashes per 100M VMT)?

Results: No, but the injury crash rate is greater than 1.3 times the average injury crash rate. **The injury level is classified as medium.**

Question 6: Are either of the crash level (medium) or injury crash level (medium) classified as medium or high?

Results: Yes, **so the total crash level is classified as medium.**

Question 7: Is the total crash level (medium) classified as medium or high?

Results: Yes, so **SL_2 is set as the higher of the rounded-down 85th and closest 50th speeds (60 mph).**

Determine SL (pg. K-12)

Note: SL is set as the lower of SL_1 (65 mph) and SL_2 (60 mph). **The SL is set to 60 mph.**

Determine the Final Recommended Speed Limit (pg. K-19)

Question 8: Is the SL less than 25 mph or greater than 65 mph?

Results: The SL (60 mph) is between 25 mph and 65 mph. **The SL remains the same.**

Final Recommendation: The recommended speed limit is 60 mph.

Equations Used in the Crash Data Calculations

Exposure (M)

$$M = \frac{(\text{Section AADT} * 365 * \text{Section Length} * \text{Duration of Crash Data})}{(1000000000)}$$

$$M = \frac{(2700 * 365 * 1.1 * 5.00)}{(1000000000)}$$

$$M = 0.0542$$

Crash Rate (Rc)

$$Rc = \frac{(\text{Section Crash Average} * 100000000)}{(\text{Section AADT} * 365 * \text{Section Length})}$$

$$Rc = \frac{(2.40 * 100000000)}{(2700 * 365 * 1.1)}$$

$$Rc = 221.39 \text{ crashes per 100 MVM}$$

Injury Rate (Ri)

$$Ri = \frac{(\text{Section Injury Crash Average} * 100000000)}{(\text{Section AADT} * 365 * \text{Section Length})}$$

$$Ri = \frac{(0.80 * 100000000)}{(2700 * 365 * 1.1)}$$

$$Ri = 73.80 \text{ injuries per 100 MVM}$$

Critical Crash Rate (Cc)

$Cc = \text{Crash Average of Similar Sections} + 1.645 * (\text{Crash Average of Similar Sections / Exposure})^{(1/2)} + (1 / (2 * \text{Exposure}))$

$$Cc = 141.17 + 1.645 * (141.17 / 0.0542)^{(1/2)} + (1 / (2 * 0.0542))$$

$Cc = 234.35 \text{ crashes per 100 MVM}$

Critical Injury Rate (Ic)

$Ic = \text{Injury Crash Average of Similar Sections} + 1.645 * (\text{Injury Crash Average of Similar Sections / Exposure})^{(1/2)} + (1 / (2 * \text{Exposure}))$

$$Ic = 47.84 + 1.645 * (47.84 / 0.0542)^{(1/2)} + (1 / (2 * 0.0542))$$

$Ic = 105.93 \text{ injuries per 100 MVM}$
