

Public Works Director Report
Craig Leseberg
June 2026

Road Maintenance

Contractor crews are scheduled to grade all Town dirt roads on June 4 and June 5 to improve road conditions and prepare surfaces for seasonal maintenance. Following grading activities, a dust control treatment will be applied on June 5 to help reduce airborne dust and improve driving conditions throughout the summer season.

Water Systems

Public Works staff has been performing ongoing water quality testing throughout the Town's water systems to satisfy EPA monitoring and compliance requirements. This work helps ensure the Town continues to provide safe, reliable drinking water while maintaining compliance with federal regulations.

AMI Meter Project

The Advanced Metering Infrastructure (AMI) project is entering its final stages. Public Works staff has been coordinating with Jorgensen Engineering to secure the necessary permits for the Targhee vault, main meter installation, and backflow prevention equipment. All required permits and approvals have been obtained, and the project is now moving forward into the next phase of implementation.
