POWER PLANT/LAKE

Well, another 4th has gone by and it's no surprise with the wonderful things you find in the bath houses, after power washing them all out again on the 5th and then removing a broken bench from the Saturday night activities it was pretty much normal maintenance and mowing.

We went out on Monday morning following the holiday and moved some marker buoys back where they belong, unsure how they moved because they were very hard to move back. Also were informed that the lock was missing on the tower in front of the dam so we installed a new lock on the inspection door.

We spent a lot of time getting the grass mowed and limbs picked up around the plant property as it kind of got neglected with the holiday.

We are working on spending more time in the plant and getting things done we need to do as we prepare for summer SPP market testing of our units.

LB has an EMP2 meeting this week that I really wanted to attend in person but it's looking like I will just have to zoom in.

Still having trouble with truck #4 so we are scheduling it into a ford dealership.

Normal everyday things and fires that come up.

WATER/WASTEWATER

7/1 Rounds

Spraying sewer plant

16" water main repair

Diagnose water tower lift station after a lightning strike

Garfield lift station vacuum pump repair

7/8 Rounds

Mowed water plant
