911 Logging Recorder & API Sole Source Request

Department:	911 Emergency Services
Presenter:	Daniel R. Dunlap, Director
Caption:	Motion to approve sole source purchase for secondary logging recorder and an Application Program Interface (API) for the 911 Center from Replay Systems, Inc. for $209,088.06.
Background:	In December 2025, the 911 Center began the process to replace the current logging recorder solution by utilizing an "Option to Upgrade" with the current contracted vendor, Replay Systems, Inc. and the purchase of a primary recorder was approved by the Procurement Department and Administrator's Office. The primary recorder is operational and currently recording all 911 and non-emergency telephone calls. The second phase of the project requires a secondary recorder for redundancy and a Motorola Application Program Interface (API) radio server/recorder to record the IP-based 800 MHz radio traffic and data.
Analysis:	The secondary recorder and API will ensure redundancy for recording all 911 calls and all radio transmissions/data. Maintaining standardization with the current vendor ensures maintenance and support. The sole source purchase via the current vendor is the best use of available funding.
Financial Impact:	The cost of all hardware, software, licensing, integration services, training and warranty is $209,088.06. This purchase meets the allowable expenditure qualifications in O.C.G.A. 46-5-134.
Alternatives:	None.
Recommendation:	Approve the sole source purchase.
Funds are available in the following accounts:	Emergency Telephone Fund Balance Account
REVIEWED AND APPROVED BY:	Daniel R. Dunlap, Director
