

PROJECT BELOVED

Trauma informed care (TIC) considers and understands the body's biological and neurological response to trauma. Evidence based practices call for a trauma informed approach to reports of rape and sexual assault, and a soft interview room is considered an integral component of TIC. Creating a space that is comfortable rather than stark allows the participant to feel physically and emotionally safe and can have a significant impact on the interview process. Soft interview rooms can also be useful when interviewing those suspected of committing crimes as well.

Mission:

Project Beloved strives to educate, advocate, and collaborate to change the conversation about sexual assault and empower survivors to find their voices.
