Executive Summary

A traffic impact study was prepared for the Bluffton Community Hospital development. The proposed development is located west of the Bluffton Parkway at Buckwalter Parkway intersection and is proposed to consist of a 91,000 SF hospital. It is assumed that the project will access the roadway network via a right-in right-out (RIRO) driveway on Bluffton Parkway and a full-access driveway on Innovation Drive.

It was assumed that the development will be built and fully occupied by 2027. This study summarizes the results of the traffic analyses at the following five study intersections.

- 1) Innovation Drive at Bluffton Parkway
- 2) Bluffton Parkway at Access #1
- 3) Innovation Drive at Access #2
- 4) Bluffton Parkway at Buckwalter Parkway
- 5) Buckwalter Place Boulevard at Buckwalter Parkway

The results of the traffic analyses indicate the following improvements are recommended to mitigate the deficient LOS conditions in the study area.

Innovation Drive at Bluffton Parkway

- Install a traffic signal based on the traffic signal warrant analysis.
 - Note: A traffic signal is shown at the intersection of Innovation Drive at Bluffton Parkway in the *Bluffton Parkway Access Management Plan*.

Bluffton Parkway at Access #1

- No capacity improvements are recommended at this intersection.

Innovation Drive at Access #2

- No capacity improvements are recommended at this intersection.

Bluffton Parkway at Buckwalter Parkway

- No capacity improvements are recommended at this intersection.

Buckwalter Place Boulevard at Buckwalter Parkway

- No capacity improvements are recommended at this intersection.

ATTACHMENT 5

1 Introduction

The purpose of this traffic impact study is to review the vehicular traffic impacts of the proposed Bluffton Community Hospital development in Bluffton, South Carolina. The proposed development is located on Bluffton Pkwy and is proposed to consist of a 91,000 SF hospital. It is assumed that the project will access the roadway network via a single full-access project driveway along Innovation Drive and a right-in right-out (RIRO) driveway on Bluffton Parkway. The location of the proposed development and concept plan are illustrated in **Figure 1** and **Figure 2**.

A traffic impact study was prepared for the Bluffton Community Hospital development. It was assumed that the development will be built and fully occupied by 2027. This study summarizes the results of the traffic analyses of 2024 Existing, 2027 No Build, and 2027 Build conditions at the following study intersections:

- 1) Innovation Drive at Bluffton Parkway
- 2) Bluffton Parkway at Access #1
- 3) Innovation Drive at Access #2
- 4) Bluffton Parkway at Buckwalter Parkway
- 5) Buckwalter Place Boulevard at Buckwalter Parkway

1.1 Existing Conditions

Bluffton Parkway (L-1863) is a four-lane, undivided, urban minor arterial with a posted speed limit of 45 mph. Based upon SCDOT data, 21,200 vehicles per day traveled along Bluffton Pkwy in 2023 at a count station located west of the Bluffton Parkway at Innovation Drive intersection.

Innovation Drive (L-1937) is a two-lane, undivided, urban local with a posted speed limit of 45 mph. No daily count data is available for Innovation Drive.

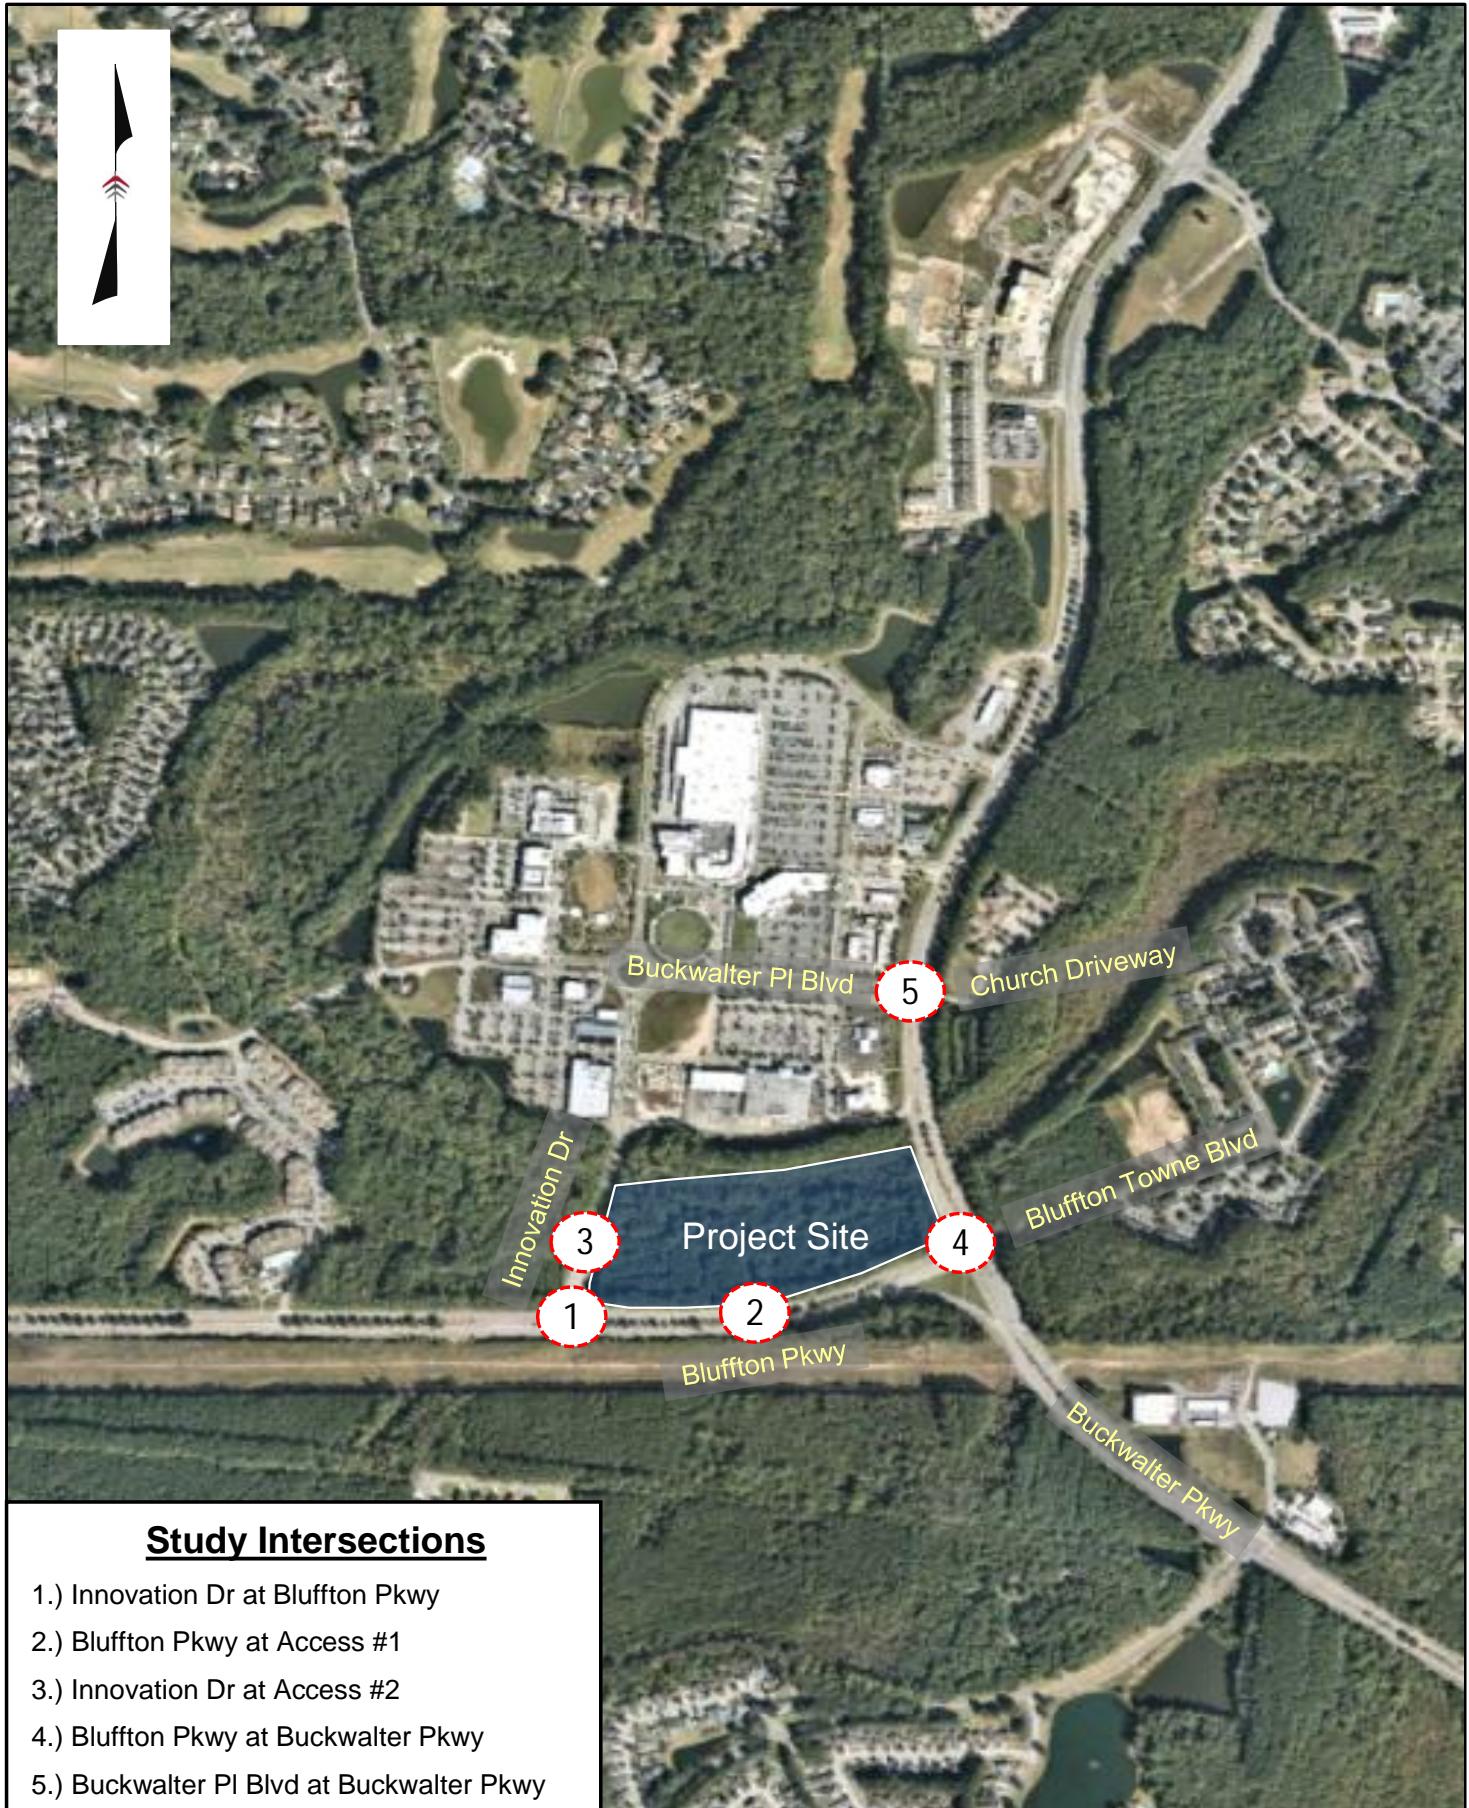

Buckwalter Parkway (L-1525) is a four-lane, undivided, urban minor arterial with a posted speed limit of 45 mph. Based upon SCDOT data, 20,400 vehicles per day traveled along Buckwalter Parkway in 2023 at a count station located north of the Buckwalter Parkway at Bluffton Parkway.

Buckwalter Towne Boulevard (L-749) is a two-lane, undivided, urban local with a posted speed limit of 25 mph. No daily count data is available for Buckwalter Towne Boulevard.

Buckwalter Place Boulevard (L-1087) is a two-lane, undivided, urban local with a posted speed limit of 35 mph. No daily count data is available for Buckwalter Place Boulevard.

The existing geometry and traffic control for the study area intersections is illustrated in **Figure 3**.

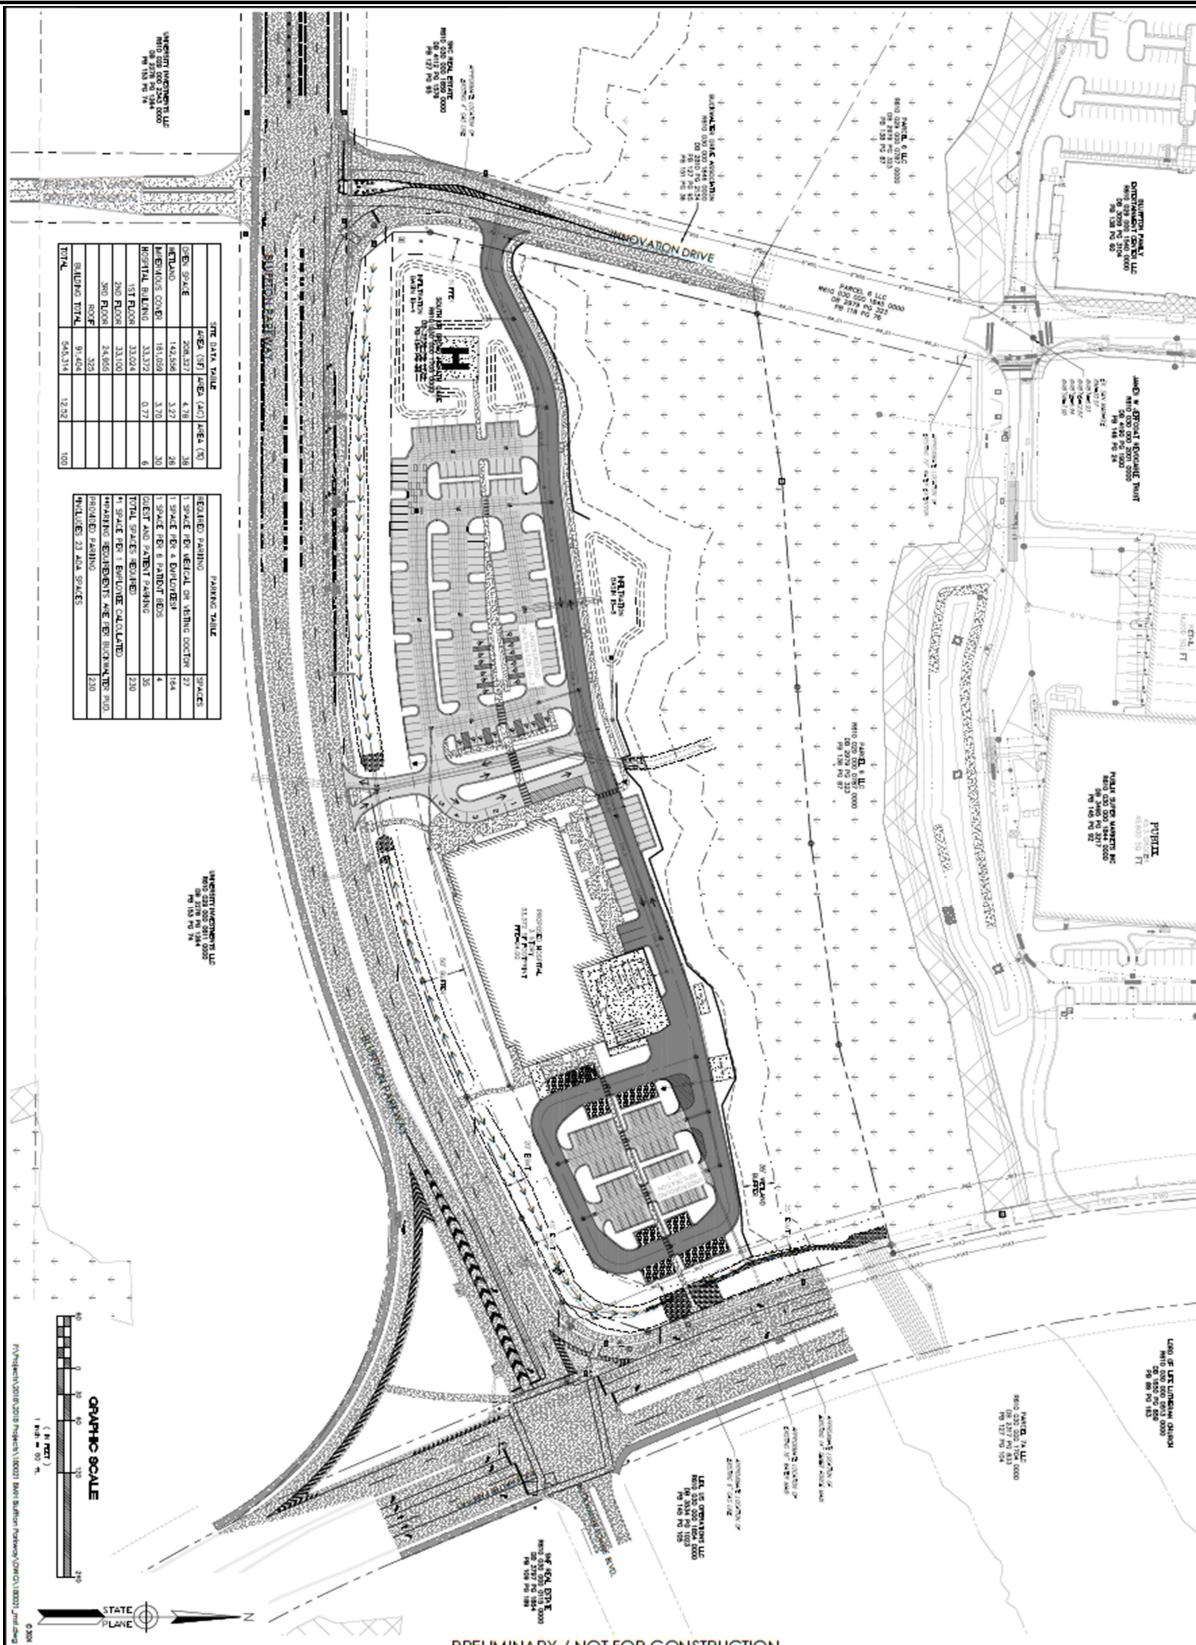

ATTACHMENT 5

ATTACHMENT 5

2 Project Traffic

2.1 Trip Generation

The trip generation rates and equations published in the Institute of Transportation Engineers' (ITE) *Trip Generation Manual, 11th Edition* were used to estimate the trip generation potential for the development. The analysis was performed using the information provided for land use code (LUC) 610 – Hospital (KSF).

The estimated trip generation for the Bluffton Community Hospital development is summarized in **Table 1**, which indicates that the development is anticipated to generate 186 trips (125 in/61 out) during the AM peak hour and 174 trips (61 in/113 out) during the PM peak hour.

Table 1 – Trip Generation Summary

Bluffton Community Hospital Trip Generation									
Land Use	Intensity	Units	Daily	AM Peak Hour			PM Peak Hour		
				Total	In	Out	Total	In	Out
610 - Hospital	91.0	KSF	3,950	186	125	61	174	61	113
Total Net New External Trips			3,950	186	125	61	174	61	113

Note: Trip generation was calculated using the following data:

610 - Hospital	ITE 610	=	$T = 5.29 * (X) + (3469.05); (50 \% \text{ In}; 50 \% \text{ Out})$
----------------	---------	---	---

AM Peak-Hour Traffic Generation

610 - Hospital	ITE 610	=	$LN(T) = 0.6 * LN(X) + (2.52); (67 \% \text{ In}; 33 \% \text{ Out})$
----------------	---------	---	---

PM Peak-Hour Traffic Generation

610 - Hospital	ITE 610	=	$LN(T) = 0.64 * LN(X) + (2.27); (35 \% \text{ In}; 65 \% \text{ Out})$
----------------	---------	---	--

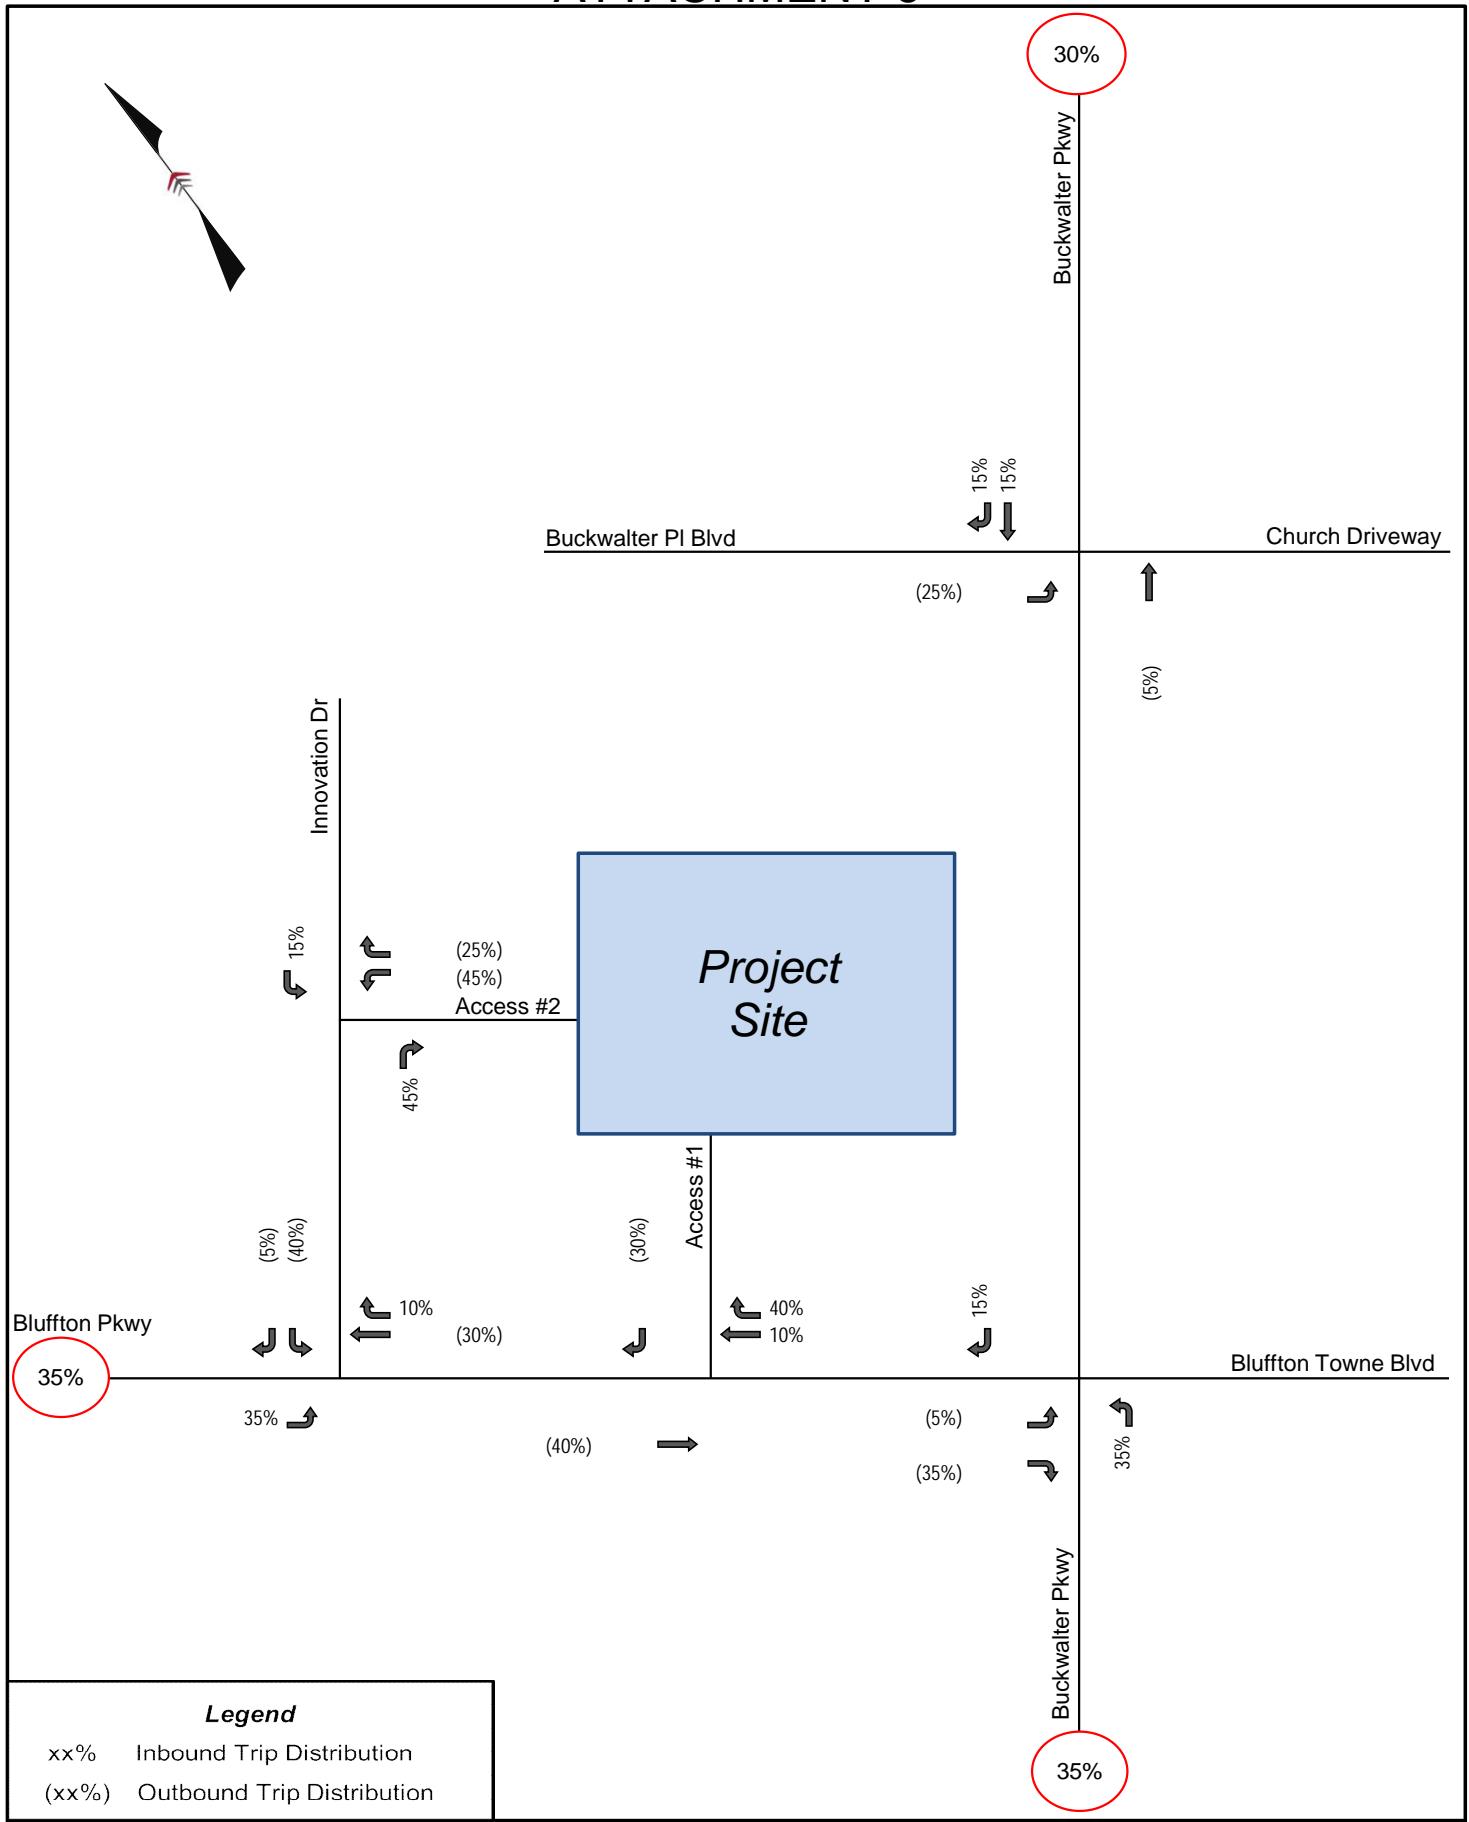

2.2 Trip Distribution & Assignment

New external trips generated by the proposed development were distributed and assigned to the surrounding roadway network based on existing travel patterns, surrounding land uses, and the proposed site layout. The trip distribution percentages used in this analysis are as follows.

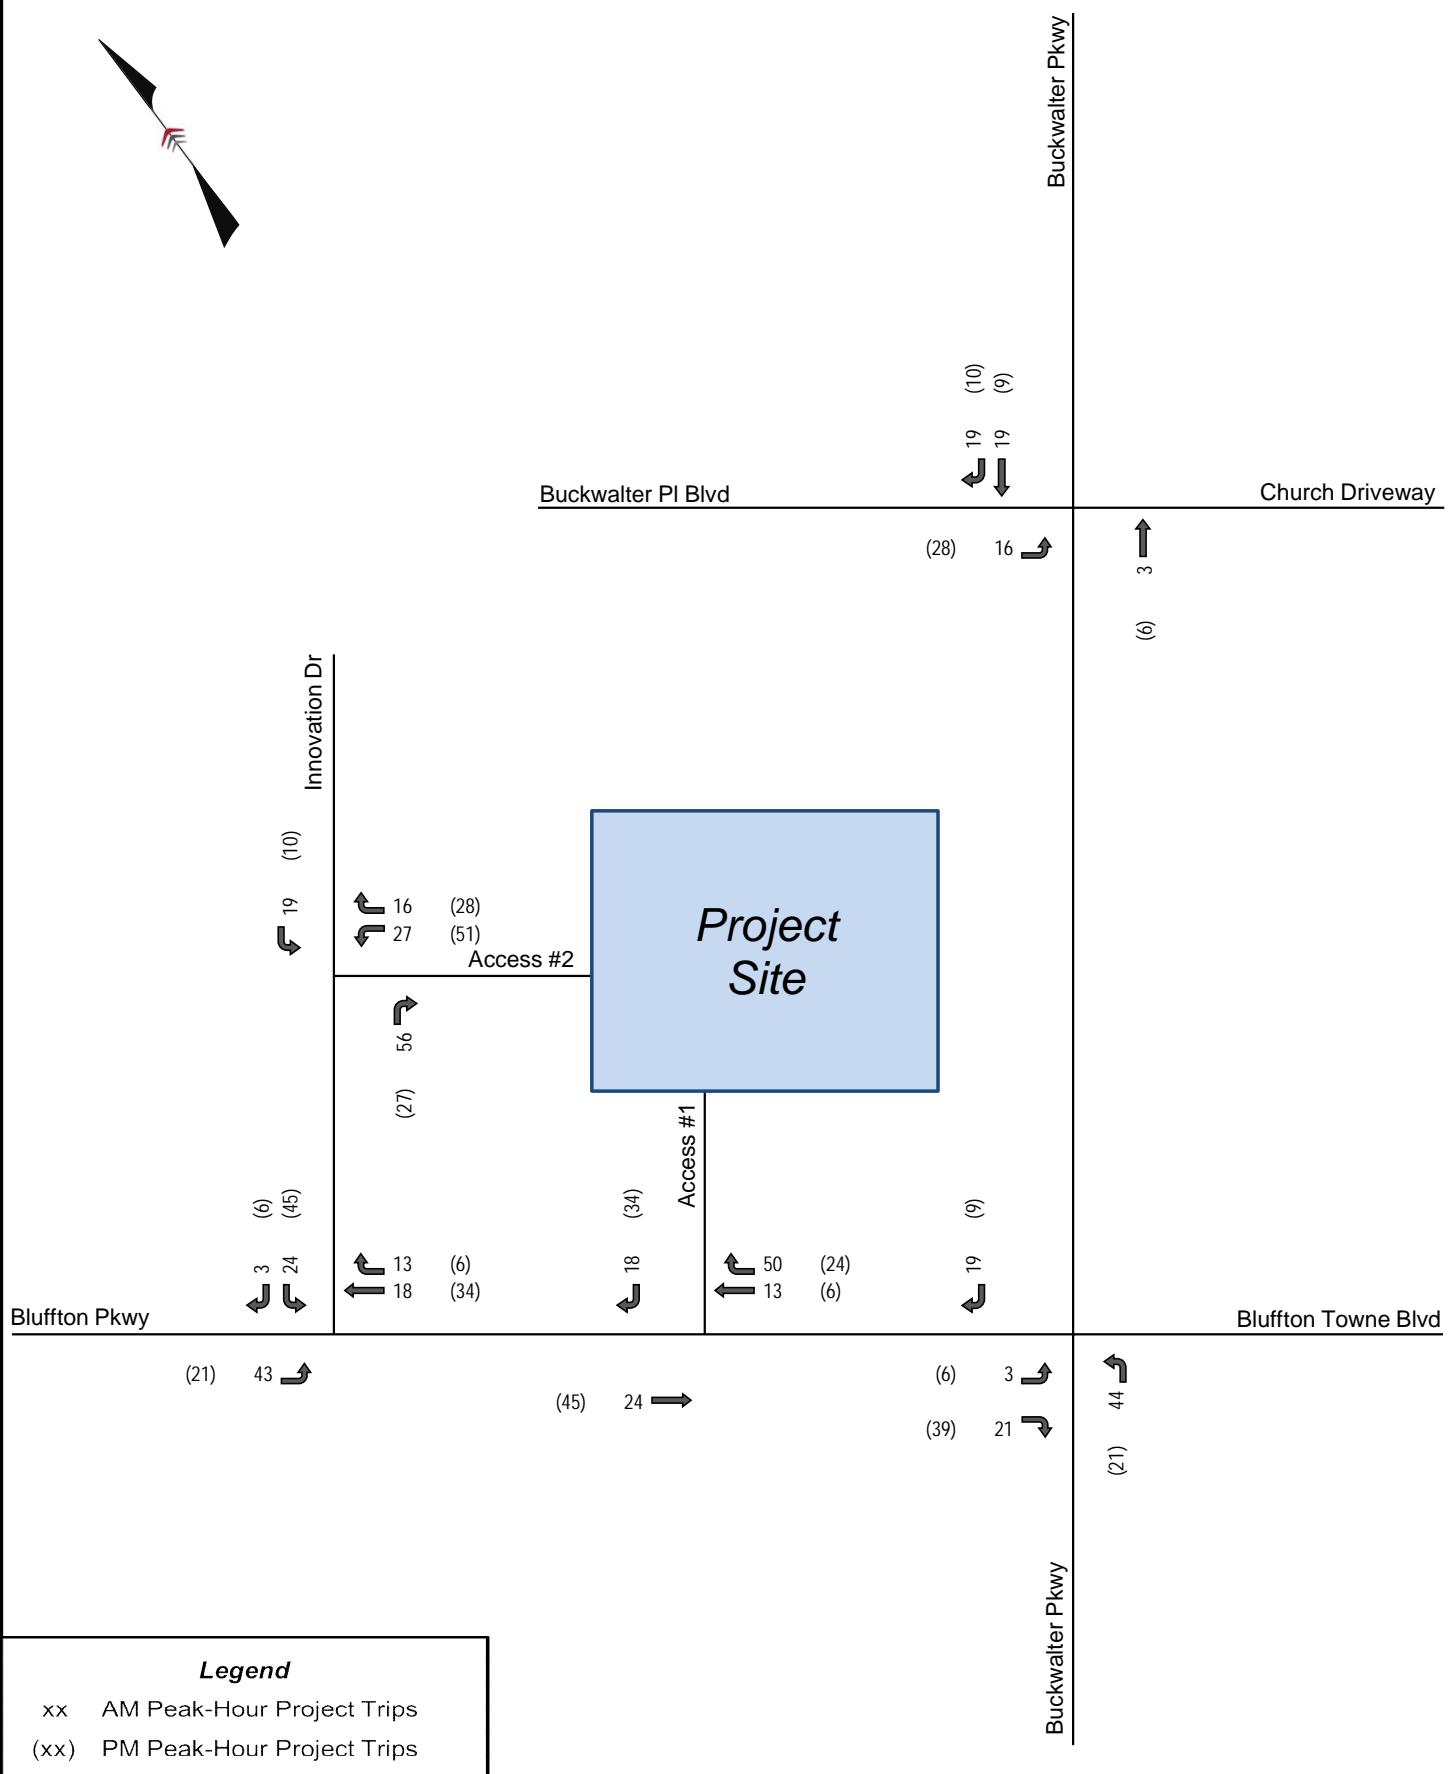

- 35% to/from the South via Buckwalter Parkway
 - 30% to/from the North via Buckwalter Parkway
 - 35% to/from the West via Bluffton Parkway

The site trip distribution and proposed new external trips are illustrated in **Figure 4** and **Figure 5**.

ATTACHMENT 5

ATTACHMENT 5

ATTACHMENT 5

3 Future Traffic Volume Development

The Existing 2024 traffic volumes were utilized in the analysis and future-year traffic volumes were developed for the projected 2027 traffic conditions. The future-year volumes consisted of the existing traffic volumes adjusted by an annual growth rate and the projected traffic volumes of the Bluffton Community Hospital development.

3.1 2024 Existing Traffic

Peak-hour intersection turning movement counts were conducted in a 13-hour peak period (7:00 AM to 6:00 PM), AM peak period (7:00 AM to 9:00 AM) and PM peak period (4:00 PM to 6:00 PM) on Tuesday, April 2nd, 2024 and Wednesday, May 15th, 2024.

Figure 6 illustrates the 2024 Existing Peak-Hour Traffic Volumes for the AM and PM peak hours. The raw turning-movement count data is included in **Appendix A**.

Worksheets documenting the traffic volume development are provided in **Appendix B**.

3.2 2027 No Build Traffic Development

It was assumed that the development will be built and fully occupied by 2027. The future-year traffic volumes consist of the 2024 Existing traffic volumes adjusted by a growth rate for the no-build scenarios.

The future-year traffic volumes consist of the 2024 Existing traffic volumes adjusted by a growth rate of 5% for the 2027 No Build conditions. To determine the historical growth rate in the area, traffic count data was obtained from SCDOT and includes count stations along Buckwalter Parkway and Bluffton Parkway. Historic growth rate calculations are provided in **Appendix C**.

In addition to the historical growth rate, the adjacent development traffic volumes of Bluffton Commons (*Bluffton Commons – Turn Lane and Preliminary Signal Warrant Analysis*, BIHL Engineering, 2018), Elle Apartments, Parkways Multifamily, Buckwalter MOB, and Cross Schools were included as part of the 2027 No Build AM and PM peaks. The AM and PM peak hour adjacent development volumes are illustrated in Error! Reference source not found..

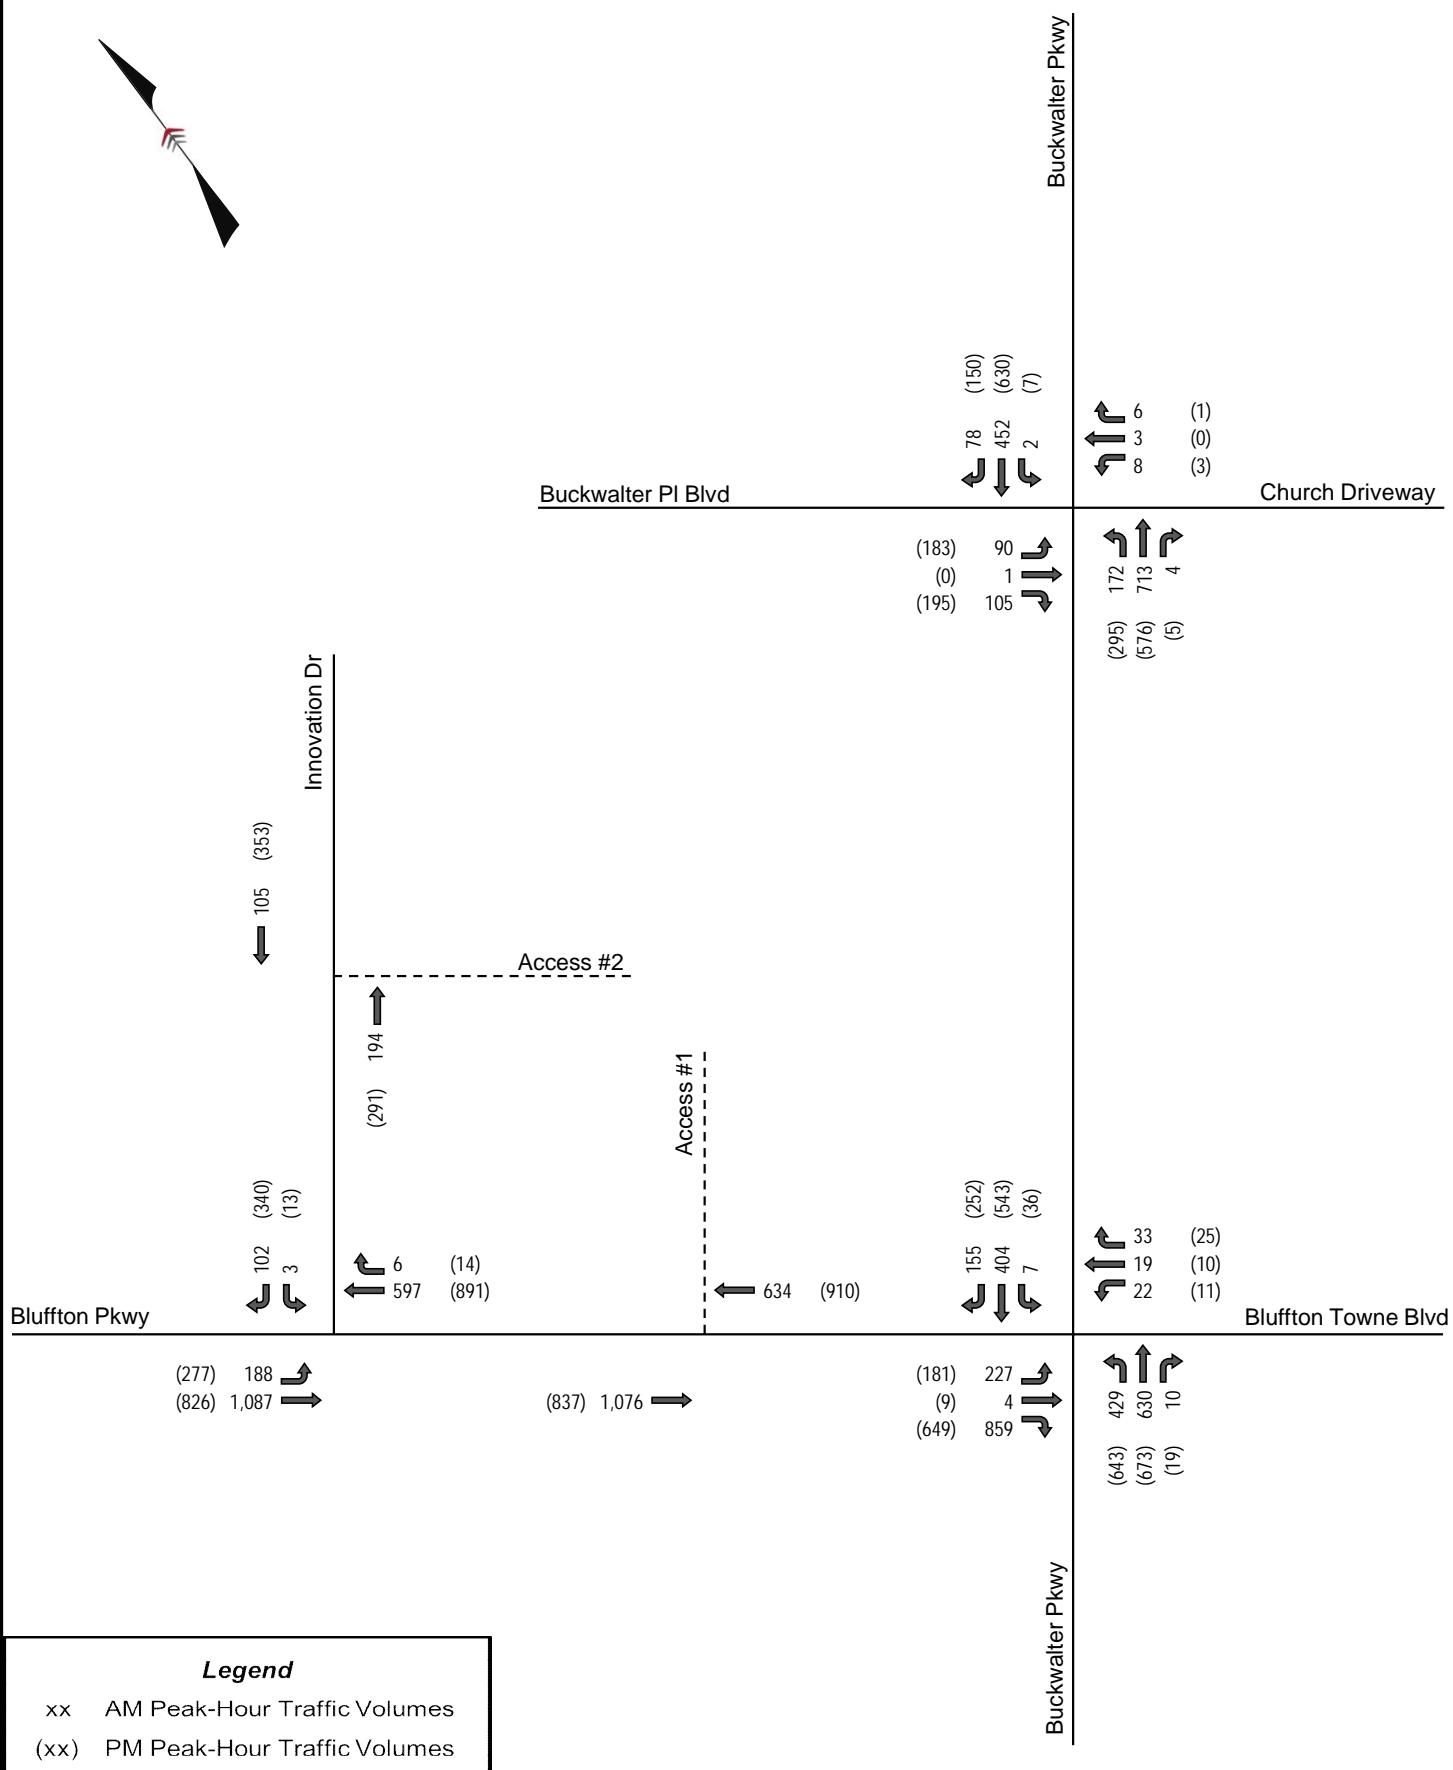

Please note, some of these projects have not been submitted to Beaufort County, however, Kimley-Horn is currently working on some of these TIAs and their respective trip generations and trip assignments were used in this TIA.

Figure 8 illustrates the 2027 No Build traffic volumes for the AM and PM peak hours.

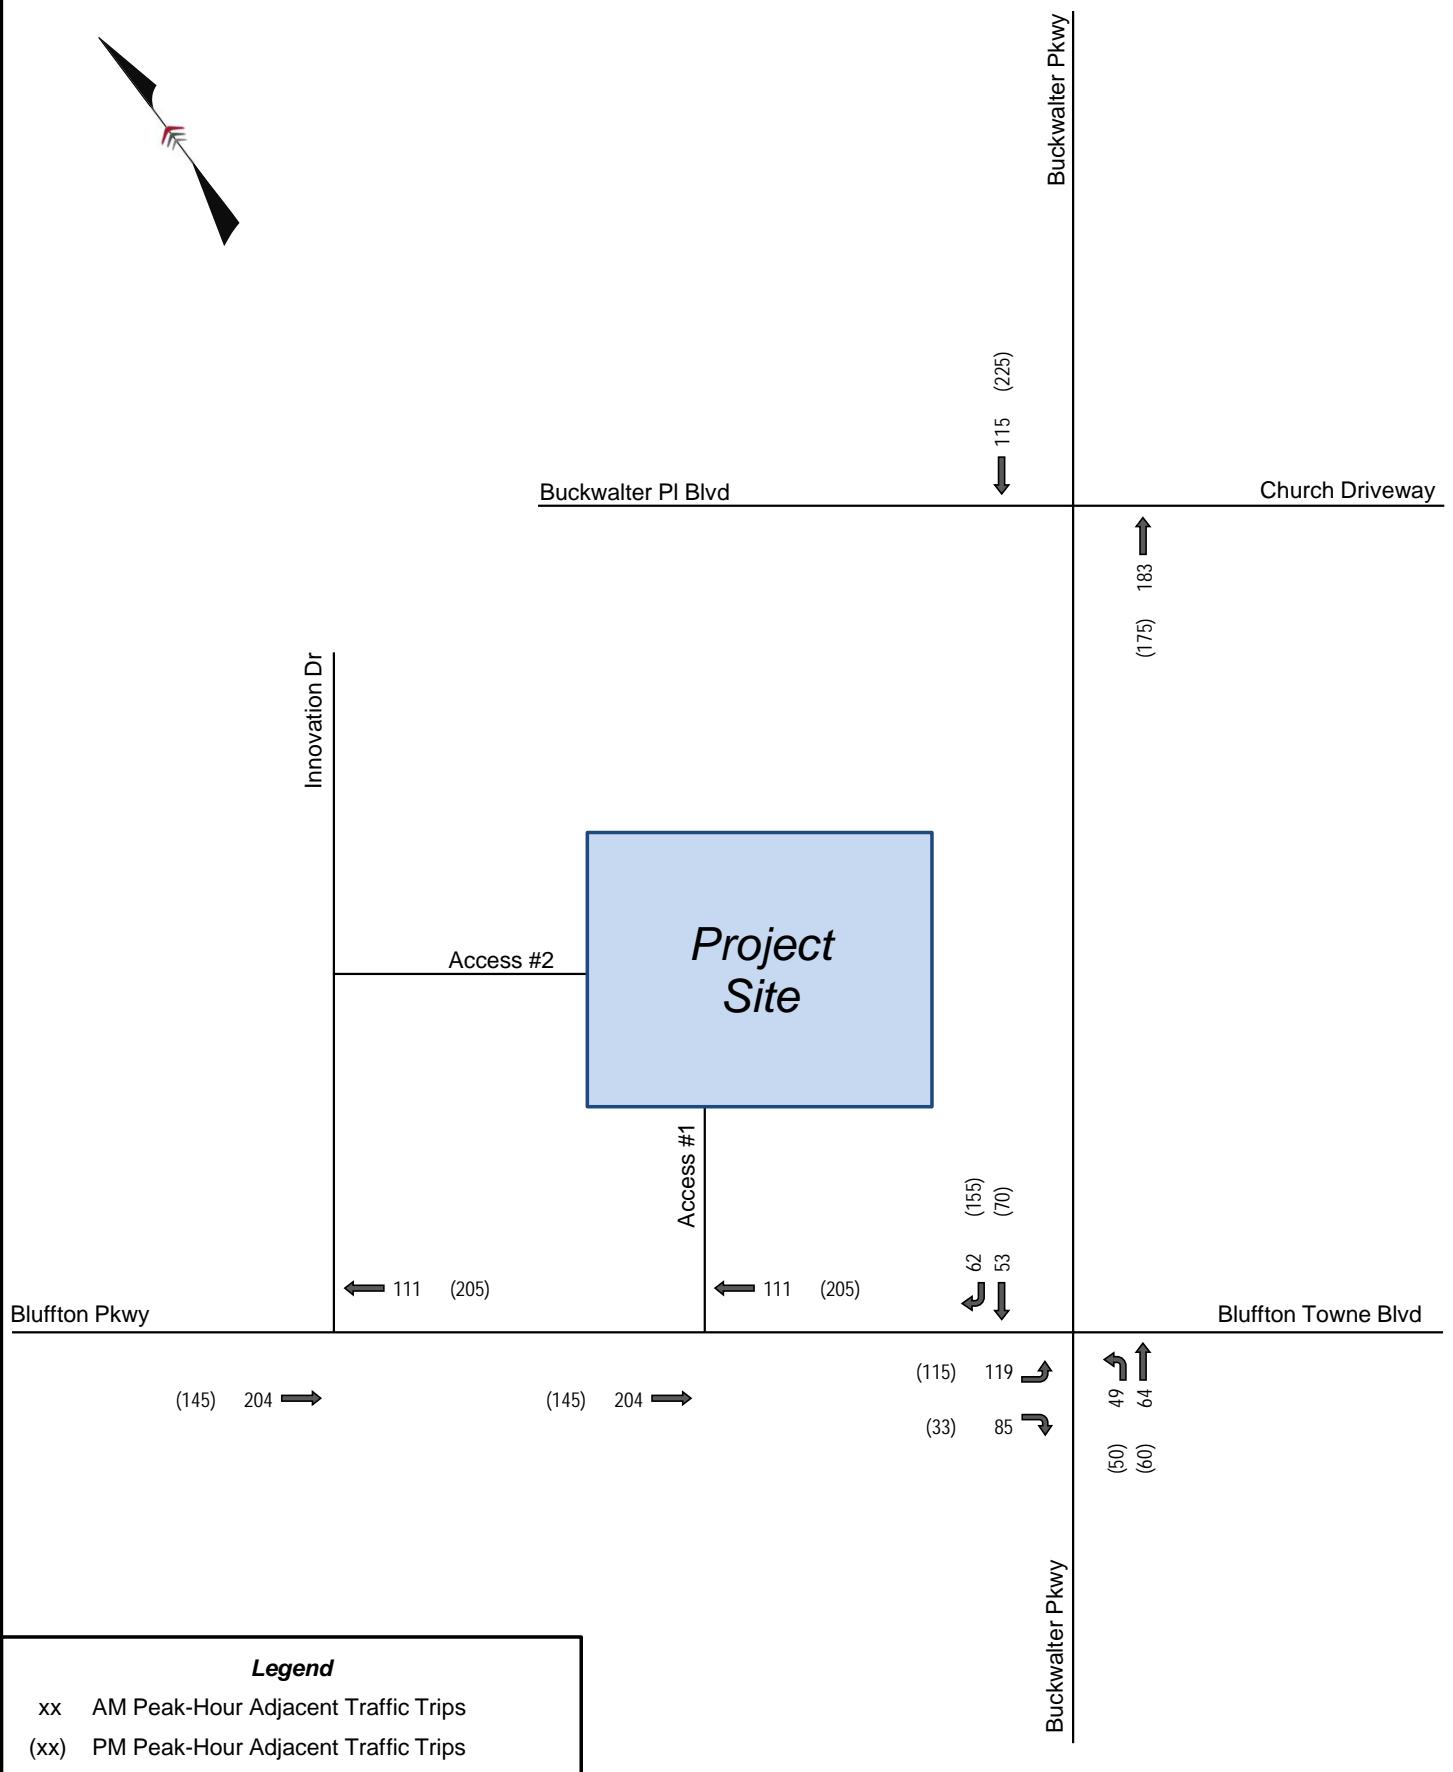

3.3 2027 Build Traffic Development

The Bluffton Community Hospital project traffic volumes were added to the no build traffic volumes to develop build traffic volumes for both horizon years. Error! Reference source not found. illustrates the 2027 build traffic volumes for the AM and PM peak hours.

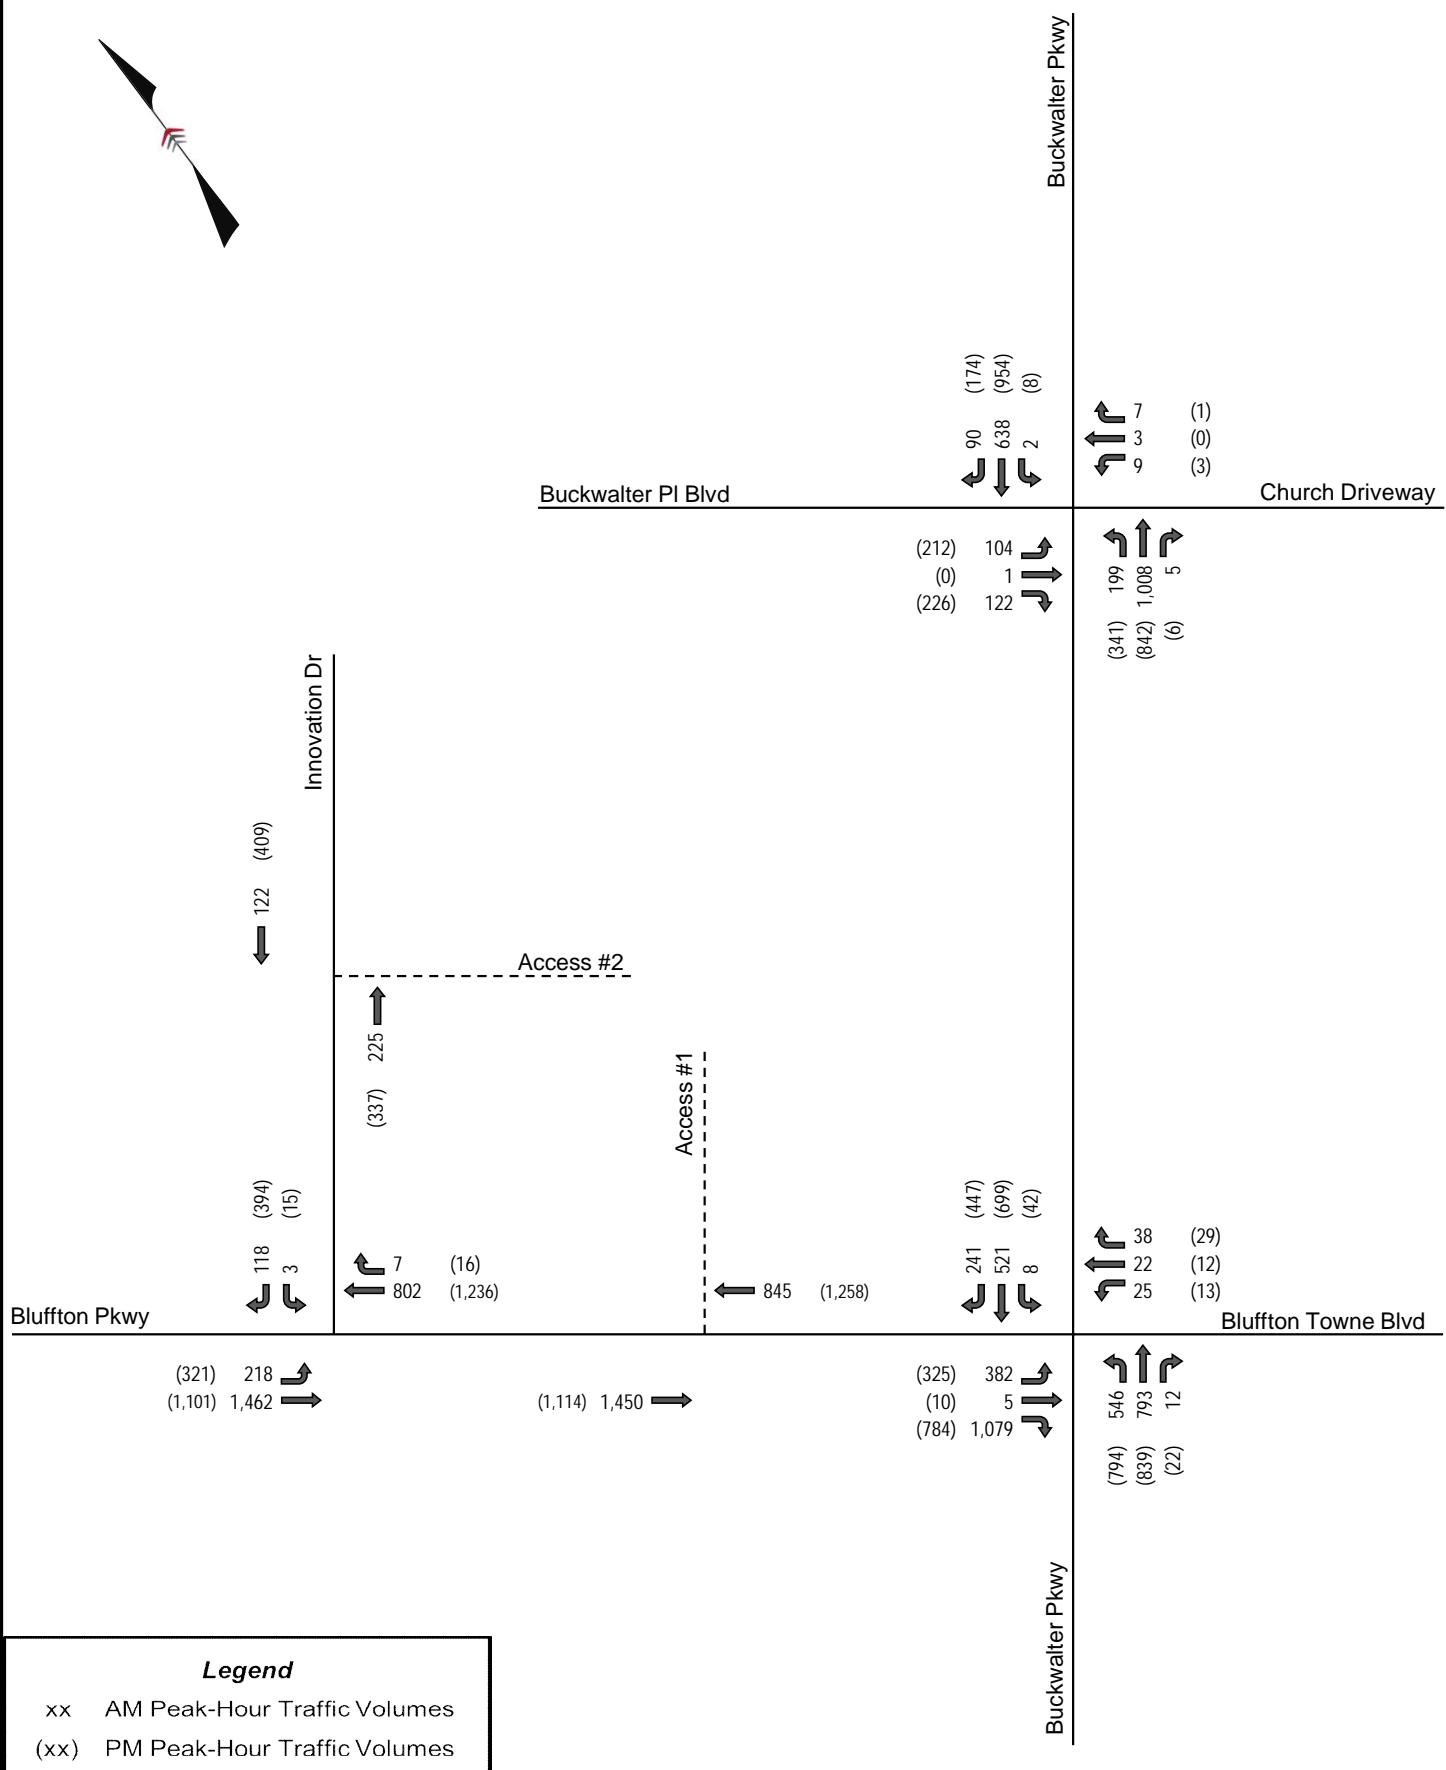

ATTACHMENT 5

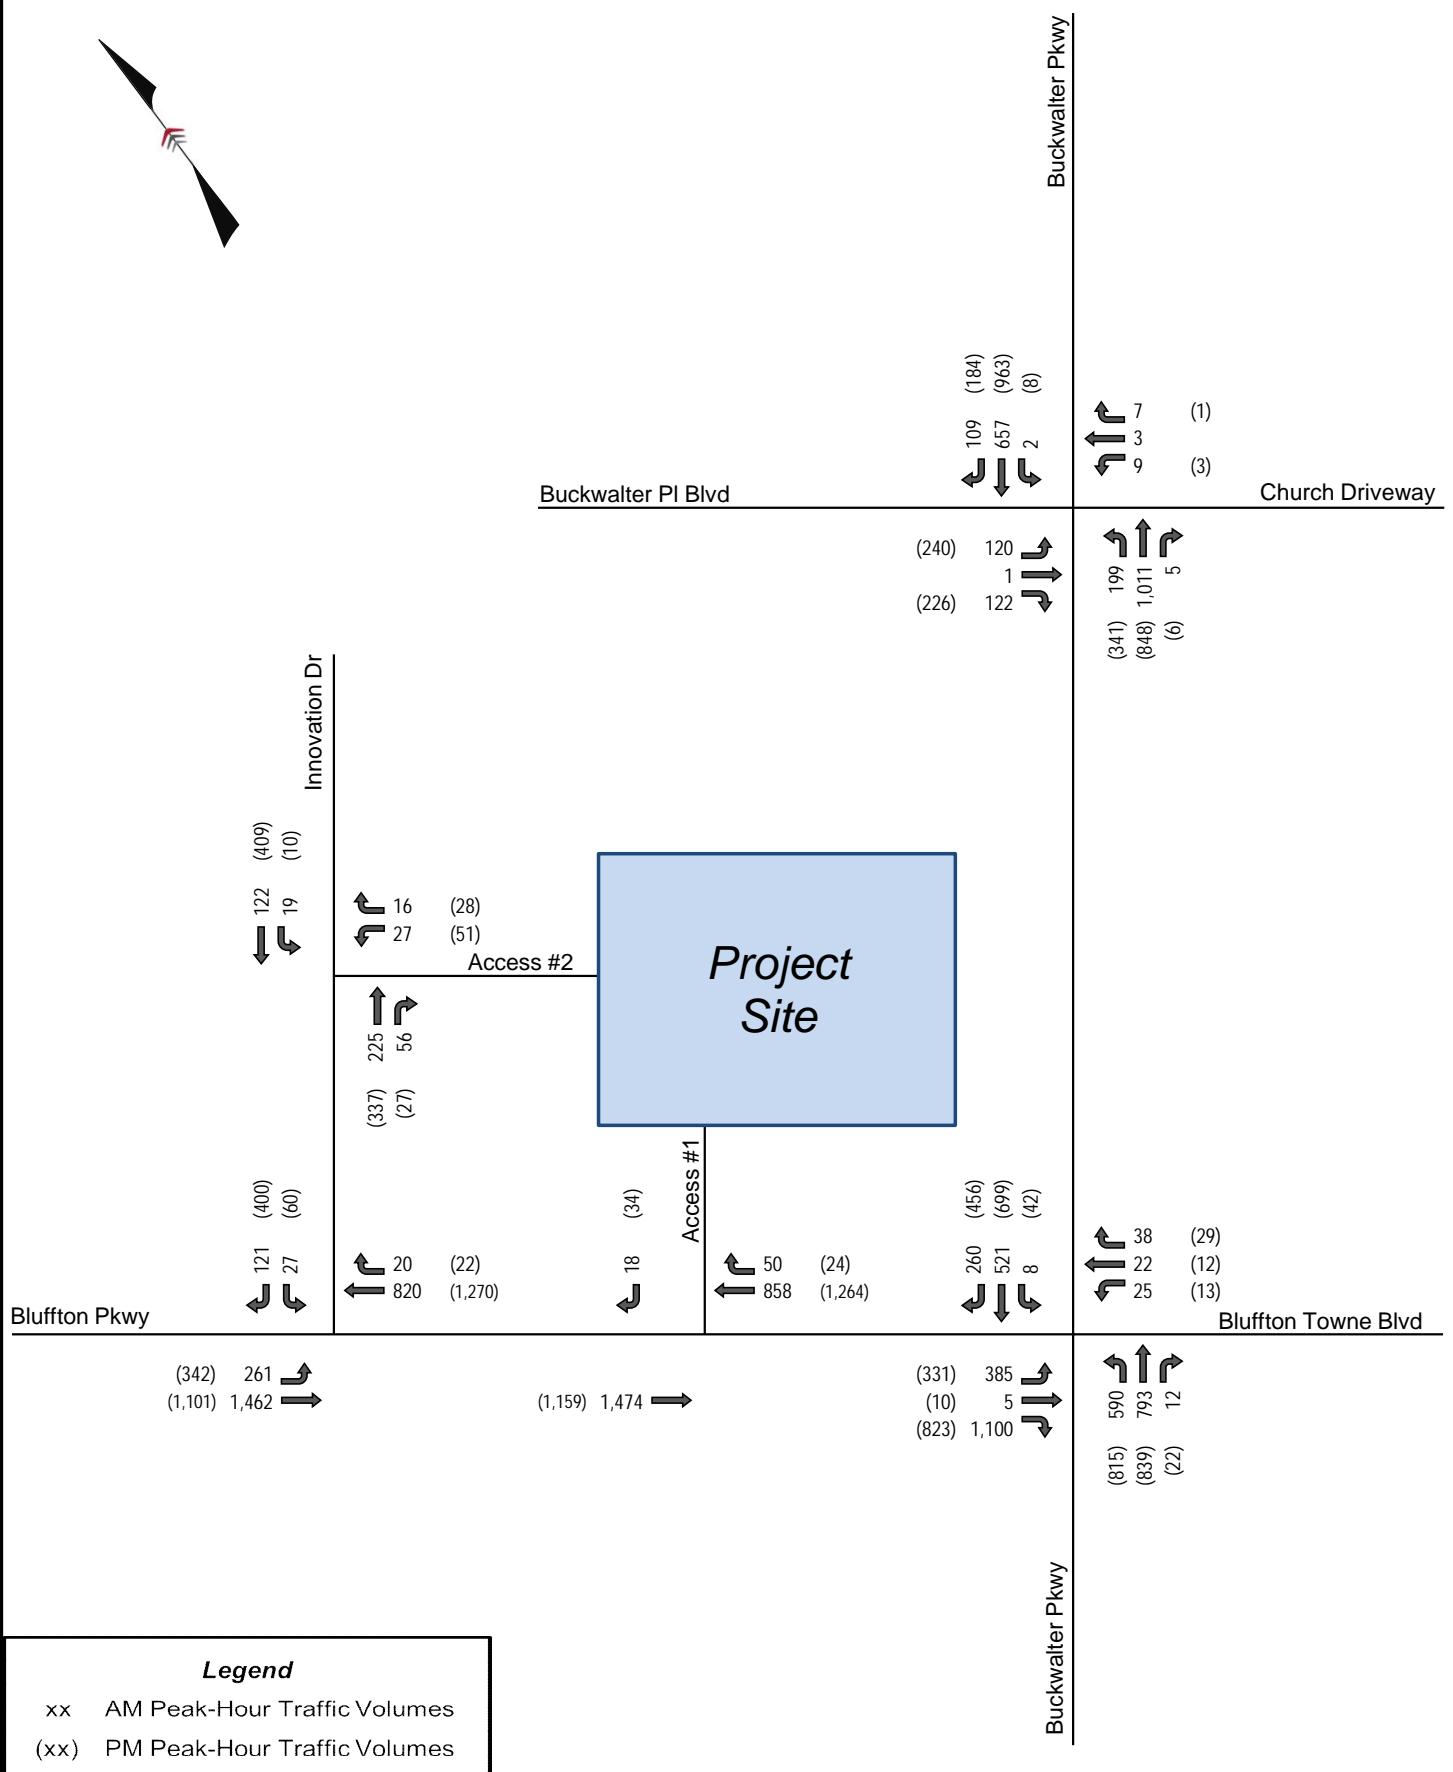

ATTACHMENT 5

ATTACHMENT 5

ATTACHMENT 5

4 Capacity Analysis

Capacity/level-of-Service (LOS) analyses were conducted using the *Highway Capacity Manual (HCM)*, 6th Edition, methodologies of the *Synchro*, Version 12, traffic analysis software. Capacity analyses were conducted for the AM and PM peak hours of the 2024 existing conditions, 2027 No Build conditions, and 2027 Build conditions analysis scenarios. Synchro lanes, volumes, and timings report were utilized to report 95th percentile queuing.

Intersection level of service (LOS) grades range from LOS A to LOS F, which are directly related to the level of control delay at the intersection and characterize the operational conditions of the intersection traffic flow. LOS A operations typically represent ideal, free-flow conditions where vehicles experience little to no delays, and LOS F operations typically represent poor, gridlocked conditions with high vehicular delays, and are generally considered undesirable. **Table 2** lists the LOS control delay thresholds published in the *HCM* for signalized and unsignalized intersections.

Table 2 – HCM Level of Service Criteria

LOS	Control Delay per Vehicle (sec/veh)	
	Signalized Intersections	Unsignalized Intersections
A	≤ 10	≤ 10
B	> 10 – 20	> 10 – 15
C	> 20 – 35	> 15 – 25
D	> 35 – 55	> 25 – 35
E	> 55 – 80	> 35 – 50
F	> 80	> 50

As part of the intersection analysis, SCDOT's default Synchro parameters were utilized. Existing peak-hour factors (PHF) were utilized for the existing scenarios and the PHFs for the future-year scenarios were adjusted to a minimum of 0.90 and maximum of 0.95. Existing heavy vehicle percentages were utilized for all scenarios, with a minimum of 2% considered.

Unsignalized intersections operating at LOS A-LOS C are considered to operate with short delays, unsignalized intersections operating at LOS D-LOS E are considered to operate with moderate delays, and intersections operating at LOS F are considered to operate with long delays.

It should be noted that traffic signal timings are anticipated to be adjusted with the increase in traffic volumes in the study network between 2024 Existing conditions and 2027 No Build conditions. Therefore, traffic signal timings were optimized under future conditions.

The following sections outline the results of the capacity analysis for each of the study intersections. The capacity analysis worksheets are included in **Appendix D**.

ATTACHMENT 5

4.1 Bluffton Parkway at Innovation Drive

Using the 13-hour count data collected and the anticipated new traffic generated by the proposed development, a traffic signal warrant analysis was performed for the intersection of Bluffton Parkway at Innovation Drive. The signal warrant analysis is based on requirements provided in Chapter 4C of the *2021 Manual on Uniform Traffic Control Devices* (MUTCD).

From the results of the traffic signal warrant analysis, it is recommended to install a signal at the intersection of Bluffton Parkway at Innovation Drive. It should be noted, this intersection is included within the *Bluffton Parkway Access Management Plan* and should be improved at the approval of the traffic signal. A traffic signal was modeled under 2027 Build Improve conditions.

The capacity analysis results for the Bluffton Parkway at Innovation Drive intersection are summarized in **Table 3**.

Table 3 – Bluffton Parkway at Innovation Drive Analysis Results

Condition	Measure	Bluffton Parkway at Innovation Drive LOS (Delay)						Intersection
		EBL	EBT	WBT	WBR	SBL	SBR

	Synchro 95th Q	145'	-	-	-	245'	365'	
2027 Build Improved	LOS (Delay)	B (13.7)		E (60.7)		C (22.2)		C (33.7)
	Synchro 95th Q	#207	143'	#464	13'	58'	213'	
	Existing Storage	255'			350'	95'		
\$ - Delay exceeds 300 seconds								

Based on the results presented in **Table 3**, the intersection of Bluffton Parkway at Innovation Drive is currently operating with long delays along the southbound approach during the PM peak hour. Under 2027 No-Build and 2027 Build conditions the southbound approach is anticipated to operate with long delays during the AM and PM peak hour.

ATTACHMENT 5

To mitigate the long delays on the minor street approaches, a traffic signal was taken into consideration as an improvement. With implementation of a traffic signal, the overall intersection is expected to operate at LOS A during the AM peak hour and LOS C during the PM peak hour.

The results of the signal warrant analysis indicate that the applicable criteria meet MUTCD warrants based on the projected 2027 Build condition traffic volumes for each analyzed scenario. Therefore, a traffic signal is recommended. When installed, it is recommended this intersection be coordinated with the adjacent signalized intersection of Buckwalter Parkway at Buckwalter Place Boulevard.

ATTACHMENT 5

4.2 Bluffton Parkway at Access #1

A turn-lane warrant analysis was conducted for the westbound right-turn movement under 2027 Build conditions. The results of the turn lane analysis indicate that a dedicated westbound right-turn lane along Bluffton Pkwy to the project site is not warranted and therefore, is not recommended to be constructed with the development. Worksheets documenting the turn lane warrant analyses are included in **Appendix F**.

The capacity analysis results for the Bluffton Parkway at Access #1 intersection are summarized in **Table 4**.

Table 4 – Bluffton Parkway at Access #1 Analysis Results

Bluffton Parkway at Access #1 LOS (Delay)		
Condition	Measure	SB (Access #1)
		SBR
AM Peak Hour	LOS (Delay)	B (12.3)
	Synchro 95th Q	3'
PM Peak Hour	LOS (Delay)	C (15.7)
	Synchro 95th Q	8'

Based on the results presented in **Table 4**, the intersection of Bluffton Parkway at Access #1 is anticipated to operate under 2027 Build conditions at LOS B during the AM peak hour and LOS C during the PM peak hour. Therefore, no capacity improvements are recommended at this intersection.

ATTACHMENT 5

4.3 Innovation Drive at Access #2

The capacity analysis results for the Innovation Drive at Access #2 intersection are summarized in **Table 5**.

Table 5 – Innovation Dr at Access #2 Analysis Results

Innovation Drive at Access #2 LOS (Delay)

					75'			225'		200'	175'		200'	

Based on the results presented in **Table 6**, the intersection of Buckwalter Parkway at Bluffton Parkway is anticipated to maintain no build operations with the addition of project traffic. 2027 Build conditions at LOS C during the AM peak hour and LOS D during the PM peak hour. A SIM Traffic queuing analysis was performed, and no significant queuing is anticipated at the intersection of Buckwalter Parkway at Bluffton Parkway. The turn-lane storages at all approaches are expected to accommodate the turning movement volumes and therefore, no capacity improvements are recommended at this intersection.

ATTACHMENT 5

4.5 Buckwalter Parkway at Buckwalter Place Boulevard

	Existing Storage						225'		225'	250'		225'

Based on the results presented in **Table 7**, the intersection of Buckwalter Parkway at Buckwalter Place Boulevard is anticipated to operate under 2027 Build conditions at LOS B during the AM and PM peak hours. Therefore, no capacity improvements are recommended at this intersection.

ATTACHMENT 5

5 Conclusion

A traffic impact study was prepared for the Bluffton Community Hospital development. The proposed development is located west of the Bluffton Parkway at Buckwalter Parkway intersection and is proposed to consist of a 91,000 SF hospital. It is assumed that the project will access the roadway network via a right-in right-out (RIRO) driveway on Bluffton Parkway and a full-access driveway on Innovation Drive.

It was assumed that the development will be built and fully occupied by 2027. This study summarizes the results of the traffic analyses at the following five study intersections.

- 1) Innovation Drive at Bluffton Parkway
- 2) Bluffton Parkway at Access #1
- 3) Innovation Drive at Access #2
- 4) Bluffton Parkway at Buckwalter Parkway
- 5) Buckwalter Place Boulevard at Buckwalter Parkway

The results of the traffic analyses indicate the following improvements are recommended to mitigate the deficient LOS conditions in the study area.

Innovation Drive at Bluffton Parkway

- Install a traffic signal based on the traffic signal warrant analysis.
 - Note: A traffic signal is shown at the intersection of Innovation Drive at Bluffton Parkway in the *Bluffton Parkway Access Management Plan*.

Bluffton Parkway at Access #1

- No capacity improvements are recommended at this intersection.

Innovation Drive at Access #2

- No capacity improvements are recommended at this intersection.

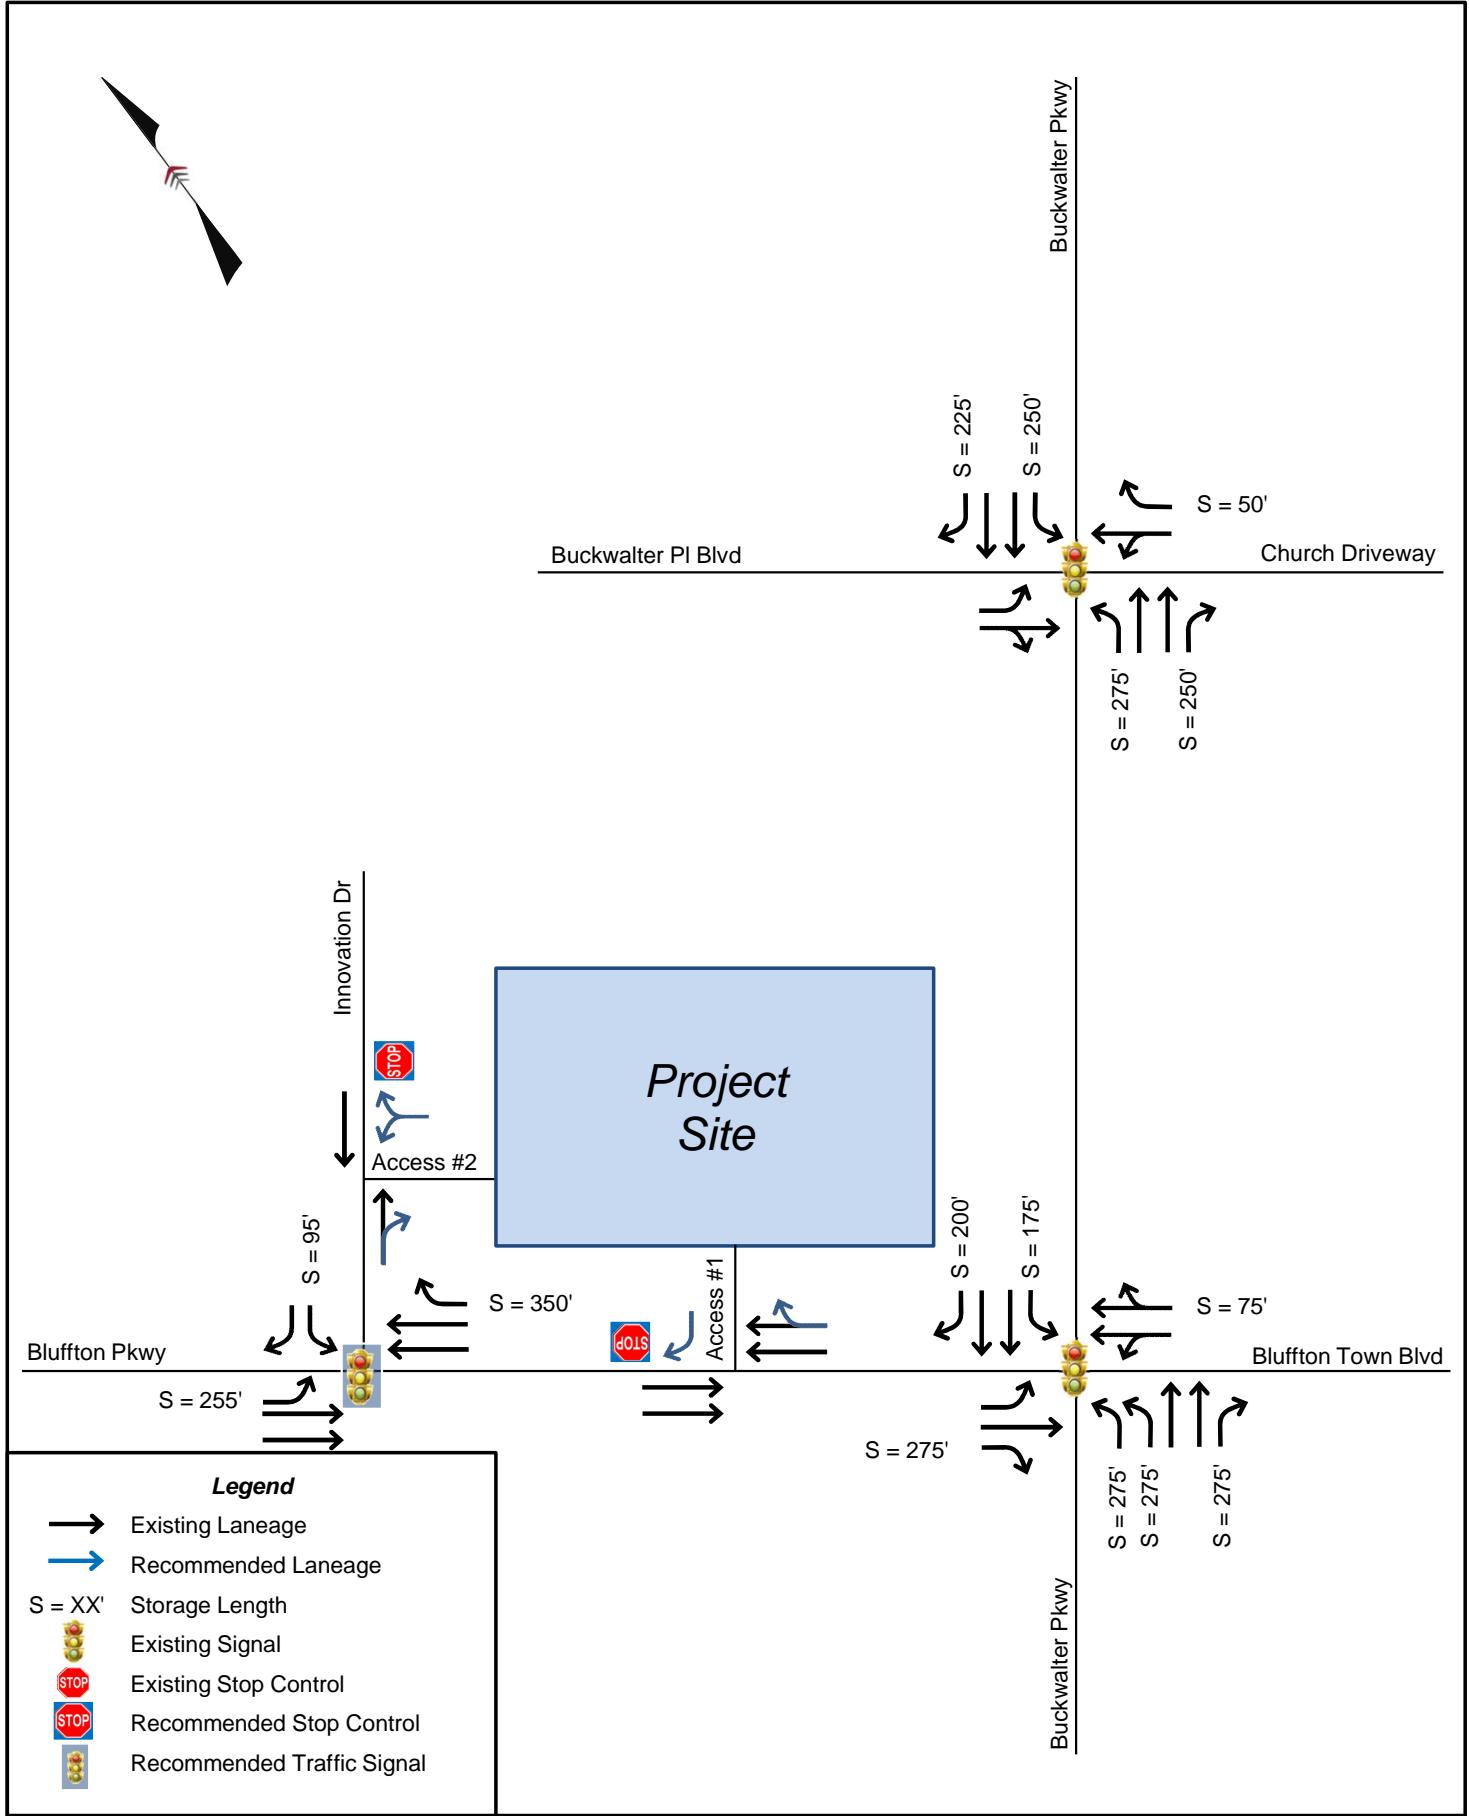

Bluffton Parkway at Buckwalter Parkway

- No capacity improvements are recommended at this intersection.

Buckwalter Place Boulevard at Buckwalter Parkway

- No capacity improvements are recommended at this intersection.

Intersection Summary

Area Type: Other

Cycle Length: 90

Actuated Cycle Length: 90

Natural Cycle: 90

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 1.06

Intersection Signal Delay (s/veh): 41.9

Intersection LOS: D

Intersection Capacity Utilization 93.3%

ICU Level of Service F

Analysis Period (min) 15

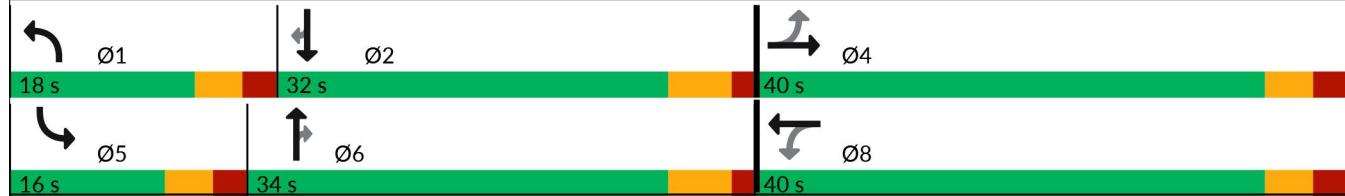

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 4: Buckwalter Pkwy & Bluffton Pkwy N./Buckwalter Towne Blvd.

Intersection Summary

Area Type: Other

Cycle Length: 150

Actuated Cycle Length: 150

Natural Cycle: 150

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 1.08

Intersection Signal Delay (s/veh): 61.6

Intersection LOS: E

Intersection Capacity Utilization 111.5%

ICU Level of Service H

Analysis Period (min) 15

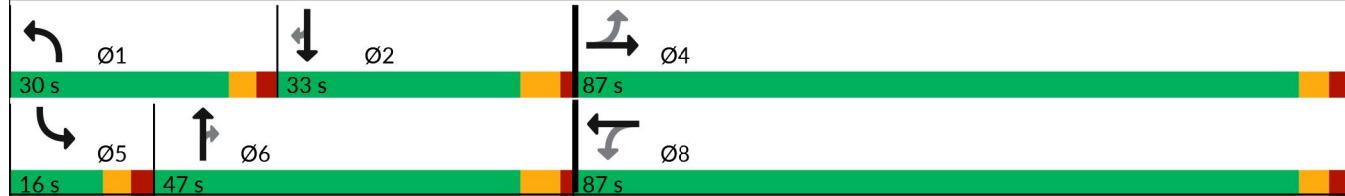

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 4: Buckwalter Pkwy & Bluffton Pkwy N./Buckwalter Towne Blvd.

Intersection Summary

Area Type: Other

Cycle Length: 150

Actuated Cycle Length: 150

Natural Cycle: 150

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 1.09

Intersection Signal Delay (s/veh): 65.0

Intersection LOS: E

Intersection Capacity Utilization 113.8%

ICU Level of Service H

Analysis Period (min) 15

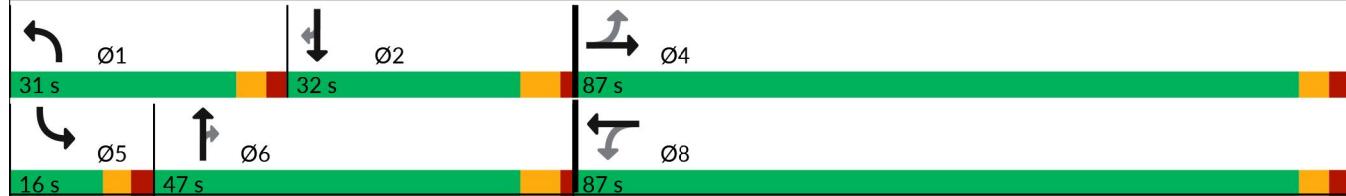

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 4: Buckwalter Pkwy & Bluffton Pkwy N./Buckwalter Towne Blvd.

ATTACHMENT 5

9.5-2

INTERSECTIONS

March 2017

Note: For highways with a design speed below 50 miles per hour with a DHV < 300 and where right turns > 40, an adjustment should be used. To read the vertical axis of the chart, subtract 20 from the actual number of right turns.

Example

Given: Design Speed = 35 miles per hour
 DHV = 250 vehicles per hour
 Right Turns = 100 vehicles per hour

Problem: Determine if a right-turn lane is necessary.

Solution: To read the vertical axis, use $100 - 20 = 80$ vehicles per hour. The figure indicates that a right-turn lane is not necessary, unless other factors (e.g., high crash rate) indicate a lane is needed.
