**RE: Traffic Impact Assessment  
Proposed Hotel  
Parcel #111-1, Gooding Avenue  
Bristol, Rhode Island 02809  
Project Number: 23103601**

Dear Dennis,

Solli Engineering, LLC has prepared this assessment to provide an analysis of the potential traffic impacts associated with the proposed 80-room hotel located along Gooding Avenue in Bristol, Rhode Island. The evaluation has been completed in accordance with the Town of Bristol and Rhode Island Department of Transportation requirements as well as standard traffic engineering methodology. Our investigation concludes that the proposed development will not have an adverse impact on the existing roadway network.

#### **Project Description:**

The property is located along Gooding Avenue between Broadcommon Road and Metacom Avenue (Route 136). The site is currently undeveloped and bound by Gooding Avenue to the north, undeveloped land to the south and east, and residential parcels to the west. The parcel is located within the General Business (GB) zoning district in the Town of Bristol. Refer to Figure 1, Site Location Map, for additional information regarding the project location.

The project proposes to construct a 80-unit hotel with appurtenant parking, loading, landscape, utility, and drainage features. Access to the site is proposed along Gooding Avenue via one full-movement STOP-controlled site driveway. Refer to the Site Layout Plan, prepared by DiPrete Engineering and included as a supporting document to this assessment, for additional information regarding the proposed site configuration.

#### **Existing Conditions:**

Gooding Avenue is an east-west roadway classified by the Rhode Island Department of Transportation as a minor arterial roadway with a posted speed limit of 35 miles per hour. Gooding Avenue is generally a two-lane, bi-directional roadway with 12-foot lanes and 6-foot shoulders. At the intersection of Metacom Avenue (Route 136) & Gooding Avenue / Narrows Road, Gooding Avenue forms the eastbound approach to the intersection and widens to provide dedicated left-, through, and right- turn lanes. Gooding Avenue provides access to commercial and industrial parcels. Concrete sidewalks are located along the northern edge of Gooding Avenue in its entirety.

**501 Main Street, Suite 2A  
Monroe, CT 06468  
Office: (203) 880-5455**

[www.SolliEngineering.com](http://www.SolliEngineering.com)

**11 Vanderbilt Avenue, Suite 240  
Norwood, MA 02062  
Office: (781) 352-8491**

Metacom Avenue (Route 136) is a north-south roadway classified by the Rhode Island Department of Transportation as a principal arterial roadway with a posted speed limit of 40 miles per hour. Metacom Avenue (Route 136) is generally a two-lane bi-directional roadway with a shared two-way-left-turn-lane, with various additional turn lanes at intersections. Metacom Avenue (Route 136) generally consists of 11 foot lanes and 4 foot shoulders. Metacom Avenue (Route 136) provides access to various commercial and residential parcels along the corridor. At the intersection of Metacom Avenue (Route 136) & Gooding Avenue / Narrows Road, Metacom Avenue (Route 136) forms the northbound and southbound approached of the intersection, with dedicated left-, through, and right- turn lanes at the southbound approach and a dedicated left-turn lane at the northbound approach. Sidewalks are provided along both sides of Metacom Avenue (Route 136) in the vicinity of the project site.

Narrows Road is an east-west roadway classified by the Rhode Island Department of Transportation as a major collector roadway with a posted speed limit of 25 miles per hour. Narrows Road is generally a two-lane bi-directional roadway with 11-foot lanes and 2-foot shoulders. At the intersection of Metacom Avenue (Route 136) & Gooding Avenue / Narrows Road, Narrows Road forms the westbound approach to the intersection and widens to provide dedicated left-, through, and right- turn lanes. Sidewalks are provided along both sides of Narrows Road in the vicinity of the project site.

The most recent three full years of accident data (January 2020 – December 2022) was obtained from the Bristol Police Department Records Division for the study area intersections and intermediate roadway segments. There was a total of forty-eight (48) crashes at the intersection of Gooding Avenue & Metacom Avenue (Route 136) over the three-year period, with an average of 16 crashes per year at this intersection. There was a total of thirteen (13) crashes identified along Gooding Avenue from its intersection with Broadcommon Road to its intersection with Metacom Avenue (Route 136) over the three-year period, with an average of 4.33 crashes per year. Overall, the quantity of crashes relative to the existing volumes on the arterial roadways in the study area network is low and does not indicate crash patterns or deficiencies in the roadway network that require mitigation. A letter from the Bristol Police Department Records Division confirming accident quantities in the study area is included as a supporting document to this assessment.

Turning movement count data was collected in April 2023 for the weekday AM and weekday PM peak hours, as these are the periods with the greatest potential impact on the adjacent roadways. The 2023 existing peak hour volumes for the weekday AM and weekday PM peak hours are illustrated in Figure 2. The raw turning movement count data is included as a supporting document to this assessment.

Volume and speed data were collected in April 2023 along Gooding Avenue in the vicinity of the proposed site driveway using an Automatic Traffic Recorder (ATR). The 2023 bi-directional ADT along Gooding Avenue was reported as 9,476 vehicles. The 85<sup>th</sup> percentile speed observed along Gooding Avenue was reported as 42.39 miles per hour eastbound and 35.96 miles per hour westbound. The raw ATR data is included as a supporting document to this assessment.

### **Proposed Conditions:**

The project proposes to construct a 80-unit hotel with appurtenant parking, loading, landscape, utility, and drainage features. Access to the site is proposed along Gooding Avenue via one full-movement STOP-controlled site driveway.

Intersection sight distance (ISD) at the proposed site driveway was reviewed and evaluated per guidance provided in the 2008 edition of the RIDOT Highway Design Manual. The 85<sup>th</sup> percentile speed traveling westbound was recorded as 35.95 mph therefore the intersection sight distance looking right was based on a design speed of 40 mph (posted speed limit plus 5 mph) to provide a conservative analysis. The required sight distance looking right from the proposed driveway is 445 feet and the required sight distance looking left from the proposed driveway is 470 feet based on the 85<sup>th</sup> percentile speed of 42.39 miles per hour. The proposed site driveway has been designed to satisfy the required sight distances looking left

and right. Refer to the Intersection Sight Distance Figure, Figure ISD, for additional information regarding intersection sight distance.

To evaluate the potential traffic impact associated with the proposed development, the anticipated trips to be generated by the proposed land use was estimated using data from the Institute of Transportation Engineers (ITE) Trip Generation, 11<sup>th</sup> Edition. The trip generation was calculated for the weekday AM and weekday PM peak hours based on the proposed Hotel (Land Use Code 310) land use with an independent variable of hotel rooms, as these are the peak periods with the greatest potential for impact on the adjacent street traffic. The proposed development is anticipated to generate 37 (21 entering, 16 exiting) trips during the weekday AM peak hour and 48 (24 entering, 24 exiting) trips during the weekday PM peak hour. The trip generation rate sheets are provided as a supporting document to this assessment. A detailed breakdown of the proposed trip generation calculations is provided as a supporting document to this assessment. Table 1 below summarizes the anticipated trip generation for the proposed development.

**TABLE 1  
TRIP GENERATION SUMMARY**

| <b>LAND USE</b>               | <b>WEEKDAY AM PEAK HOUR</b> |             |              | <b>WEEKDAY PM PEAK HOUR</b> |             |              |
|-------------------------------|-----------------------------|-------------|--------------|-----------------------------|-------------|--------------|
|                               | <b>ENTER</b>                | <b>EXIT</b> | <b>TOTAL</b> | <b>ENTER</b>                | <b>EXIT</b> | <b>TOTAL</b> |
| Hotel - LUC 310<br>(80 Rooms) | 21                          | 16          | 37           | 24                          | 24          | 48           |
| <b>Total New Trips</b>        | <b>21</b>                   | <b>16</b>   | <b>37</b>    | <b>24</b>                   | <b>24</b>   | <b>48</b>    |

The anticipated distribution of new traffic entering and exiting the site was developed based on area populations, existing traffic patterns, and the layout of the adjacent roadway network. The following distributions were applied to the new site generated trips:

- 25% to/from the north via Metacom Avenue (Route 136)
- 25% to/from the south via Metacom Avenue (Route 136)
- 50% to/from the west via Gooding Avenue

The anticipated percent distribution of the new site generated trips is illustrated in Figure 3. The new site generated trips were assigned based on the anticipated percent distributions illustrated in Figure 3 and the resulting trip assignment is illustrated in Figure 4.

As the proposed development is anticipated to be opened in 2025, background traffic growth is estimated to account for any traffic increase as a result of regional population growth. Based on Census data provided by the United States Census Bureau, there has been a minor decrease in population in the Town of Bristol in recent years. The population reported in the 2010 census was 22,954 people, while the population reported in the 202 census was 22,493 people. As a result, the existing traffic volumes were projected to the 2025 design year using a conservative 1.0 percent per year growth factor to establish the 2025 background traffic volumes. The 2025 background traffic volumes are illustrated in Figure 5. Census data provided by the United States Census Bureau is included as a supporting document to this assessment.

The trip assignment volumes illustrated in Figure 4 were combined with the 2025 background volumes in Figure 5 to develop the build traffic volumes. Figure 6 illustrates the 2025 build traffic volumes.

The Town of Bristol was contacted to identify any ongoing or proposed projects within the study area which may impact the analysis. No projects were identified which may impact the analysis.

## Capacity Analysis:

To determine the operating conditions of the site driveway after the development has been constructed, the study area intersections were analyzed using the Synchro 11 capacity analysis software for the existing, background, and build peak hour conditions during the weekday AM and weekday PM peak hours, as these peak periods have the greatest potential for impact by the proposed development.

The results of the Synchro analysis describe the traffic impact in terms of Level of Service (LOS). LOS describes the operational condition of the signalized intersection in terms of delay (in seconds per vehicle) and is expressed on a scale of A through F with LOS A being the best and LOS F being the worst. LOS A reflects intersection operations with little to no vehicle delay (less than 10 seconds per vehicle) and LOS F reflects intersection conditions that are over capacity and experience long delays (more than 50 seconds of delay per vehicle at unsignalized intersections or 80 seconds of delay at signalized intersections). For unsignalized intersections, only the delay on the STOP-controlled approach is reported. Table 2 below summarizes the level of service for the study area intersections during the existing, background, and build conditions of the weekday AM and weekday PM peak hours. A detailed capacity analysis summary as well as Synchro 11 capacity analysis reports are included as supporting documents to this assessment.

**TABLE 2**  
**WEEKDAY CAPACITY ANALYSIS SUMMARY**  
**(LOS/DELAY)**

| INTERSECTION   | 2023 Existing<br>AM/PM | 2025 Background<br>AM/PM | 2025 Build<br>AM/PM |

| Gooding Avenue & Site Driveway*                            |                        |                          |                     |
| Site Driveway – Northbound                                 | --                     | --                       |                     |
| Gooding Avenue – Eastbound                                 |                        |                          |                     |
| Gooding Avenue – Westbound                                 |                        |                          | (B/11.3) / (B/14.2) |

\*Unsignalized Intersection

Under the 2025 build condition, the proposed full movement STOP-controlled site driveway intersection with Gooding Avenue will operate at LOS B with 11.3 seconds of delay during the weekday AM peak hour and a LOS B with 14.2 seconds during the weekday PM peak hour. Gooding Avenue has 12-foot wide lanes and a 6-foot shoulder. It is anticipated that the existing roadway geometry will support a vehicle by-pass traveling westbound while vehicles make a left-turn into the site.

Under the 2025 build condition, the signalized intersection of Metacom Avenue (Route 136) & Gooding Avenue / Narrows Road is anticipated to operate at a LOS C with 21.1 seconds of delay during the weekday AM peak hour and a LOS C with 26.1 seconds of delay during the weekday PM peak hour. All intersection approaches and a majority of the individual intersection movements will maintain background operating conditions with one exception. The eastbound left movement is anticipated to change in operation from a LOS C with 34.5 seconds of delay to a LOS D with 35.6 seconds of delay during the weekday AM peak hour when comparing background to build conditions, representing a minor increase in delay of 1.1 seconds at this movement. The signalized intersection of Metacom Avenue (Route 136) & Gooding Avenue / Narrows Road will maintain acceptable operating conditions under the 2025 Build condition during the weekday AM and weekday PM peak hours.

The maximum 95<sup>th</sup> percentile queue at the site driveway onto Gooding Avenue is anticipated to be 0.1 vehicles during the weekday AM peak hour and 0.2 vehicles during the weekday PM peak hour, which can be accommodated with the proposed driveway layout. At the intersection of Metacom Avenue (Route 136) & Gooding Avenue / Narrows Road, no 95<sup>th</sup> percentile queue lengths are anticipated to increase more than 25 feet (1 vehicle length) during the weekday AM and weekday PM peak hours when comparing 2025 background conditions to 2025 build conditions.

**Conclusion:**

A traffic impact analysis of the study area intersections indicates that the proposed development along Gooding Avenue can be accommodated without adverse impacts on the study area roadway network. The project proposes to construct a 80-unit hotel with appurtenant parking, loading, landscape, utility, and drainage features. Access to the site is proposed along Gooding Avenue via one full-movement STOP-controlled site driveway.

Based on the analysis, the proposed development is anticipated to generate 37 (21 entering, 16 exiting) trips during the weekday AM peak hour and 48 (24 entering, 24 exiting) trips during the weekday PM peak hour. Under the build condition in the year 2025, the site driveway is expected to operate at level of service B during the weekday AM and weekday PM peak hours.

It is the professional opinion of Solli Engineering that the traffic anticipated to be generated by the proposed development can be accommodated by the surrounding roadway network. There is no indication that the proposed development will have an adverse impact on the operations of the adjacent roadway network.

If you have any questions or require any additional information, please call at your convenience.

Sincerely,  
**Solli Engineering, LLC**

## Hotel

---

### Description

A hotel is a place of lodging that provides sleeping accommodations and supporting facilities such as a full-service restaurant, cocktail lounge, meeting rooms, banquet room, and convention facilities. A hotel typically provides a swimming pool or another recreational facility such as a fitness room. All suites hotel (Land Use 311), business hotel (Land Use 312), motel (Land Use 320), and resort hotel (Land Use 330) are related uses.

### Additional Data

Twenty-five studies provided information on occupancy rates at the time the studies were conducted. The average occupancy rate for these studies was approximately 82 percent.

Some properties in this land use provide guest transportation services (e.g., airport shuttle, limousine service, golf course shuttle service) which may have an impact on the overall trip generation rates.

The technical appendices provide supporting information on time-of-day distributions for this land use. The appendices can be accessed through either the ITETripGen web app or the trip generation resource page on the ITE website (<https://www.ite.org/technical-resources/topics/trip-and-parking-generation/>).

The sites were surveyed in the 1980s, the 1990s, the 2000s, and the 2010s in California, District of Columbia, Florida, Georgia, Indiana, Minnesota, New York, Ontario (CAN), Pennsylvania, South Dakota, Texas, Vermont, Virginia, and Washington.

***For all lodging uses, it is important to collect data on occupied rooms as well as total rooms in order to accurately predict trip generation characteristics for the site.***

***Trip generation at a hotel may be related to the presence of supporting facilities such as convention facilities, restaurants, meeting/banquet space, and retail facilities. Future data submissions should specify the presence of these amenities. Reporting the level of activity at the supporting facilities such as full, empty, partially active, number of people attending a meeting/banquet during observation may also be useful in further analysis of this land use.***

Dear Mr. Schroder:

Your Public Records request for motor vehicle accident reports/data for the last three (3) years January 2020 – December 2022 from the Bristol Police Department has been received.

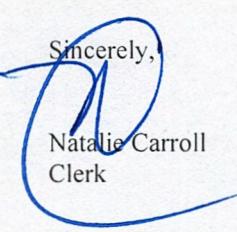

As per our phone conversation here are the numbers for those years:

- 2020 Gooding Ave. from Broadcommon Rd. to Metacom Ave. 6 MVA's reported with 6 at the intersection of Gooding and Metacom and 10 at Metacom and Gooding Ave.
- 2021 Gooding Ave. from Broadcommon Rd. to Metacom Avenue 3 MVA's reported with 6 reported on Gooding at Metacom and 9 at Metacom and Gooding Ave.
- 2022 Gooding Ave. from Broadcommon Rd. to Metacom Ave. 4 MVA's reported with 7 on Gooding at Metacom and 10 Metacom Ave. at Gooding Ave.

There is no cost for this information as I indicated in our phone conversation as the first hour of retrieval is free, however should you require the actual reports or further data after the first hour its \$22.50 per hour and \$.15 per page. To include self-addressed postage. You may however set up a cooperative account as we discussed through LexisNexis for your convenience.

If you have any questions or should require further assistance, please contact us.

Sincerely,

  
Natalie Carroll  
Clerk

## Intersection Summary

Area Type: Other

Cycle Length: 90

Actuated Cycle Length: 90

Offset: 47 (52%), Referenced to phase 2:SBT and 6:NBT, Start of Yellow

Natural Cycle: 65

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.58

Intersection Signal Delay: 19.9

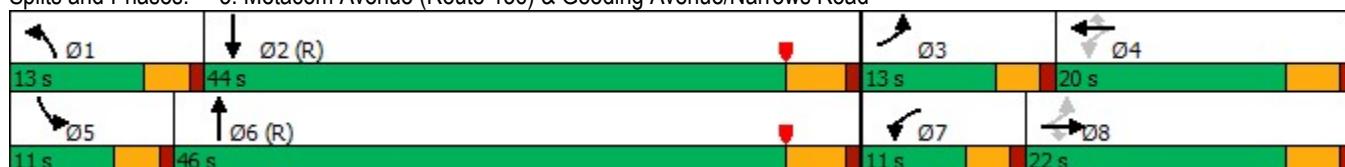

Intersection LOS: B

Intersection Capacity Utilization 61.9%

ICU Level of Service B

Analysis Period (min) 15

Splits and Phases: 3: Metacom Avenue (Route 136) &amp; Gooding Avenue/Narrows Road

## Intersection Summary

Area Type: Other

Cycle Length: 90

Actuated Cycle Length: 90

Offset: 44 (49%), Referenced to phase 2:SBT and 6:NBT, Start of Yellow

Natural Cycle: 75

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.77

Intersection Signal Delay: 25.4

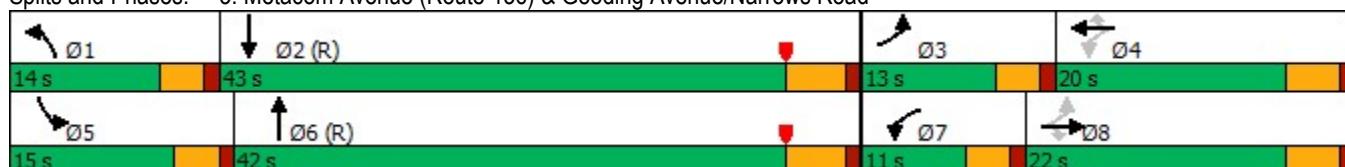

Intersection LOS: C

Intersection Capacity Utilization 71.2%

ICU Level of Service C

Analysis Period (min) 15

Splits and Phases: 3: Metacom Avenue (Route 136) &amp; Gooding Avenue/Narrows Road

## Intersection Summary

Area Type: Other

Cycle Length: 90

Actuated Cycle Length: 90

Offset: 47 (52%), Referenced to phase 2:SBT and 6:NBT, Start of Yellow

Natural Cycle: 65

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.63

Intersection Signal Delay: 20.8

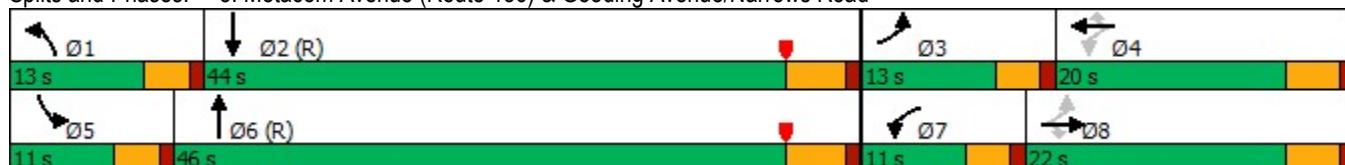

Intersection LOS: C

Intersection Capacity Utilization 62.6%

ICU Level of Service B

Analysis Period (min) 15

Splits and Phases: 3: Metacom Avenue (Route 136) &amp; Gooding Avenue/Narrows Road

## Intersection Summary

Area Type: Other

Cycle Length: 90

Actuated Cycle Length: 90

Offset: 44 (49%), Referenced to phase 2:SBT and 6:NBT, Start of Yellow

Natural Cycle: 75

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.79

Intersection Signal Delay: 25.8

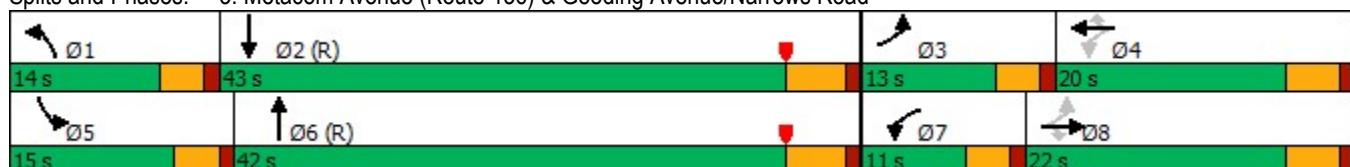

Intersection LOS: C

Intersection Capacity Utilization 72.2%

ICU Level of Service C

Analysis Period (min) 15

Splits and Phases: 3: Metacom Avenue (Route 136) &amp; Gooding Avenue/Narrows Road

## Intersection Summary

Area Type: Other

Cycle Length: 90

Actuated Cycle Length: 90

Offset: 47 (52%), Referenced to phase 2:SBT and 6:NBT, Start of Yellow

Natural Cycle: 65

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.63

Intersection Signal Delay: 21.1

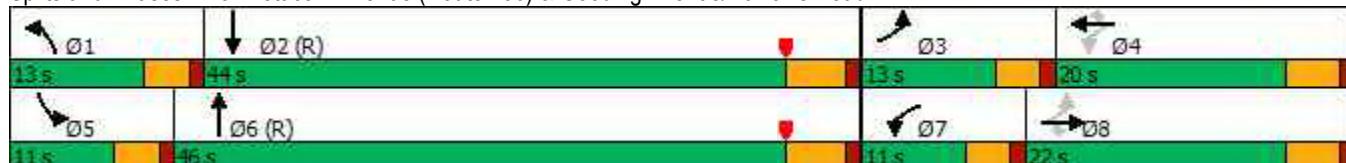

Intersection LOS: C

Intersection Capacity Utilization 62.9%

ICU Level of Service B

Analysis Period (min) 15

Splits and Phases: 3: Metacom Avenue (Route 136) &amp; Gooding Avenue/Narrows Road

[About datasets used in this table](#)

#### Value Notes

⚠ Estimates are not comparable to other geographic levels due to methodology differences that may exist between different data sources.

Some estimates presented here come from sample data, and thus have sampling errors that may render some apparent differences between geographies statistically indistinguishable. ] Click the Quick Info ⓘ icon to the left of each row in T learn about sampling error.

In Vintage 2022, as a result of the formal request from the state, Connecticut transitioned from eight counties to nine planning regions. For more details, please see the Vintage 2022 release notes available here: [Release Notes](#).

The vintage year (e.g., V2022) refers to the final year of the series (2020 thru 2022). Different vintage years of estimates are not comparable.

Users should exercise caution when comparing 2017-2021 ACS 5-year estimates to other ACS estimates. For more information, please visit the [2021 5-year ACS Comparison Guidance](#) page.

#### Fact Notes

- (a) Includes persons reporting only one race
- (b) Hispanics may be of any race, so also are included in applicable race categories
- (c) Economic Census - Puerto Rico data are not comparable to U.S. Economic Census data

#### Value Flags

- D Suppressed to avoid disclosure of confidential information  
F Fewer than 25 firms  
FN Footnote on this item in place of data  
NA Not available  
S Suppressed; does not meet publication standards  
X Not applicable  
Z Value greater than zero but less than half unit of measure shown  
- Either no or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest or upper interval of an open ended distribution  
N Data for this geographic area cannot be displayed because the number of sample cases is too small.

QuickFacts data are derived from: Population Estimates, American Community Survey, Census of Population and Housing, Current Population Survey, Small Area Health Insurance Estimates, Small Area Income and Poverty Estimates, State and Local Government Finances, County Business Patterns, Nonemployer Statistics, Economic Census, Survey of Business Owners, Building Permits.
