

July Water Report

During July, we replaced two water services by installing new water lines and removing the old galvanized lines.

We continued working with Allen Edwin Homes on several vacant lots scheduled for new home construction. Our department provided information regarding the availability of water and sewer services for each lot and advised on the necessary steps for lots where services were not yet available.

This month, we completed 14 work orders, including the replacement of aging water meters and MXU radios.

SEMCO Gas has begun a major gas main replacement project. In support of this work, we have been locating and marking water, sewer, and storm utility lines. During the month, we responded to 55 Miss Dig requests and completed all required marking and reporting.

We also completed all monthly compliance requirements established by EGLE, ensuring the department remains in full regulatory compliance.
