

## Water Department Monthly Report – June 2026

June started off very busy for the Water Department. Lead and Copper samples were completed on June 17, 2026. One household did not follow the sampling directions, so one additional home will need to be sampled in order to complete the required 20 sites per EGLE standards. We also completed the final three samples for the monitoring year.

During the month of June, the department completed 116 MISS DIG tickets and requests. This brings the yearly total to 546 tickets so far. For each ticket, staff marks water, sewer, and storm lines.

A broken water main on 3rd Street was repaired. A boil water order was issued, and the proper paperwork and required samples were completed.

Staff have also been installing meters with built-in shutoffs in some duplexes that only have one service line.

Great progress continues to be made on the estimated meter list. The list is now down to fewer than 10 meters.
