1.0 OVERVIEW

1.1 PURPOSE

The Central Appraisal District of Johnson County (JCAD) has prepared and published this reappraisal plan to comply with requirements of the <u>Texas Property Tax Code</u> Sec. 6.05(i)¹ and 25.18². Additionally, this plan is intended to provide the Board of Directors, property owners, and taxing units the appraisal district serves with a better understanding of the JCAD responsibilities and appraisal activities throughout the business year.

1.2 APPRAISAL DISTRICT

JCAD is a political subdivision of the State of Texas created effective January 1, 1980. The appraisal district is responsible for local property tax appraisal and exemption administration for the taxing units in Johnson County. The provisions of the Texas Property Tax Code govern the legal, statutory, and administrative requirements of the appraisal district.

1.3 APPRAISAL DISTRICT BOARD OF DIRECTORS

The Board of Directors constitutes the district's governing body. The Chief Appraiser, appointed by the Board of Directors, is the chief administrator and chief executive officer of the appraisal district. The Board of Directors is comprised of 9 members:

- 5 Members nominated and voted on by the taxing units.
- 3 Members elected by popular vote.
- The elected Tax Assessor/Collector.

¹ See Reappraisal Plan Section 1.7.3

² See Reappraisal Plan Section 1.7.4

1.4 TAXING UNITS

Each of the 37 taxing units set a tax rate to generate revenue to pay for public services like police and fire protection, public schools, road and street maintenance, courts, water, and sewer systems, etc. Property appraisals and estimated values by the appraisal district allocate the year's tax burden based on each taxable property's market value. Appraisal districts also determine eligibility for various types of property tax exemptions such as those for homeowners, the elderly, disabled veterans, charitable or religious organizations, as well as approve special agricultural productivity valuations.

1.5 TEXAS CONSTITUTION AND LEGISLATURE

Article VIII: Taxation and Revenue - Constitution of Texas requires all property in the State of Texas, whether owned by natural persons or corporations, other than municipal, shall be taxed in proportion to its value. The Texas Constitution authorizes local governments to collect property tax revenues. The statutes establish the process for local officials to follow in determining property values, setting tax rates, and collecting property taxes.

The Texas Legislature is a dual body composed of a 31-member Senate and a 150-member House of Representatives. One of the duties of the legislature include consideration of proposed laws and resolutions that standardize the administration of local property taxes as well as consideration of proposed constitutional amendments for submission to the voters.

1.6 TEXAS COMPTROLLER

The Texas Comptroller Property Tax Assistance Division (PTAD) provides information on property tax issues to taxpayers, property owners, appraisal districts, appraisal review boards and taxing units. PTAD updates and publishes the Texas Property Tax Code after each legislative session to provide access to the statutes that guide property tax administration in Texas. The annotated version of this publication includes summaries of court cases, attorney general opinions and other references.

2025-2026 REAPPRAISAL PLAN

PTAD conducts and publishes four major property value studies and reviews of school districts and appraisal districts required by Texas law. These studies are designed to ensure consistent appraisal standards and an equitable school finance system.

1.7 TEXAS PROPERTY TAX CODE

The Texas Property Tax Code contains statutes regulating the assessment, taxation, exemptions, appeal options, hearing procedures for Texas property tax appeals, judicial appeals for Texas property taxes, timely payment of Texas property taxes, and penalties for late payment of property taxes. The Texas Property Tax Code covers all counties in Texas and does not vary from county to county. Each county has an appraisal district which estimates the market value (assessed value) for real and personal property in the county.

1.7.1 SECTION 23.01 APPRAISALS GENERALLY

Sec. 23.01. Appraisals Generally.

- (a) Except as otherwise provided by this chapter, all taxable property is appraised at its market value as of January 1.
- (b) The market value of property shall be determined by the application of generally accepted appraisal methods and techniques. If the appraisal district determines the appraised value of a property using mass appraisal standards, the mass appraisal standards must comply with the Uniform Standards of Professional Appraisal Practice. The same or similar appraisal methods and techniques shall be used in appraising the same or similar kinds of property. However, each property shall be appraised based upon the individual characteristics that affect the property's market value, and all available evidence that is specific to the value of the property shall be taken into account in determining the property's market value.

1.7.2 SECTION 23.013 MARKET DATA COMPARISON

Sec. 23.013. Market Data Comparison Method of Appraisal.

- (a) If the chief appraiser uses the market data comparison method of appraisal to determine the market value of real property, the chief appraiser shall use comparable sales data and shall adjust the comparable sales to the subject property.
- (b) A sale is not considered to be a comparable sale unless the sale occurred within 24 months of the date as of which the market value of the subject property is to be determined, except that a sale that did not occur during that period may be considered to be a comparable sale if enough comparable properties were not sold during that period to constitute a representative sample.
- (b-1) Notwithstanding Subsection (b), for a residential property in a county with a population of more than 150,000, a sale is not considered to be a comparable sale unless the sale occurred within 36 months of the date as of which the market value of the subject property is to be determined, regardless of the number of comparable properties sold during that period.
- (c) A sale of a comparable property must be appropriately adjusted for any change in the market value of the comparable property during the period between the date of the sale of the comparable property and the date as of which the market value of the subject property is to be determined.
- (d) Whether a property is comparable to the subject property shall be determined based on similarities with regard to location, square footage of the lot and improvements, property age, property condition, property access, amenities, views, income, operating expenses, occupancy, and the existence of easements, deed restrictions, or other legal burdens affecting marketability.
- (e) In this subsection, "designated historic district" means an area that is zoned or otherwise designated as a historic district under municipal, state, or federal law. In determining the market value of residential real property located in a designated historic district, the chief appraiser shall consider the effect on the property's value of any restriction placed by the historic district on the property owner's ability to alter, improve, or repair the property.

1.7.3 SECTION 6.05(I) REAPPRAISAL PLAN

(i) To ensure adherence with generally accepted appraisal practices, the board of directors of an appraisal district shall develop biennially a written plan for the periodic reappraisal of all property within the boundaries of the district according to the requirements of Section 25.18 and shall hold a public hearing to consider the proposed plan. Not later than the 10th day before the date of the hearing, the secretary of the board shall deliver to the presiding officer of the governing body of each taxing unit participating in the district a written notice of the date, time, and place for the hearing. Not later than September 15 of each even-numbered year, the board shall complete its hearings, make any amendments, and by resolution finally approve the plan. Copies of the approved plan shall be distributed to the presiding officer of the governing body of each taxing unit participating in the district and to the comptroller within 60 days of the approval date.

1.7.4 SECTION 25.18 PERIODIC REAPPRAISALS

Sec. 25.18. Periodic Reappraisals.

- (a) Each appraisal office shall implement the plan for periodic reappraisal of property approved by the board of directors under Section 6.05(i).
- (b) The plan shall provide for the following reappraisal activities for all real and personal property in the district at least once every three years:
- (1) identifying properties to be appraised through physical inspection or by other reliable means of identification, including deeds or other legal documentation, aerial photographs, land-based photographs, surveys, maps, and property sketches:
 - (2) identifying and updating relevant characteristics of each property in the appraisal records;
 - (3) defining market areas in the district;
 - (4) identifying property characteristics that affect property value in each market area, including:
 - (A) the location and market area of property;
 - (B) physical attributes of property, such as size, age, and condition;
 - (C) legal and economic attributes; and
 - (D) easements, covenants, leases, reservations, contracts, declarations, special assessments, ordinances, or legal restrictions;
- (5) developing an appraisal model that reflects the relationship among the property characteristics affecting value in each market area and determines the contribution of individual property characteristics;
 - (6) applying the conclusions reflected in the model to the characteristics of the properties being appraised; and
- (7) reviewing the appraisal results to determine value.
- (c) A taxing unit by resolution adopted by its governing body may require the appraisal office to appraise all property within the unit or to identify and appraise newly annexed territory and new improvements in the unit as of a date specified in the resolution. On or before the deadline requested by the taxing unit, which deadline may not be less than 30 days after the date the resolution is delivered to the appraisal office, the chief appraiser shall complete the appraisal and deliver to the unit an estimate of the total appraised value of property taxable by the unit as of the date specified in such resolution. The unit must pay the appraisal district for the cost of making the appraisal. The chief appraiser shall provide sufficient personnel to make the appraisals required by this subsection on or before the deadline requested by the taxing unit. An appraisal made pursuant to this subsection may not be used by a taxing unit as the basis for the imposition of taxes.

1.7.5 TEXAS CONSTITUTION AND STATUES

As of the date of this report, the statutes available on the <u>Texas Constitution and Statutes website</u>, were current through the 88th 4th Called Legislative Session, 2023. The constitutional provisions found on this website were current through the amendments approved by voters in November 2023.

1.8 APPRAISAL STANDARDS & PRACTICES

1.8.1 INTERNATIONAL ASSOCIATION OF ASSESSING OFFICERS

The International Association of Assessing Officers (IAAO) is a global community of diverse mass appraisal professionals advancing fair and equitable property appraisal, assessment administration, and property tax policy through professional development, research, standards, and technical assistance.

1.8.2 UNIFORM STANDARDS OF PROFESSIONAL APPRAISAL PRACTICE

The Uniform Standards of Professional Appraisal Practice (USPAP) is the generally recognized ethical and performance standards for the appraisal profession in the United States. USPAP was adopted by

Congress in 1989, and contains standards for all types of appraisal services, including real estate, personal property, business and mass appraisal. Compliance is required for state-licensed and state-certified appraisers involved in federally-related real estate transactions.

1.8.3 TEXAS DEPARTMENT OF LICENSING AND REGULATIONS

The Texas Department of Licensing and Regulation (TDLR) provides oversight for a broad range of occupations, businesses, facilities, and equipment to ensure Texans are served by qualified professionals. Property Tax Professionals are property tax appraisers, assessor/collectors, and collectors in the State of Texas. The following are the Property Tax Professional designations:

- Registered Professional Appraiser (RPA)
- Certified Chief Appraiser (CCA)
- Certified Tax Administrator (CTA)
- Certified School Tax Administrator (CSTA)
- Registered Tax Assessor (RTA)

1.8.3.1 REQUIRED EDUCATION AND EXAMINATIONS FOR RPA'S

The TDLR has set a minimum of 3 years but a maximum of 5 years to fulfill their core education requirements to obtain an RPA certification.

Class 2 must be completed within 12 months of becoming registered as Class 1 Appraiser.

- 32 hours of Basics of Texas Property Tax System
- 8 hours of Professional Ethics

Class 3 must be completed within 36 months of becoming registered as a Class 1 Appraiser.

- 18 hours of Income Approach to Value
- 18 hours of Theory and Practice of Personal Property Appraisal
- 15 hours of Uniform Standards of Professional Appraisal Practices (USPAP)
- 24 hours in Theory and Practice of Appraisal of Real Property
- Class 3 Examination

2025-2026 REAPPRAISAL PLAN

Class 4 must be completed within 60 months of becoming registered as a Class 1 Appraiser.

- 36 months of experience as an Appraiser registrant
- 18 hours in Analyzing Real Property Appraisal
- 16 hours in Texas Property Tax Law
- 18 hours in Mass Appraisal
- 3.5 hours in USPAP (if no USPAP within 2 years)
- Class 4 Examination

1.8.3.2 RPA CONTINUING EDUCATION REQUIREMENTS

Once an appraiser has obtained their RPA designation, the TDLR requires the RPA to renew their certification annually and meet the following continuing education (CE) hours.

- Two (2) hours in professional ethics
- A state laws and rules update course (the number of hours for the laws and rules update course is set by the Comptroller after each legislative session).
- In addition to the two (2) hours in professional ethics and the State laws and rules update course, RPAs are required to take three and a half (3.5) hours in USPAP.
- Continuing education credit must be completed during the 24-month period before the
 expiration of the license to earn the required 30 CE hours for Certified Appraisers (RPA) and
 Assessors Collectors (RTA), or ten (10) CE hours for Certified Collectors (RTC). Expiration
 dates can be found on their registration certificate.

1.8.3.3 RPA REQUIREMENTS FOR CHIEF APPRAISERS

- At least 30 hours of approved continuing education in appraisal procedures and methods, tax assessment and collection, professional ethics, laws, and rules, USPAP or customer service.
- At least half of the 30 hours must be in programs devoted to one or more of the topics listed in Texas Occupation Code §1151.164(b). Any Tax Assessment and Collections course hours will not be used to fulfill this half of the Chief Appraisers continuing education requirement;
- At least two of the required hours in a program of professional ethics specific to the Chief Appraiser of an appraisal district, including a program on the importance of maintaining the independence of an appraisal office from political pressure.

1.8.4 JCAD POLICY ON APPRAISAL STANDARDS & PRACTICES

JCAD follows standards for appraisal practices and procedures set forth by the IAAO (IAAO) as well as the Uniform Standards of Professional Appraisal Practice (USPAP) promulgated by the Appraisal Foundation.

1.8.4.1 STAFF APPRAISERS

All JCAD staff appraisers are registered with the Texas Department of Licensing and Regulations (TDLR), and are required to fulfill the core education requirements and pass all classes/examinations within the time frame allowed by the TDLR. Failure to meet the TDLR requirements will result in the termination of the employee.

2025-2026 REAPPRAISAL PLAN

1.8.4.2 CONTRACTED APPRAISAL SERVICES

JCAD has entered a contract for professional valuation services with Capitol Appraisal Group, LLC (CAGI). The contract specifies on page 1 of the Agreement for Appraisal Services, "appraisals shall conform to the applicable provisions of the Code, Standard 6 of the Uniform Standards of Professional Appraisal Practice, and the Texas Administrative Code, and other applicable laws."

2.0 ORGANIZATION & RESOURCES

2.1 ORGANIZATION

2.1.1 APPRAISAL OPERATIONS DEPARTMENT

The appraisal department is responsible for the valuation of all real and personal property accounts. Staff consists of eleven appraisers, two data collectors and four appraisal clerks.

2.1.1.1 CHIEF APPRAISER

• Jim Hudspeth, RPA, RTA, CTA, CSTA, CCA – Executive Director

2.1.1.2 ADMINISTRATIVE APPRAISERS

- Janice Lee, RPA, RTA, CTA Director
- Brittany Vereen, RPA Assistant Director

2.1.1.3 RESIDENTIAL APPRAISERS

- Romelia Silva, RPA
- Chelce Montgomery, RPA
- Aleeja Bone, RPA
- Becky Templeton, registered class 3 appraiser
- Megan Baker, registered class 1 appraiser
- vacant

2.1.1.4 COMMERCIAL & BUSINESS PERSONAL PROPERTY

- Michelle Gill, RPA
- Kaylee Ford, registered class 1 appraiser

2.1.2 ADMINISTRATIVE DEPARTMENT

The Administration Department's function is to plan, organize, direct, and control the business support functions related to human resources, budget, finance, records management, purchasing, fixed assets, facilities, and postal services.

2.1.3 DATA OPERATIONS DEPARTMENT

The Data Operations Department processes appraisal changes, exemptions, deferrals and provides clerical support to the Appraisal Review Board.

2.1.4 GIS / OWNERSHIP / TAXPAYER ASSISTANCE DEPARTMENT

The department's primary responsibility is to provide support to taxpayers, taxing units, JCAD staff and general public.

2025-2026 REAPPRAISAL PLAN

The phone system, JCAD website, ConnectExplorer maintenance and information technology support is administered from this department.

2.1.4.1 GIS

The JCAD geographic information system (GIS) technicians work closely with ownership clerks, local surveyors, and other local GIS departments to create cadastral maps and maintain various layers of data utilizing the following:

- Aerial and oblique imagery
- Property surveys provided by owners or surveyors
- Real Property records filed with the Johnson County Clerk
- Plats filed with the Johnson County Clerk
- Taxing Unit ordinances, orders, resolutions, abatements and tax increment financing zones
- Drilling permits filed with the Texas Railroad Commission

2.1.4.2 OWNERSHIP

Ownership clerks work closely with GIS to update and create new accounts using real property documents filed at the county clerk's office and ownership records from the Texas Department of Housing and Community Affairs (TDHCA) Manufactured Housing Division.

2.1.4.3 TAXPAYER ASSISTANCE

Taxpayer representatives assist the public on the phone, in person and through email as well providing support throughout the office.

Officewide support includes the scanning and management of digital records, processing outgoing and incoming mail, updating mailing addresses, processing returned mail, data entry, quality control and preparing appraisal field work.

2025-2026 REAPPRAISAL PLAN

2.2 PLANNING AND COORDINATION

2.2.1 ADMINISTRATIVE REVIEW

After certification, administrative staff meet to outline the upcoming appraisal year.

2.2.1.1 REVIEW OF PROCEDURES

New and existing procedures are identified, and examined to keep these practices current and efficient. Historical productivity is analyzed to ensure adequate resources are available to achieve required yearly objectives.

2.2.1.2 LEGISLATION CHANGES

Required changes that result from new legislation are researched and an implementation plan is put into action.

2.2.1.3 CALENDAR OF EVENTS

The Appraisal Calendar³ specifies key events corresponding with Texas Property Tax Code requirements for appraisal districts. Department calendars are coordinated with the appraisal calendar to coordinate and optimize workflow.

15 | Page

Updated: 9/12/2024 4:12 PM

³ See Appendix B: Appraisal Calendar

2.3 DATA MANAGEMENT

JCAD is responsible for establishing and maintaining approximately 369,438 real and personal property accounts covering 734 square miles within Johnson County. This data includes property characteristics, ownership, and exemption information.

2.3.1 DATA COLLECTION

Data is acquired in many ways including field inspections, documentation from property owners, surveyors, title companies, deed and plat records, photos, renditions, and aerial / oblique imagery.

2.3.1.1 COMPUTER ASSISTED MASS APPRAISAL

Computer Assisted Mass Appraisal (CAMA) software manages and analyzes assessment data, and generates fair, equitable, and defendable property valuations and adheres to the standards of the IAAO regarding its appraisal practices and procedures, and subscribes to the standards promulgated by USPAP to the extent they are applicable.

The 2023 legislative session provided new additions to the Texas Property Tax Code that require updates and changes to the CAMA software. SB2 added section 23.231, known as the Circuit Breaker Limitation on Non-Resident Homestead Property Value Increase which requires yearly monitoring and identification of specific properties for value cap purposes on properties valued at \$5,000,000 or less and does not qualify for special appraisal. Additional information will also be provided by the Comptroller for 2025 and 2026 in relation to changes that take place in the consumer price index. At this point, the new section of the Texas Property Tax Code is set to expire December 31, 2026, which would be the conclusion of this current reappraisal plan.

2.3.1.2 GEOGRAPHIC INFORMATION SYSTEM

The district Geographic Information System (GIS) utilizes ArcGIS Enterprise to create and maintain data used for the development of custom analytics for appraisal purposes.

Various GIS layers are inspected each year to determine whether current delineation requires changes because of shifting market trends or newly developed neighborhoods.

Prior year protest data is analyzed with GIS tools to further identify potential market areas with higher-than-average appeals in efforts to improve appraisal accuracy and uniformity.

2.3.1.3 PROPERTY CHARACTERISTICS

Property characteristics (sometimes called attributes) such as size, use, construction type, age and location are used for property classification⁴. PTAD publishes a guide, <u>Texas Property Tax Assistance</u>

<u>Property Classification Guide</u>, to assist appraisal districts in the classification of property for use in the SDPVS. Contributing land characteristics can consist of view, location, frontage, zoning, topography and utility availability. Contributing improvement characteristics can consist of size, age, depreciation, construction type, and renovations.

⁴ See Appendix A: Property Classification Codes

2025-2026 REAPPRAISAL PLAN

Property characteristic data is collected and noted on property record cards (PRC) by staff appraisers. The PRC are submitted to data operations for data entry and quality control. Once complete, the PRC are scanned for permanent record retention by the taxpayer assistance staff.

2.3.1.4 SALES DATA

Vacant land and improved property sales data is collected by appraisal clerks through sales letters, closing statements, contracts, third party sources, individual fee appraisals, financial documentation and other data provided by property owners. Closing statements are often provided during the hearing process and are the most reliable and preferred source of sales data. All sales are verified and must be arms-length transactions. The most valid and accurate sales data prevails.

Additional data for commercial property is obtained from Trepp. Trepp is a subscription-based provider of commercial insight and data on major retail franchises and brands. It tracks the market benchmark for commercial properties. PTAD also uses Trepp in the SDPVS.

Section 22.27 of the Texas Property Tax Code prohibits all appraisal district from disclosing sales information gathered from a private source. Because Texas is a non-disclosure state, there are no publicly available sources of sales information. Taxpayers who have protested his or her property value are entitled under HB201⁵ to the sales used to value his or her property, but no other sales information.

2.3.2 DATA STORAGE

Data is stored to a network of six onsite servers that are copied on a nightly basis to a secure cloud server as well as an offsite location.

⁵ See Section 3.6 Hearing Process

2.4 JCAD WEBSITE

The JCAD website makes a broad range of information available for public access, including information on the appraisal process, property characteristics data, certified values, protests, and appeal procedures.

2.4.1 FORMS

https://johnsoncad.com/forms-and-applications/ Forms available for download include:

- Homestead Exemption
- Disabled Veterans Exemption
- Charitable Organization Property Tax Exemption
- Religious Organization Property Tax Exemption
- Agriculture Appraisal 1d-1 Application
- Wildlife Application 1-d-1
- Personal Property Rendition
- General Real Estate Rendition
- Real Property Inventory Rendition
- Dealers Motor Vehicle Declaration

- Dealers Motor Vehicle Tax Statement
- Dealers Vessel, Trailer, and Outboard Motor Inventory Declaration
- Dealers Vessel, Trailer, and Outboard Motor Inventory Tax Statement
- Dealers Heavy Equipment Inventory Declaration
- Dealers Heavy
 Equipment Inventory Tax

 Statement
- Retail Manufactured Housing Inventory Declaration

- Retail Manufactured Housing Inventory Tax Statement
- Notice of Protest
- Appointment of Agent for Property Taxes
- Property Owners
 Affidavit of Evidence
- Property Owners Motion for Correction of Appraisal Roll
- Motion for Hearing to Correct 1/3 Over-Appraisal Error for Non-Homestead Property
- Motion for Hearing to Correct 1/4 Over-Appraisal Error for Homestead Property

3. APPRAISAL ACTIVITIES

3.1 APPRAISAL FREQUENCY

Not withstanding anything in the rest of this document the directives below control.

The JCAD Board of Directors has instructed the chief appraiser to do the following:

- 6 Adjust the reappraisal cycle from every year to every three years.
- ⁷ JCAD will not raise market values without clear and convincing evidence by the Texas Property Tax Code 23.01(e)
- 8 Sustain 2024 values for the 2025 and 2026 tax years.
 - Except for properties that are required to be looked at annually such as:
 - Business Personal Properties through renditions
 - Mineral Properties
 - Utility Properties
 - Industrial Properties
- ⁹ The following requires a JCAD Board of Directors action and approval:
 - Reappraisal due to changing markets; or
 - Reappraisal in response to the state study; or
 - Reappraisal if property values decrease substantially
- Analyze appraised values.
- The appraised value of a residence homestead (HS Cap Loss) is below the market value and must be raised as required by the Tex
- as Property Tax Code 23.23.
- The appraised value of a property qualified for the Circuit Breaker is below the Market Value and must be raised as required by the Texas Property Tax Code 23.231.
- To provide for new property or improvements and property that escaped taxation (omitted property) as required by the Texas Property Tax Code 25.21 or if the property escaped reappraisal during the previous reappraisal cycle.
- 10 Continue to follow USPAP guidelines as required by the Texas Property Tax Code.

As we progress into the actual reappraisal process, we reserve the right to modify the plan as necessary to meet this office's requirements as set forth in the Texas Property Tax Code.

⁶ 1st Substantial Change by the 2025-2026 Reappraisal Plan Subcommittee of the JCAD Board of Directors.

3.2 SCHOOL DISTRICT PROPERTY VALUE STUDY (SDPVS)

Previously known as the Property Value Study (PVS), the School District Property Value Study (SDPVS) is a ratio study conducted by PTAD every two years¹¹. SDPVS is used to measure the uniformity and median level of appraisals by the appraisal district within each major category of property.

For appraisal districts, the reported measures include median level of appraisal, coefficient of dispersion (COD), the percentage of properties within 10% of the median, the percentage of properties within 25% of the median, and price-related differential (PRD)¹² for properties overall and by state category.

SDPVS results are submitted to the Texas Education Agency (TEA) to determine how much state funding each school district is eligible to receive. School district funding could be negatively impacted if JCAD does not receive "valid" results, meaning market values are within a +/- 5% margin of error of the SDPVS.

The most recent JCAD SDPVS occurred in 2023¹³. The preliminary results of the study were released in January 2024 and the final results released in July 2024. The next JCAD SDPVS will occur in 2025.

3.3 METHODS AND ASSISTANCE PROGRAM (MAP)

Texas Property Tax Code Section 5.102 requires PTAD to review each appraisal district's governance, taxpayer assistance, operating procedures and appraisal standards, procedures, and methodology for the year the SDPVS was not conducted.

PTAD requires the same five mandatory pass/fail questions for all appraisal districts, but the number of yes/no questions increase by tier level, based on total population. JCAD is a Tier 1 appraisal district.

Tier Population and Questions

Tier	Population	Questions Received
Tier 1	120,000 or more	Tier 2 questions and additional questions
Tier 2	Less than 120,000 to 20,000	Tier 3 questions and additional questions
Tier 3	Less than 20,000	Basic, minimum set of review questions

The comptroller is required to deliver a written report to the Chief Appraiser, CAD board of directors, and each superintendent and board of trustees in school districts in the CAD concerning the MAP findings. This review provides the appraisal district with the opportunity to ensure that the office policies and procedures, and the appraisal standards and methodology comply with Texas Property Tax Code and USPAP requirements.

2025-2026 REAPPRAISAL PLAN

3.4 NOTICES OF APPRAISED VALUE

Each tax year covered by the plan, following the conclusion of the outlined appraisal activities, the Chief Appraiser will provide a notice of appraised value for each property. Upon receipt of value notices, property owners may protest the value determined by the appraisal district within a period specified by the Texas Property Tax Code.

Sec. 25.19. Notice of Appraised Value.

- (a) By April 1 or as soon thereafter as practicable if the property is a single-family residence that qualifies for an exemption under Section 11.13, or by May 1 or as soon thereafter as practicable in connection with any other property, the chief appraiser shall deliver a clear and understandable written notice to a property owner of the appraised value of the property owner's property if:
 - (1) the appraised value of the property is greater than it was in the preceding year;
 - (2) the appraised value of the property is greater than the value rendered by the property owner;
 - (3) the property was not on the appraisal roll in the preceding year; or
 - (4) an exemption or partial exemption approved for the property for the preceding year was canceled or reduced for the current year.

3.5 MASS APPRAISAL REPORT

The mass appraisal report is written in compliance with Standards Rule 6-1 of USPAP as promulgated by the Appraisal Standards Board of The Appraisal Foundation. The 2024 mass appraisal was prepared under the provisions of the Texas Property Tax Code 23.01(b). Taxing units that participate in the district must use the appraisals as the basis for imposition of property taxes.

3.6 HEARING PROCESS

Evidence to be used by the appraisal district to meet its burden of proof for market value and equity in both informal hearings with appraisers and formal appraisal review board hearings is developed each year following the completion of the valuation phase. These items include, but are not limited to cost schedules, quality/density schedules, depreciation schedules, useful life tables, land tables, maps, sale and equity comparable adjustment grids, sale data, rental surveys, vacancy information, expense ratios, overall capitalization rates, income tables, field cards and pictures. This information is maintained electronically in categorized files by appraisal department and utilized throughout the protest phase of the appraisal calendar¹⁵. Information from those files not made confidential by the Texas Property Tax Code may be obtained by the public through appropriately filed public information requests.

3.6.1 EVIDENCE REQUEST (HB201)

House Bill 201 or HB201 is the term used to describe provision 41.461 of the Texas Property Tax Code.

Property owners or agents may ask for a copy of the data, schedules, formulas, and sales ¹⁶ any other information that an appraisal district plans to introduce at a hearing. The appraisal district must deliver

¹⁵ Appendix A: Appraisal Calendar

¹⁶ See Section 2.3.2.2 Sales Data for more information

2025-2026 REAPPRAISAL PLAN

this information at least 14 days before the protest hearing. All requests must be submitted in writing to JCAD.

Sec. 41.461. Notice of Certain Matters Before Hearing; Delivery of Requested Information.

- (a) At least 14 days before a hearing on a protest, the chief appraiser shall:
- (1) deliver a copy of the pamphlet prepared by the comptroller under Section 5.06 to the property owner initiating the protest, or to an agent representing the owner if requested by the agent;
- (2) inform the property owner that the owner or the agent of the owner is entitled on request to a copy of the data, schedules, formulas, and all other information the chief appraiser will introduce at the hearing to establish any matter at issue; and
- (3) deliver a copy of the hearing procedures adopted by the appraisal review board under Section 41.01 to the property owner.
- (b) The chief appraiser may not charge a property owner or the designated agent of the owner for copies provided to the owner or designated agent under this section, regardless of the manner in which the copies are prepared or delivered.

3.7 FIELD INSPECTIONS

Physical field inspections of vacant land, improved real property and personal property manufactured homes are conducted to measure recently constructed homes and buildings, measure structural additions to existing homes and buildings, or confirm or correct any relevant data the district has about the property, such as quality, depreciation, or land characteristics.

3.7.1 RESIDENTIAL

Nine field inspection areas for vacant land, improved real property and personal property manufactured homes receive field inspections on a three-year cycle. Changes to accounts as a result of field inspections are made to assure consistent treatment and uniformity within a neighborhood or market area. Changes to specific property for these reasons may also trigger an inspection or review of the market area where the property is located. This assists in identifying potential global benchmark changes that may necessitate review and/or changes of other properties for consistency. Account totals are fluid and areas will be reviewed and adjusted annually to incorporate new accounts.

Six residential appraisers are paired into three teams of two to perform an average of 35,000 field inspections field inspections over an eight-week period. During this time, field work is prepared by generating PRC and organizing them in driving order by area, street name and odd/even address numbers then placed in address number order by taxpayer assistance staff. GIS staff then create field maps and merge the PRC with the maps. Once complete, the field work is uploaded onto iPads.

2025-2026 REAPPRAISAL PLAN

In addition to the scheduled field inspection areas, all accounts flagged for a field inspection, regardless of location, receive a field inspection. Accounts are flagged for a field inspection for several reasons including new construction, remodel, demolition, additions, repairs, damage, and real property renditions as well as those properties whose condition was brought to our attention during the protest process.

During this time, field work is prepared by generating PRC and organizing them in driving order by area, street name and odd/even address numbers then placed in address number order by taxpayer assistance staff. GIS staff then create field maps and merge the PRC with the maps. Once complete, the field work is uploaded onto iPads.

3.7.2 COMMERCIAL / INDUSTRIAL REAL PROPERTY / BUSINESS PERSONAL PROPERTY

Seven field inspection areas for commercial real property, industrial real property and business personal property receive field inspections annually. Changes to accounts because of field inspections are made to assure consistent treatment and uniformity within a neighborhood or market area. Changes to specific property for these reasons may also trigger an inspection or review of the market area where the property is located. This assists in identifying potential global benchmark changes that may necessitate review and/or changes of other properties for consistency. Account totals are fluid and areas will be reviewed and adjusted annually to incorporate new accounts.

Two commercial appraisers are paired to perform an average of 6,000 commercial and industrial real property field inspections over an eight-week period. During this time, field work is prepared by generating PRC and organizing them in driving order by area, street name and odd/even address numbers then placed in address number order by taxpayer assistance staff. GIS staff then create field maps and merge the PRC with the maps. Once complete, the field work is uploaded onto iPads.

2025 Commercial / Industrial Real Property Field Inspections

Field inspections for approximately 6,120 existing business personal property accounts is performed from October through December. These inspections consist of verifying business status, location, name change, etc. New businesses and relocated businesses are also noted at during this time.

3.8 TESTING FOR UNEQUAL APPRAISALS

Testing for Unequal Appraisals of Sold and Unsold Properties Government Code Section 403.302 requires the Comptroller's office to ensure that "different levels of appraisal on sold and unsold property do not adversely affect the accuracy of the study." Differing levels of appraisal are often referred to as unequal appraisal, and the most common cause of unequal appraisal is selective reappraisal of sold property.

Prior to an SDPVS year, PTAD must determine whether sold and unsold properties are being appraised at different levels in the categories and ISDs that are to be tested. The <u>IAAO Standard on Ratio Studies</u>, Appendix E, Section 1 (2013) details the three tests used.

3.8.1 ALTERNATE TEST

The alternate test is a comparison of average value changes, that evaluates the average percentage change in appraised values of sold and unsold properties from year to year. If the appraised values of sold properties increased at a significantly greater rate than unsold properties in the same stratum, sales chasing is a likely conclusion.

IAAO states that the distribution of value changes for sold and unsold properties can be compared, or statistical tests can be used to determine whether the distributions are different at a given level of confidence.

3.8.2 DISTRIBUTION TEST

The Distribution Test is the comparison of observed versus expected distribution of ratios. This test looks for sales ratios that fall within a particularly narrow range of the mean given the lowest likely standard deviation as a strong indication of the likelihood of sales chasing.

IAAO states that with a standard deviation of five percent given a normal distribution, about 32 percent of the ratios would be expected to fall within plus or minus two percent of the mean. Finding such a high concentration of ratios around any measure of central tendency is a strong indicator of sales chasing or of a non-representative ratio study. IAAO suggests that such results call into question the representativeness of the ratio study and additional tests should be instituted.

3.8.3 MANN-WHITNEY TEST

The Mann-Whitney Test is a comparison of average unit values and is used to compare differences between two independent groups when the dependent variable is either ordinal or continuous, but not normally distributed. In the appraisal of sold and unsold properties, the dependent variable is changes in value and the independent variable is the properties, which has two groups: sold and unsold.

IAAO states that the Mann-Whitney test can be conducted to determine if there is a statistically significant difference in the distribution of value change of these properties.

4. VALUATION PROCESSES

4.1 REAL PROPERTY VALUATIONS

The Residential Appraisers are responsible for developing the equal and uniform market values for vacant and improved land within the county. The staff generally values residential single family, townhomes, condominiums, multifamily housing other than apartments, and manufactured homes.

In Texas, a manufactured home is considered personal property if it's on land that the homeowner doesn't own or lease, and it hasn't been converted to real property through the Texas Department of Housing and Community Affairs (TDHCA). The Manufactured Housing Division (MHD) of the TDHCA regulates manufactured homes, which are also known as mobile homes in Texas law.

The department is made up of appraisers and support technicians. Data collected during the fieldwork and analysis phases of the appraisal calendar is stored in the CAMA database and utilized to provide market values each year.

Residential sales are best interpreted and applied using two generally accepted appraisal techniques known as the cost and market (also known as comparable sales approach).

The cost approach is a real estate valuation method that estimates the price a buyer should pay for a piece of property is equal the cost to build an equivalent building. In the cost approach, the property's value is equal to the cost of land, plus total costs of construction, less depreciation.

The market approach is a valuation method that compares an asset to similar assets that have been sold recently or are still available in the market. It is also known as the market comparison approach or the market-based approach.

4.1.1 LAND ANALYSIS

Land valuation analysis is conducted prior to neighborhood sales analysis. Data on regional economic forces such as demographic patterns, regional location factors, employment and income patterns, general trends in real property prices and rents, interest rate trends, availability of vacant land, and construction trends and costs are collected from private vendors and public sources and provide the field appraiser a current economic outlook on the real estate market. The value of the land component to the property is estimated based on available market sales for comparable and competing land under similar usage. A comparison and analysis of comparable land sales is conducted based on a comparison of land characteristics found to influence the market price of land located in the neighborhood. Specific land influences are considered, where necessary, and depending on neighborhood and individual lot or tract characteristics, to adjust parcels outside the neighborhood norm for such factors as access, view, shape, size, and topography. The appraisers use abstraction and allocation methods to insure that estimated land values best reflect the contributory market value of the land to the overall property value.

An example using a subject single-family residential property sold for \$150,000 Using a land to total sale price ratio of 1:5, the land value would be \$30,000 150,000 sale price / 5 = 30,000

Vacant land valuation is guided by the principle of substitution and the analysis of known and available sales prices within market areas defined by similar factors such as: location, zoning, economics, and land or building uses.

4.1.2 MARKET AND NEIGHBORHOOD ANALYSIS

Market and neighborhood analysis involves the examination of how physical, economic, governmental, and social forces and other influences affect property values. The effects of these forces are also used to identify, classify, and stratify comparable properties into smaller, manageable subsets of the universe of properties known as neighborhoods. Market analysis is conducted on these well-defined areas within the county. Analysis of comparable market sales data forms the basis of estimating market activity and the level of supply and demand affecting market prices for any given market area. Market sales reflect the effects of these market forces and are interpreted by appraisers into an indication of market value ranges for all defined market areas.

4.1.2.1 MARKET AND SUBMARKET AREAS

JCAD has established fifteen market areas that are further defined into submarket areas. Market area adjustments are not limited to these market areas and new market areas may be defined or created if current market data reflects the need for such.

The first step in market analysis is the identification of a group of properties that share certain common traits. Market Areas and Submarket Areas are utilized for sales analysis purposes and are defined as a geographic grouping of properties where the property's physical, economic, governmental, and social forces are generally similar and uniform. Once market and submarket areas with similar characteristics have been identified, the next step is to define its boundaries. This process is known as "delineation". Common factors used in market and submarket area delineation include location, sales price range, lot size, age of dwelling, quality of construction and condition of dwellings, square footage of living area, and story height. Delineation involves the physical drawing of market and submarket areas on a map, but it can also involve statistical separation or stratification based on attribute analysis. Market and Submarket Area identification and delineation is the cornerstone of the residential valuation system.

Market Areas Submarket Areas

2025-2026 REAPPRAISAL PLAN

4.1.2.2 NEIGHBORHOODS

The first step in neighborhood analysis is the identification of a group of properties that share certain common traits. A "neighborhood" for analysis purposes is defined as the largest geographic grouping of properties where the property's physical, economic, governmental, and social forces are generally similar and uniform. Some factors used in neighborhood delineation include location, sales price range, lot size, age of dwelling, quality of construction and condition of dwellings, square footage of living area, and story height. Delineation involves the physical drawing of neighborhood boundary lines on a map, but it can also involve statistical separation or stratification based on attribute analysis.

Part of neighborhood analysis is the consideration of discernible patterns of growth that influence a neighborhood's individual market. Few neighborhoods are fixed in character. Each neighborhood may be characterized as being in a stage of growth, stability, or decline. The growth period is a time of development and construction. As new neighborhoods in a community are developed, they compete with existing neighborhoods. An added supply of new homes tends to induce population shift from older homes to newer homes. In the period of stability, or equilibrium, the forces of supply and demand are about equal. Generally, in the stage of equilibrium, older neighborhoods can be more desirable due to their stability of residential character and proximity to the workplace and other community facilities. The period of decline reflects diminishing demand or desirability. During decline, general property use may change from residential to a mix of residential and commercial uses. Declining neighborhoods may also experience renewal, reorganization, rebuilding, or restoration, which promotes increased demand and economic desirability.

Most residential analysis work is neighborhood specific. Neighborhoods are visually inspected to verify delineations based on observable aspects of homogeneity. Neighborhood delineation is periodically reviewed to determine if further neighborhood specification is warranted. Comparable neighborhoods serve to increase the available market data by linking comparable properties outside a given neighborhood to other similar neighborhoods.

2025-2026 REAPPRAISAL PLAN

4.1.3 HIGHEST AND BEST USE ANALYSIS

The highest and best use (HBU) must be physically possible, legally permissible, financially feasible, and productive to its maximum. The HBU of residential property is often its current use. This is due in part to the fact that residential development, in many areas, through use of deed restrictions and zoning, precludes other land uses. In some instances, there are areas that transition over time from what was initially residential to another use. Appraisal standards require a property to be valued at its HBU, however a Jurisdictional Exception is provided by USPAP when local law requires something contrary to the recognized standard. 23.01(d) of the Texas Property Tax Code also addresses the valuation of residential properties with a homestead based on the residential value regardless of whether that is the HBU of the property. Most urban single-family properties in the county meet a HBU analysis as the current residential use on the date of appraisal. After market analysis, neighborhood delineation, and HBU analysis is complete, the last step in model specification is to identify which model(s) will best replicate the forces of supply and demand and recreate values that closely match the sale prices in the defined areas. Two common models specified in the valuation of single-family residential properties in the county are market modified cost and sales comparison. The sales comparison approach is used on most urban homes in Johnson County while market modified cost is mainly applied to a few historic urban homes and all rural residential properties. Both techniques are detailed in the model calibration section.

4.1.4 MODEL CALIBRATION

In simple terms, mass appraisal is used to represent and compare property characteristics that contribute to value for a group of properties. These may include items such as square footage, quality of construction, lot size, or view. The value of these characteristics allows for comparisons and adjustments when there are differences between other characteristics, which are identified as important contributors to value, can also be represented in this manner to calculate a total value for each property. This valuation is compared to the group of current sales in the same area. Models are calibrated" or adjusted to reflect what the sales are indicating in the market place.

This process of mass appraisal creates a consistent, uniform methodology for analyzing properties which is equitable to property owners because all properties within a category of properties are being treated in the same manner.

4.1.4.1 SALES INFORMATION

Vacant land and improved properties are valued primarily on the sales comparison approach. Sale properties are examined for their attributes and adjusted for their differences.

Rural land valuation is typically accomplished by establishing price per acre tables or lot tables from sales within various defined market areas. This technique allows consistent appraisal across market areas in addition to the ability to change values on multiple properties in an efficient manner.

4.1.4.2 COST SCHEDULES

Residential property within the county begins with an initial valuation from cost schedules that utilize a comparative unit method. Cost schedules are developed and tested each year by compiling known sale prices of new properties within each defined level of quality of construction and correlating the resulting value per square foot data into a table stored within the CAMA system. Tables are also developed

2025-2026 REAPPRAISAL PLAN

through sales analysis to uniformly apply value for added exterior amenities of a home that are desirable and contribute to sale prices.

4.1.4.3 DEPRECIATION

Physical depreciation is expressed as a percentage that is computed and subtracted from estimated replacement cost new. The percentage rate is dependent on the class, condition, effective age, and economic life of an improvement. Depreciation tables are initially developed from CoreLogic publications, set up based on structure classifications, and observed each year through market sales for potential adjustments. The depreciation schedules ensure that all properties within the same quality and condition depreciate at the same level which leads to uniformity within a market area. A critical element in depreciation is commonly referred to as effective age and is the cornerstone on which the schedules are built. Initial construction dictates the actual age of a structure by establishing a base year on which the age can be calculated. Initially, the actual and effective age are the same. However, over time, owners replace, change, or update deteriorating components of a structure which then reduces the effective age of the property as well as the amount of depreciation. Correlations of sales to effective ages of properties are utilized to trend and update depreciation schedules, as necessary.

4.1.4.4 INCOME MODELS

Income models are utilized if there is sufficient data to develop rent multipliers for residential property that is producing income, and there is little or no sales information to rely on a market sales approach to value. Typically, there is substantial residential sales information in rental areas and the income approach is not generally used.

4.1.4.5 RESIDENTIAL MODELS

As mentioned previously, the model specified for most residential properties in the district is the sales comparison. This process facilitates the sales comparison model by providing statistical data for the relevance of various identified property characteristics as well as their associated influence on value. Appraisal literature points to the importance of relying on the market to extract adjustments used in the sales comparison approach that address characteristic differences between properties. For each market area, a model is specified based on the characteristics of value, or variables, which return acceptable analytical statistics. The sales comparison approach can be used to value the properties within the market area by the most comparable sales to each subject property. Often neighborhoods require a market or location adjustment based on sales. Factors that make some neighborhoods more desirable include proximity to schools, lake front properties, near churches, hospitals, shopping etc. Market analysis determines the adjustment based on sales information. These market or location adjustments may be abstracted and applied uniformly within neighborhoods to account for locational variances between market areas.

Model calibration then occurs in two parts. First, during the identification of the comparable sales selection criteria that is input into the CAMA system. For the current reappraisal plan, new variable approaches and combinations in the model will be explored and tested for the possibility of improving regression output statistics and overall appraisal measures of central tendency.

2025-2026 REAPPRAISAL PLAN

Properties that are not valued by the sales comparison model are valued using the market modified cost model. Neighborhood, or market adjustment factors are developed from appraisal statistics provided from ratio studies and are used to ensure that calculated values are consistent with the market. This approach accounts for neighborhood market influences not particularly specified in a purely cost model.

The following equation denotes the hybrid model used:

$$MV = LV + (RCN - AD)$$

Whereas, in accordance with the cost approach, the estimated market value (MV) of the property equals the land value (LV) plus the replacement cost, as new of property improvements (RCN) less accrued depreciation (AD). As the cost approach separately estimates both land and building contributory values and uses depreciated replacement costs, which reflect only the supply side of the market, it is expected that adjustments to the cost values may be needed to bring the level of appraisal to an acceptable standard as indicated by market sales. Thus, demand side economic factors and influences may be observed and considered.

4.1.4.6 RATIO STUDIES

Ratio studies are conducted in accordance with the current Standard on Ratio Studies from the IAAO. Each year, prior to the generation of Notices of Appraised Value, market values are reanalyzed by staff appraisers using ratio studies to examine the appraisal accuracy and uniformity on an overall basis as well as by market area within property tax division (PTD) categories. Ratio studies compare assessment value based on January 1st to sales of similar properties to ensure that appraised values are accurate.

Sales ratios are generated for each neighborhood to review general market trends and provide an indication of market appreciation or depreciation over a specified period of time. Sales Ratio Summary Reports calculate arithmetic mean, weighted mean and median along with the coefficient of dispersion (COD) for sold properties. COD is the ratio of the average deviation from the median to the median of the data set. The COD measure how far away the median of a data point.

Ratio studies are compared to the state mandated range of 95%-105%. Neighborhoods that fall outside the mandated range are adjusted.

JCAD value / Sales Price = ratio example: \$863,090 (JCAD) / \$900,000 (Sale Price) = .95 ratio)

Texas Property Tax Law Sec. 403.302:

Determination of School District Property Values

(c) If after conducting the study the comptroller determines that the local value for a school district is valid, the local value is presumed to represent taxable value for the school district. In the absence of that presumption, taxable value for a school district is the state value for the school district determined by the comptroller under Subsections (a) and (b) unless the local value exceeds the state value, in which case the taxable value for the school district is the district's local value. In determining whether the local value for a school district is valid, the comptroller shall use a margin of error that does not exceed five percent unless the comptroller determines that the size of the sample of properties necessary to make the determination makes the use of such a margin of error not feasible, in which case the comptroller may use a larger margin of error.

2025-2026 REAPPRAISAL PLAN

4.1.4.7 RECONCILIATION AND VALUATION

Based on the results of the analysis on available market data, appraisers can adjust values as necessary to systematically apply land values to the properties within the county in an efficient manner.

4.1.5 SPECIAL APPRAISALS

4.1.5.1 BUILDER'S INVENTORY

Builder's Inventory is a special valuation is given to owners who request it and are typically builders and developers. Each year, known bulk sales of residential properties are analyzed to determine discount factors to apply based on supply in the area, current demand, typical holding periods, and typical build out timeframes. Once factors are established, all single-family residential properties that are/were owned on the first of the year by a known builder or developer are identified and the factors are applied to the selected properties. Those properties are then sent the notice of value for the year with the calculated discount applied.

Sec. 23.12. Inventory.

(a) Except as provided by Sections 23.121, 23.1241, 23.124, and 23.127, the market value of an inventory is the price for which it would sell as a unit to a purchaser who would continue the business. An inventory shall include residential real property which has never been occupied as a residence and is held for sale in the ordinary course of a trade or business, provided that the residential real property remains unoccupied, is not leased or rented, and produces no income.

4.1.5.2 AGRICULTURAL LAND

If property is devoted principally to agricultural (ag) use to the degree or intensity generally accepted in the area for five of the preceding seven years, it is eligible for special valuation, called productivity value. As such, the appraised value is determined to be what the property would sell for but only considering its value as an agricultural property (productivity). Agricultural valuation is based on net-to-land calculations, which take either rental rates and subtract typical expenses to arrive at an income to an investor, or they are computed by taking yields and crop prices typical of the county and subtracting expenses to arrive at income to a farmer. These calculations are done for several categories of improved and native pasture, dry crop, and wasteland. If a property is approved for productivity value, then the value per acre is applied by tables, depending on the quality and type of agricultural land present. Rental rates per acre, if used, are derived from JCAD surveys and supplemental agricultural applications. This approach is an income approach but is based on a predetermined (agricultural) HBU, which may, or may not be the HBU for the land.

4.1.5.3 WILDLIFE MANAGEMENT

Per Texas Property Tax Code Section 23.521, the Comptroller by rule, shall adopt the standards by the Texas Parks and Wildlife Department. Land owners must prepare a written wildlife management plan and submit to the Chief Appraiser. Plans typically include erosion, habitat, and predator control. Land must be qualified for agricultural appraisal (also called 1-d-1 Open Space Agricultural Appraisal) at the time the property owner changes to wildlife use.

4.2 COMMERCIAL AND INDUSTRIAL REAL PROPERTY VALUATIONS

The JCAD commercial appraisers and CAGI appraisers work together to develop the equal and uniform market values for improved commercial and industrial property within the county including apartments, office, retail, warehouse/manufacturing, and various other categories of business-related facilities. Data collected during the fieldwork and analysis phases of the appraisal calendar is stored in the CAMA database and utilized to provide market values each year.

4.2.1 AREA ANALYSIS

Data on regional economic forces such as demographic patterns, regional location factors, employment and income patterns, general trends in real property prices and rents, interest rates, discount rates, and financing trends, availability of vacant land, and construction trends and costs are collected from private vendors and public sources. More detailed analysis by property type and various categories is then undertaken to determine what model recalibration and specification will need to occur during the upcoming valuation cycle.

4.2.2 NEIGHBORHOOD AND MARKET ANALYSIS

A commercial neighborhood, market, or economic areas are defined by properties with similar business functions. Market analysis involves the examination of how physical, economic, governmental, and social forces influence or affect property values. The effects of these forces are used to determine the HBU for a property, and to select the appropriate sale, income, and cost data in the valuation process. Smaller commercial properties in residential market areas would be adjusted since they are not in a typical commercial area. For example, beauty shops, convenience stores, retail stores, etc.

Commercial / Industrial Market Areas

Commercial / Industrial Neighborhoods

2025-2026 REAPPRAISAL PLAN

4.2.3 HIGHEST AND BEST USE ANALYSIS

The HBU is the most reasonable and probable use that generates the highest present value of the real estate, as of the date of valuation. HBU of any given property must be physically possible, legally permissible, financially feasible, and maximally productive. HBU will generate the highest net return to property over time. The appraiser must consider the most probable use that is permitted under local administrative regulations and ordinances. While its current zoning regulation may restrict a property's use, the appraiser may also consider the probability that the zoning could be changed, based on activity in the area. A property's current use is often the HBU due to zoning regulations.

However, there are times when the market and zoning changes proposed and allowed by a city have defined areas in transition where the HBU may not reflect the actual use of the property at the time of appraisal.

After market analysis, neighborhood delineation, and HBU analysis is complete, the last step in model specification is to identify which model(s) will best replicate the forces of supply and demand and recreate values that closely match the sale prices in the defined areas. The commercial department utilizes the cost, market modified cost, sales comparison, and income approaches to value when determining which specific models will be applied to the various properties. Property type, use, and availability of data are factors which typically drive the specification process.

HBU ensures that an accurate estimate of market value, sometimes referred to as value in exchange (not to be confused with value in use) is derived.

<u>Value in Exchange:</u> The economic value of a product or service. It is determined based on the market price that buyers are willing to pay for a product or service, and it is influenced by factors such as demand, supply, competition, and market conditions. The value in exchange is typically measured in monetary terms, such as dollars.

<u>Value in Use:</u> represents the value of a property to a specific user for a specific purpose also defined as an asset valuation concept that represents the net present value of future cash flows or benefits an asset generates for a specific owner under a specific use. This perspective for value may be significantly different than market value, which approximates market price under the following assumptions: (i) no coercion of undue influence over the buyer or seller in an attempt to force the purchase or sale, (ii) well-informed buyers and sellers acting in their own best interests, (iii) a reasonable time for the transaction to take place, and (iv) payment in cash or its equivalent.

4.2.4 MODEL CALIBRATION

Data collection and documentation for commercial and industrial property is continually updated, providing a uniform system of categorizing a multitude of components. All properties are classed by appraisers according to their specific property type, such as gas stations, office, retail, storage, warehouse, etc. The approaches to value are structured and calibrated based on that classification.

4.2.4.1 COST SCHEDULES

The cost approach to value is applied to all improved real property by utilizing the comparative unit or square foot method to determine replacement cost new. Replacement cost new should include all direct and indirect costs, including materials, labor, supervision, architect, and legal fees, overhead and a reasonable profit. Development of a comparative cost unit for each building class involves the utilization

2025-2026 REAPPRAISAL PLAN

of national cost data reporting service, CoreLogic, as well as consideration of actual cost information on comparable properties within the county. A base cost rate has been developed for each building class and represents the replacement cost per unit for a benchmark property for each class. Date and location modifiers are necessary to adjust cost data to reflect conditions in a specific market and changes in costs over time. Since CoreLogic is used as a basis for the cost models, location modifiers are necessary to adjust these base costs specifically for Johnson County. CoreLogic provides these modifiers and they are verified with any known local sales obtained by the appraisal district.

4.2.4.2 INCOME VALUATION

The income approach requires the appraiser to estimate the rental income from a property and capitalize the income into an estimate of current value. Market Rent is the rent currently prevailing in the market for properties comparable to the subject property. Market rent is capitalized into an estimate of value in the income approach. Capitalization is the conversion of income into estimated present value in the income approach. If expense data is available, the steps in this approach are as follows, per IAAO:

- Estimate gross income, expenses, and net income from market data.
- Apply the direct capitalization method, which is the process of converting income to value in the income approach by dividing a current income figure by a market derived overall rate.
- Estimate a capitalization rate or income multiplier (model calibration)
- Capitalization Rate: The rate used to convert income to value in the income approach.
- Compute valuation by capitalization.

Income / Rate = Value

4.2.4.3 SALES INFORMATION

Current market activity including sales of commercial properties, new construction, new leases, lease rates, absorption rates, vacancies, allowable expenses (inclusive of replacement reserves), expense ratio trends, and capitalization rate studies are analyzed to determine market ranges in price, operating costs, and investment return expectations.

4.2.4.4 DEPRECIATION

Accrued depreciation, commonly referred to as physical depreciation, is expressed as a percentage that is computed and subtracted from estimated replacement cost new. The percentage rate is dependent on the class, condition, effective age, and economic life of an improvement. Depreciation tables are derived from CoreLogic, set up based on structure classifications, and observed each year through market sales for potential adjustments.

Market Value = Land Value + Improvement Value (Reconstruction Cost New (RCN) – depreciation)

4.2.4.5 SALES COMPARISON

An average unit value comparison is performed in addition to a traditional ratio study to determine appraisal performance of sold and unsold commercially classed properties such as apartment, office, retail and warehouse usage or special use.

2025-2026 REAPPRAISAL PLAN

4.2.4.6 RATIO STUDIES

The commercial appraisers perform statistical analysis annually to evaluate whether values are equal and uniform, based on current market value.

Ratio studies are conducted on commercial market areas and/or property type in the district to judge mass appraisal accuracy and uniformity of value. Sales Ratio Summary Reports calculate arithmetic mean, weighted mean and median along with the coefficient of dispersion (COD) for sold properties. COD is the ratio of the average deviation from the median to the median of the data set. The COD measure how far away the median of a data point. Appraisal statistics of central tendency and dispersion generated from sales ratios are available for each classification and are summarized by year. These summary statistics provide the appraisers a tool by which to determine both the level and uniformity of appraised value on a market area basis and consider whether appraised values require adjustments relative to changing market conditions.

JCAD value / Sales Price = ratio example: \$863,090 / \$900,000 = .95 ratio

Ratio studies are compared to the state mandated range of 95%-105%. Classifications that fall outside the mandated range are adjusted.

4.2.4.7 RECONCILIATION AND VALUATION

Based on the market data analysis and the methodology described in the cost, sales, and income approaches, the various models are calibrated, and values are developed for each commercial property. The cost approach model is applied to every improved property. Additional valuation indicators may be developed and applied using the sales comparison and income approaches, depending on the property type and availability of data. The final valuation of a property type is finalized by reconciling these indications of value and considering the weight of the market information available for evaluation and analysis in these approaches to value.

4.3 BUSINESS PERSONAL PROPERTY VALUATIONS

Business personal property is tangible personal property that is used to produce income in the State of Texas such as, furniture, fixtures, equipment, machinery, computers, inventory held for sale or rental, raw materials, finished goods, and work in process.

The BPP owner may elect to have the inventory appraised at its market value as of September 1st of the year preceding the tax year to which the appraisal applies by filing an application with the Chief Appraiser requesting that the inventory be appraised as of September 1st.

The cost approach is the primary valuation approach for business personal property. The replacement cost new (RCN) is developed from property owner reported historical cost.

Trending factors used to develop RCN are based on published valuation guides including, Hot Line Construction Equipment Guide and Hot Line Crane Guide.

Appraisers identify the following for all business personal property, leased asset, vehicle, aircraft, and multi-location asset accounts.

- Type of business
- Fixed assets such as furniture, fixtures, machinery, equipment, and vehicles
- Level of inventory, if any
- Current owner information

Final values may be based on rendered cost, depreciation tables, good faith estimates and/or purchase prices.

Information is obtained from field inspections, newspapers, personal property renditions, sales tax permit listings and from direct communication with taxpayers.

4.3.1 MODEL CALIBRATION

4.3.1.1 SIC CODE ANALYSIS

Standard Industrial Classification (SIC) codes were developed by the federal government to describe property and are used as the basis for classification and valuation of business personal property accounts. SIC code identification and delineation is a critical part of the business personal property valuation system. Analysis work done in association with the valuation process is SIC code specific.

4.3.1.2 DEPRECIATION SCHEDULE

The depreciation schedule is adjusted annually and posted on the JCAD website.

4.3.1.3 VEHICLES

Vehicle values are based on the published valuation guides, RedBook, Just Texas as well as rendered values. Considerations available for high mileage.

4.3.1.4 LEASED AND MULTI-LOCATION ASSETS

Leased and multi-location assets are mainly provided through owner renditions.

2025-2026 REAPPRAISAL PLAN

4.3.1.5 RATIO STUDIES

PTAD conducts a personal property SDPVS ratio study every other year using state cost and depreciation schedules to develop comparative personal property values. The values from the SDPVS are then compared to the JCAD personal property values and ratios are indicated.

4.4 CAGI OIL AND GAS PROPERTY VALUATIONS

Oil and gas properties (commonly referred to as "Minerals") are valued by CAGI The following identifies CAGI's reappraisal plan for these properties.

4.4.1 DATA COLLECTION

As subsurface mineral properties lie within the earth, they cannot be physically identified by inspection like other real property. However, the inability to directly inspect does not appreciably affect the ability to identify and appraise these properties. To identify new properties, CAGI obtains monthly oil and gas lease information from the Railroad Commission of Texas [RRC] to compare against oil and gas properties already identified. The situs of new properties is determined using plats and W-2/G-1 records from the RRC, JCAD GIS data, as well as CAGI's in-house map resources. Relevant characteristics necessary to estimate value of remaining oil or gas reserves are production volume and pattern, product prices, expenses borne by the operator of the property, and the rate at which the anticipated future income should be discounted to incorporate future risk. CAGI obtains information to update these characteristics annually from regulatory agencies such as the RRC, the Comptroller of Public Accounts, submissions from property owners and operators, as well as from published investment reports, licensed data services, service for fee organizations and through comparable properties, when available.

4.4.2 MARKET AREAS

Defining market areas in the district and identifying property characteristics that affect property value in each market area. Oil and gas markets are regional, national, and international. Therefore, they respond to market forces beyond defined market boundaries as observed among more typical real properties.

4.4.3 APPRAISAL METHOD

Developing an appraisal approach that best reflects the relationship among property characteristics affecting value and best determines the contribution of individual property characteristics. Among the three approaches to value (cost, income, and market), the income approach to value is most commonly used in the oil and gas industry. Through use of the discounted cash flow technique in particular, the appraiser can bring together relevant characteristics of production volume and pattern, product prices, operating expenses, and discount rate to determine an estimate of appraised value of an oil or gas property.

4.4.4 COMPARISON AND REVIEW

Use of the income approach is the first step in determining an estimate of market value. After that the appraiser reviews the estimated market value compared to its previous certified value and compares it to industry expected payouts and income indicators. The appraiser examines the model's value with its previous year's actual income, expecting value to typically vary within in a range of 2-5 times actual annual income, provided all appropriate income factors have been correctly identified. Finally, periodic reassignment of properties among appraisers and review of appraisals by a more experienced appraiser further expand the review process.

4.5 CAGI INDUSTRIAL PERSONAL PROPERTY VALUATIONS

The reappraisal plan for industrial personal property accounts valued by CAGI. The following identifies CAGI's reappraisal plan for these properties.

4.5.1 DATA COLLECTION

Appraisal of properties is limited to those indicated in the contract with the appraisal district, unless additionally requested by the appraisal district. Newly discovered properties will be discussed with the appraisal district to confirm they are to be appraised by CAGI. Through inspection the appraiser identifies personal property to be appraised. The appraiser begins with properties from the previous tax year and identifies new properties from visual identification and/or publications, newspaper articles, or information obtained through the interview of property owners. The appraiser may also refer to other documents, both public and confidential, to assist in identification of these properties. Such documents might include but are not limited to the previous year's appraisal roll, vehicle listing services and private directories.

Data identifying and updating relevant characteristics of the subject properties are collected as part of the inspection process through directories and listing services as well as through later submissions by the property owner, sometimes including confidential rendition. These data are verified through previously existing records and through public reports.

4.5.2 MARKET AREAS

Market areas for industrial personal property are generally either regional or national in scope. Published price sources are used to help define market areas.

4.5.3 APPRAISAL METHOD

Developing an appraisal approach that reflects the relationship among property characteristics affecting value and determines the contribution of individual property characteristics. Personal property is appraised using replacement/reproduction cost, as new less depreciation models. Income approach models are used when economic and/or subject property income is available, and a market data model is used when appropriate market sales information is available.

4.5.4 COMPARISON AND REVIEW

The appraiser reconciles multiple models by considering the model that best addresses the individual characteristics of the subject property. Year-to year property value changes for the subject property are examined using computer-assisted statistical review. Periodic reassignment of properties among appraisers or the review of appraisals by a more experienced appraiser also contributes to the review process.

4.6 CAGI INDUSTRIAL REAL PROPERTY VALUATIONS

4.6.1 DATA COLLECTION

Appraisal of properties is limited to those indicated in the contract with the appraisal district, unless additionally requested by the appraisal district. Newly discovered properties will be discussed with the appraisal district to confirm they are to be appraised by CAGI. Industrial properties are identified as part of the appraiser's physical inspection process each year and through submitted data by the property owner. The appraiser may also refer to legal documents, photography, and other descriptive items.

Identifying and updating relevant characteristics of each property in the appraisal records: The appraiser identifies and updates relevant characteristics through the inspection process. Confidential rendition, assets lists and other confidential data also provide additional information. Subject property data is verified through previously existing records and through published reports.

4.6.2 MARKET AREAS

Market areas for industrial properties tend to be regional, national, and sometimes international. Published information such as prices, financial analysis and investor services reports are used to help define market area.

4.6.3 APPRAISAL APPROACH

Developing an appraisal approach that reflects the relationship among property characteristics affecting value and determines the contribution of individual property characteristics. Among the three approaches to value (cost, income, and market), industrial properties are most appraised using replacement/reproduction cost, as new less depreciation models because of readily available cost information. If sufficient income or market data are available, those appraisal models may also be used.

4.6.4 COMPARISON AND REVIEW

The appraiser considers results that best address the individual characteristics of the subject property and that are based on the most reliable data when multiple models are used. Year-to year property value changes for the subject property are examined using computer-assisted statistical review. Periodic reassignment of properties among appraisers or the review of appraisals by a more experienced appraiser also contributes to the review process.

4.7 CAGI UTILITY, RAILROAD AND PIPELINE PROPERTY VALUATIONS

4.7.1 DATA COLLECTION

Appraisal of properties is limited to those indicated in the contract with the appraisal district, unless additionally requested by the appraisal district. Newly discovered properties will be discussed with the appraisal district to confirm they are to be appraised by CAGI. Utility, railroad, and pipeline properties that are susceptible to inspection are identified by inspection. The appraiser may also refer to other documents, both public and confidential to assist in identification of these properties. Due to the varied nature of utility, railroad, and pipeline properties there is no standard data collection form or manual. New permitting documents on record with the Railroad Commission of Texas provide a source to identify potential new pipeline projects but does not provide indication if the project was started, completed, or a distinct location of the proposed project. Every effort is made to discover new utility, railroad, and pipeline properties through personal observation combined with permitting documents. Identifying and updating relevant characteristics of each property in the appraisal records: The appraiser identifies and updates relevant characteristics through data collected as part of the inspection process and through later submissions by the property owner, sometimes including confidential rendition. Additional data are obtained through public sources, regulatory reports and through analysis of comparable properties.

4.7.2 MARKET AREAS

Market areas for utility, railroad and pipeline property tend to be regional or national in scope. Financial analyst and investor services reports are used to help define market areas.

4.7.3 APPRAISAL APPROACH

Developing an appraisal approach that reflects the relationship among property characteristics affecting value and determines the contribution of individual property characteristics. For all three types of property, the appraiser must first form an opinion of HBU. Among the three approaches to value (cost, income, and market), pipeline value is calculated using a replacement/reproduction cost, as new less depreciation model [RCNLD]. In addition to the RCNLD indicator, a unit value model may also be used if appropriate data are available. Utility and railroad property are appraised in a manner similar to pipeline except that the RCNLD model is not used.

4.7.4 COMPARISON AND REVIEW

The appraiser considers results that best address the individual characteristics of the subject property when multiple models are used. Year-to year property value changes for the subject property are examined using computer-assisted statistical review. Periodic reassignment of properties among appraisers or the review of appraisals by a more experienced appraiser also contributes to the review process. These types of property are also subject to review by the Property Tax Division of the Texas Comptroller's Office through their annual Property Value Study.

5.0 CERTIFICATION STATEMENT

"I, Jim Hudspeth, Chief Appraiser for the Central Appraisal District of Johnson County, solemnly swear that I have made or caused to be made a diligent inquiry to ascertain all property in the district subject to appraisal by me, and that I have included in the records all property that I am aware of at an appraised value which, to the best of my knowledge and belief, was determined as required by law."

/ Jim Hudspeth, Executive Director / Chief Appraiser

APPENDIX B: APPRAISAL CALENDAR

AUGUST	Prepare Reappraisal Plan (odd years only) - Due by Sept 1
	Mail 10% Penalty Letters for Late Ag Applications - send list to the tax office
	Remove ag from new owners with no application on file
	Update Cost Schedules and Depreciation Schedules
	Mail out Income Producing Questionnaires
	Field work begins:
	2025 Tax Year 2026 Tax Year
	August 5, 2024 August 11, 2025
	Prepare to receive email on "Alternate" test if applicable
SEPTEMBER	SEPT 1 - Statutory Appraisal date for Sec 23.12(f) properties (heavy equipment)
	Schedule Ag Board Meeting
OCTOBER	Farm & Ranch Survey
	Schedule Ag Board Meeting to complete and discuss form with Ag Board
NOVEMBER	Annual employee performance reviews
	Review BPP renditions - check for correct return address
	Mail Ag Lease Questionnaire
	Mail survey letter for Office / Retail / Cat B properties
DECEMBER	Check for USPAP updates
	Check for Property Assessment Valuation updates
	Update Work Plan dates / with Data Operations Manager
	Annual renewal of Hotel Factbook, CoreLogic (M&S), Airplane FFA list and Just Texas
	Mail Freeport letters
	Mail Abatement letters
	Mail Special Inventory Packets
	Mail MHP Rendition letters
	Mail Antique Mall letters
	Post BPP Depreciation/Description Schedule to website
	Appraisal field work to be completed:
	2025 Tax Year 2026 Tax Year
	December 31, 2024 December 31, 2025
JANUARY	JAN 1 - Statuary Appraisal Date (except for properties appraised under Sec 23.12(f))
	Mail agriculture letters and applications on accounts required to apply
	Coordinate calendar with CAGI
	Mail BPP letter and Renditions
	Post Low Income Housing Cap on website
	Sales Submission Due:
	2025 Tax Year 2026 Tax Year
	January 31, 2025 January 30, 2026
FEBRUARY	Check Comptroller for Special Valuation (Ag) Cap Rates
	Update cap rate on all ag instructions (10%) example: bee information
	Coordinate Ag values with Perdue after survey deadline
	Mail airplane renditions

2025-2026 REAPPRAISAL PLAN

MARCH	Run Stratification reports
	Review and update statutory notices of appraised value
	Deadline for appraisers to submit changes to data entry:
	2025 Tax Year 2026 Tax Year
	March 28, 2025 March 27, 2026
APRIL	APR 1 or as soon as practicable - Mail Residential Property Notices
	APR 1 or as soon as practicable - Mail 2nd letter for Freeport/Abatement/MH Parks
	Process Real Property Notices of Appraised Value:
	2025 Tax Year 2026 Tax Year
	April 7, 2025 April 7, 2026
	Update Annual Report
	APR 15 - Deadline for Renditions / Rendition Extension Requests to be submitted
	APR 30 - Submit estimates of taxable value to entities
	APR 30 - Deadline for exemption applications
	APR 30 - Deadline for Ag applications to be timely submitted
MAY	Prepare Mass Appraisal Report for Chief Appraiser including current year sales data
	Mail certified ag letters on accounts required to apply but have failed to do so
	Mail certified ag denial and removal letters
	MAY 15 - Deadline for BPP Renditions that requested an extension
	MAY 15 or 30 days after date of Notice of Appraised Value - Protest deadline
	ARB Hearings begin
	Process BPP Notices of Appraised Value:
	2025 Tax Year 2026 Tax Year
	May 27, 2025 May 27, 2026
JUNE	Mail BPP Notices of Appraised Value:
	2025 Tax Year 2026 Tax Year
	June 2, 2025 June 1, 2026
	Verify receipt of annual exemption applications
JULY	BPP Protest Deadline
	2025 Tax Year 2026 Tax Year
	July 2, 2025 July 1, 2026
	Run Stratification reports
	On or before July 20 - Appraisal Review Board approves appraisal records
	Late Ag & Freeport Applications are no longer accepted after ARB approval of records
	On or before July 25 - Certify the Appraisal Roll and submit to entities
	Sales Submission and EARS Deadline
	2025 Tax Year 2026 Tax Year
	July 31, 2025 July 31, 2026

^{*} Category result not calculated. Calculation requires a minimum of five ratios from either of the following:

Categories representing at least 25 percent of total CAD category value.

[·] Five ISDs or half the ISDs in the CAD, whichever is less

^{* *}Statistical measures may not be reliable when the sample is small

APPENDIX E: 2024 MAP REVIEW EXIT FORM

2024 MAP Review Exit Form

Jim Hudspeth

Name

Central Appraisal District Of Johnson County

Tasha Wellborn 3/8/24

Date

Name

The MAP reviewer has discussed with me the mandatory item determinations and 2024 MAP review question responses based upon the review of data submitted and the reviewer's on-site work for the 2024 MAP review. The chart below indicates failed mandatory items (Fail) and review questions that were not passed (No).

I understand that the answers to review questions and mandatory items as determined by the MAP reviewer are subject to approval by Property Tax Assistance Division management.

I understand that after issuance of the preliminary report, additional documentation may be submitted for review no later than Nov. 1, 2024, that may change review question responses in the final report. Any documentation received after Nov. 1, 2024, may not have an impact on the final report.
