SCOPE OF WORK

CITY OF CAMAS NORTHSHORE AND CROWN BOOSTER TRANSMISSION MAIN

PROJECT UNDERSTANDING

The City of Camas wishes to complete the design and construction of two segments of waterline. One of the segments is the Northshore Transmission Main, which will connect the 542 Gregg and 544 Lacamas Zones at the north end of Lacamas Lake, and the other segment is called the Crown Road Booster Transmission Main, which will improve flow into the 542 Gregg Zone from the Crown Road Booster Station.

The Northshore Transmission Main will connect to piping from the 544 Lacamas Zone on NE 28th Street in Clark County. The piping is currently installed just past Juniper Street, but another development will be installing some additional footage bringing the piping to approximately 200 feet from the intersection with NE 232nd Avenue. From NE 28th Street the new pipeline will be aligned along NE 232nd Avenue to the existing 542 Gregg Zone piping that serves the elementary school where North Shore Boulevard meets NE 232nd Avenue. The alignment of the waterline will likely be in one of the travel lanes of NE 232nd Avenue. There are two culverts under the roadway to accommodate two small streams. The overall length of the proposed line is approximately 5,000 feet of 24-inch pipe.

The Crown Road Booster Transmission Main Project is less well-defined, but it could include upsizing piping along NE 43rd Avenue and SE 15th Street (as shown in the City's *Water System Plan Capital Improvement Plan* as Projects NS-1 A and B). The intent of the Project is to increase the transmission capacity of the Crown Road Booster to supply more flow to the 542 Gregg Zone, the 544 Lacamas Zone when the Northshore Transmission Main is completed, and possibly to the Butler Reservoir.

As part of the design effort, the City would like to have a hydraulic modeling analysis completed to determine the most cost-effective piping project to increase Crown Road's capacity. The analysis would include the two aforementioned upsizing Projects, but could also include other piping alignments such as extending piping from the 24-inch transmission main at SE 283rd Avenue and SE Woodburn, to the intersection of SE 283rd Avenue and SE Nourse Road, or possibly other places within the 542 Gregg Zone piping system.

For the purposes of the design portion of the following presented Scope, the Crown Road Booster Transmission Main Design will be performed under a separate Contract after the alignment has been identified by the previously described modeling effort.

This Scope assumes that the two Pipe Projects will be bid separately.

More specifically, the work will include the following.

DESIGN

Task 1 – Project Management and Oversight

Provide overall Project management and oversight of the Project work by the Principal-in-Charge and senior staff members. Services are to include the following.

- Procure sufficient staff resources to dedicate to the Project.

- Manage and provide monthly progress reports and invoices.

Task 2 – Hydraulic Modeling

Determine the optimal Piping Project (including alignment and sizing) to convey water from the Crown Road Booster Station.

- A. Perform hydraulic modeling of the existing piping configuration, both with, and without the Northshore Transmission connection, to ascertain segments with high velocities and headlosses indicating that they are undersized.
- B. Identify potential piping improvements to address the undersized pipes identified in A (above).
- C. Provide a Technical Memorandum for City staff review and comment.
- D. Obtain City comments and perform additional hydraulic modeling to verify Final Recommendations.
- E. Finalize the Technical Memorandum and provide to City.

- A. Provide written requests for all utility purveyors known to provide utility service in the Project area.
- B. Review data provided by utility purveyors and incorporate into Project Design as may be applicable.

Task 4 – Geotechnical Investigation and Report

Conduct field explorations to determine Design Recommendations to support the proposed water main improvements and asphalt reconstruction, as well as establishing groundwater levels and character of subsurface material. This Task will culminate in the preparation of a Final Geotechnical Report in City-approved format. Services are to include the following.

- A. Perform a geotechnical analysis, using PanGEO, Inc. as a Geotechnical Subconsultant, in order to determine existing subsurface conditions. A total of up to five test borings (20 to 25 feet deep) will be reviewed and analyzed in, and along the Project corridor. The City will provide 1-CALL service.
- A. Laboratory testing – Conduct appropriate laboratory tests on selected samples in accordance with the appropriate American Society for Testing and Materials (ASTM) methods. Natural moisture content and grain size distribution tests will be conducted on soil samples. Other laboratory tests will be performed on an as-needed basis, based on the types of soils encountered.
- B. Engineering analyses – Perform engineering analyses to address Geotechnical Engineering issues that may be associated with the Project improvements. These include the Foundation Design for new buried City-owned utilities, backfill requirements, dewatering, and subgrade preparation requirements for pavement and sidewalks.
- C. Report – PanGEO, Inc. will prepare a Draft Report which will be submitted to the City by Gray & Osborne. The Draft Report will summarize the results of the Geotechnical Study and include a site map with approximate test bore locations, description of surface and subsurface conditions (soil and groundwater), existing pavement thickness, design parameters, and earthwork recommendations. Gray & Osborne will

submit one copy of the Draft Report to the City for its review. Our Subconsultant, PanGEO, Inc., will revise the Draft Report to address review comments provided by the City and/or Gray & Osborne. Gray & Osborne will submit three copies of the signed and stamped Final Report to the City.

NOTE: The geotechnical work is for geotechnical evaluation of physical soil properties only. Evaluation of contaminated soils, fill, and groundwater are specifically excluded from this Task.

Task 5 – 50 Percent Design

Prepare 50 Percent Design effort drawings of the proposed water main alternatives for City review of the Northshore Project.

- A. Base map – Incorporate all utility as-built information, plat map (property line) information, survey data, and other available and relevant information into the development of a base map.
- B. Water main alignment – Prepare layouts and full-size drawings of Waterline Design representing a 50 Percent Design effort to include alignment, profile, and typical cross sections illustrating the proposed improvements. These proposed improvements will be designed on the base map developed from the Project survey.
- C. Specifications (Draft) – Prepare 50 Percent Draft Project Specifications in WSDOT format referencing the *2023 Standard Specifications for Road, Bridges and Municipal Construction*. Specifications to include City-approved Proposal, Contract, and Bonding Documents.
- D. Quantities and Cost Estimates – Calculate Bid Quantities and prepare Preliminary-Level Construction Cost Estimates.
- E. Review Meeting – Meet with City staff as may be required to review Project status and solicit concerns/comments.

Task 6 – 90 Percent Design

Prepare Project Drawings, Specifications, and Cost Estimates of the water main and road restoration representing a 90 Percent Design effort for City review and comment for the Northshore Project. Services are to include the following.

- A. Plans – Prepare Construction Plans in City-approved format to include title sheet, legend, location and vicinity maps, Plan and Profile Sheets, special notes, special details, etc.

- B. Specifications – Prepare Project Specifications in WSDOT format referencing the *2023 Standard Specifications for Road, Bridges and Municipal Construction*. Specifications to include City-approved Proposal, Contract, and Bonding Documents.
