SCOPE OF SERVICES

**EXHIBIT A**  
**SCOPE OF WORK**  
**CITY OF CAMAS**  
**STEP MAIN INSPECTION – DESIGN SERVICES**

**PROJECT UNDERSTANDING**

The Septic Tank Effluent Pump (STEP) line that serves Wafertech, LLC (Wafertech), is experiencing plugging issues due to a buildup of scale. Wafertech primarily discharges industrial wastewater generated from silicon chip manufacturing. The scale is cement-like, and based on the analyses conducted, appears to be predominantly calcium phosphate, calcium silicate, and silica. There is concern that the City's STEP Main into which Wafertech discharges, is also scaled. The Camas STEP Main carries domestic, commercial, and industrial flows from west Camas to the north along Parker Road, then to the southeast along Lake Road south of Lacamas Lake, and then to the south along Everett Road, eventually carrying flow to the wastewater treatment plant (WWTP). The pipe is mostly made of PVC and varies in diameter from 8 inches to 24 inches.

There are challenges assessing the degree of scaling in buried pipe. If severely scaled, it may not be possible to complete the assessment from the interior of the pipe, due to the inability of devices to transit through the pipe. The recommended technology for assessment of the potentially (severely) scaled pipe is pipe penetrating radar (PPR), which can be used to assess the degree of scaling from the exterior of the pipe following excavation. The City has received a proposal from SewerVue Technology (SewerVue), a leading pipe inspection firm, for conducting PPR inspection of the City's STEP lines. Because each scale and pipe is unique (impacting the radar measurements), SewerVue has proposed that the inspection be completed at three locations expected to range from unscaled to highly-scaled, to verify that the technology provides the information desired. Based on consultation with the City, the following locations have been selected.

1. Wafertech's discharge line, near the point of connection to the City's STEP Main, likely severely scaled.
2. A location in the City's STEP Main upstream of Wafertech's discharge coming from Parker Road, a line unlikely to be scaled.
3. A location in the City's STEP Main downstream of Wafertech's connection point, along Lake Road, expected to be moderately scaled.

The locations anticipated for these excavations are shown in the attached figure.

This Scope includes the design of excavation and restoration and traffic control for a Contractor to support this inspection effort. Only Location 3 is expected to require significant restoration and traffic control, as the other two locations are off the road and unpaved.

In addition to these Design Tasks, this Scope includes pre-inspection planning and coordination with SewerVue and the City. It is assumed that SewerVue's effort is contracted directly to the City. Onsite assistance during the excavations and inspections is not included and would be addressed in a separate Scope or Amendment.

It is assumed that the work will be completed by a Contractor selected from the City's small works roster in a competitive bid.

The Scope is provided as follows. Exhibit B (attached), shows the not-to-exceed estimated cost for the effort.
