Water, Sewer, Stormwater & Solid Waste Rate Study Update

Sergey Tarasov, Principal Matthew Hobson, Project Manager Luke Rosson, Analyst

October 16, 2023

- Background
- Overview of the rate setting process
- Summary findings and recommendations
 - » Revenue requirement
 - » Rate design
- Next steps
- Questions / discussion

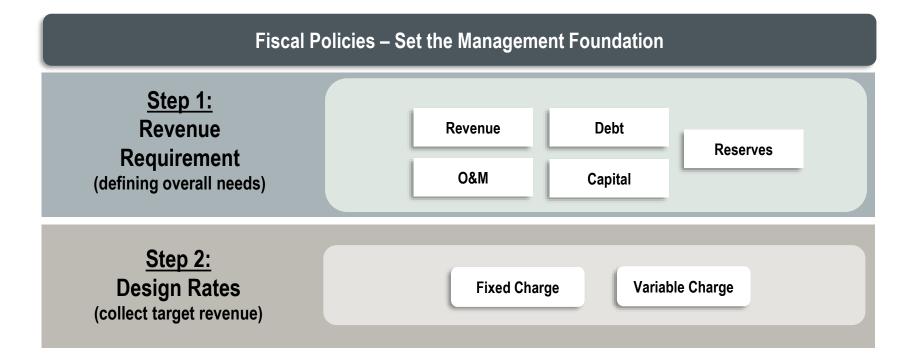

• Previous study completed in 2018

- » Rate adjustments were needed to meet ongoing obligations
- » Reminder: no System Development Charges for Stormwater or Solid Waste
- 2023 rate study update commenced early 2023
 - » 9/5/2023 presented water & sewer revenue requirements
 - » 9/18/2023 presented stormwater & solid waste revenue requirements

Today's focus: direction / input

- » Proposed revenue requirement scenarios
- » Rate design
 - Water tiered rates

- Determine the amount of annual revenue necessary to fund all financial obligations on a <u>standalone basis</u>
 - » Operating expenses
 - » Debt service (principal & interest)
 - » Capital costs and funding approach
- Meet financial parameters and targets
 - » Target debt service coverage ratios
 - » Maintain target reserve balances
- Evaluate revenue sufficiency over a multi-year period
- Develop rate plan to balance financial needs and minimize customer impacts

• Development of fixed and variable charges assessed to customers

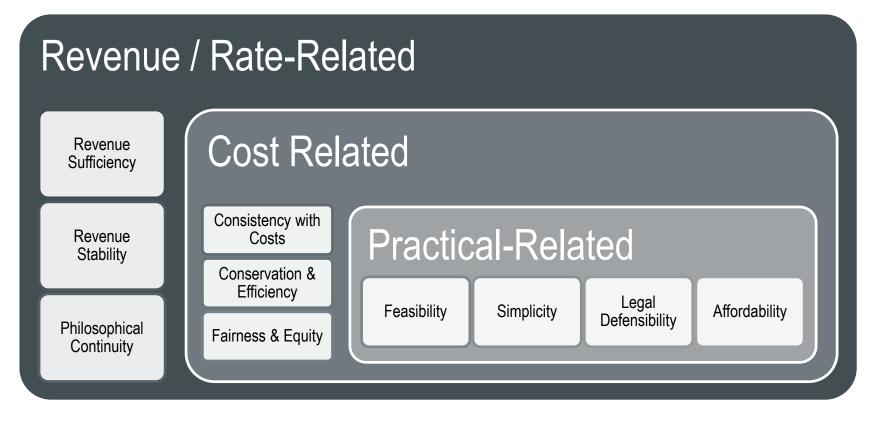

Aligns fixed and variable costs with fixed and variable revenue sources Generates sufficient revenue to meet utility requirements

Meet goals and objectives of the utility (e.g., conservation) Evaluate monthly rate impact for different levels of use

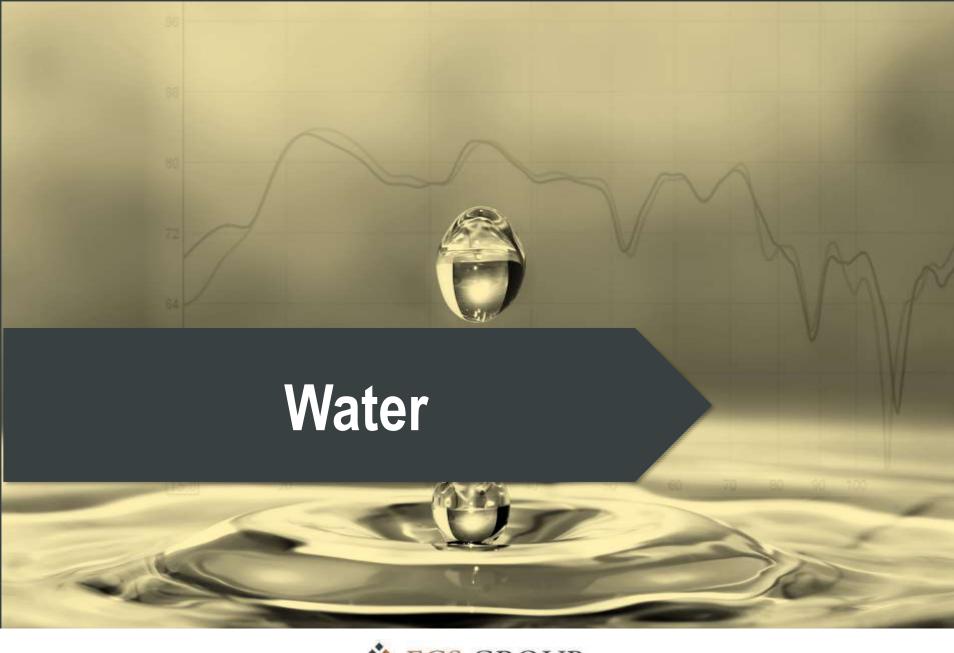

• No structure can completely achieve all the objectives – it's a balancing act

Source: Principles of Public Utility Rates, Bonbright, Danielson and Kamerschen

- No structural changes
 - » Apply increases on an across-the-board basis equally to fixed and variable charges
- Tiered water rates for residential customers
 - » Encourage conservation
 - Pros
 - Discourages wasteful use of resources
 - May defer additional capacity investments in the long term
 - Addresses DOH water use efficiency rules in WSP planning process
 - Cons
 - Initial transition will impact customers differently (higher users pay proportionally more)
 - Reduction of billable volume may impact the overall revenue stability unless elasticity is considered

Scenario for consideration

- » S1: fully fund ongoing obligations and policies
- » S2: increased debt financing and reduced coverage

S1 projects an additional \$5.5MM in revenue bonds in 2029

- S2 projects an additional \$8.1MM in revenue bonds between 2029 and 2031

• Incorporated feedback from the Council

- » Level increases every year
- » Minor deviation from policies for one year

• Key assumptions and data

- » Residential customer class was separated into
 - Single-family residential
 - Multi-family residential
- » Tiered rates were developed for single-family customers only
 - Multi-family customers do not receive a bill directly
 - Multi-family customers do not have yards for irrigation
