

Public Works Monthly Update

Cooler weather and the time change was a welcome sight here at the shop. With the fall temperatures comes fall clean up for a lot of people which often includes leaf removal.

Street Department

The Street Crew a good week for our fall clean up around town. The citizens got brush, old household items, and debris out in a timely fashion which made it easier for the guys. The garbage crew had their share of extra refuse to contend with as well. The Street Crew were able to get the Airport cut & ready for the last Fly-In of the year. They also cut & weedeat the Pavilion for the movie night on the 27th and Trunk or Treat on the 30th. Both of which were a success I might add. They took the leaf machine out for a 1st test run. Leaf season is officially in full swing. They are gearing up for the move as well.

Maintenance

The shop guys have been busy maintaining the vehicles and equipment at the shop as well as vehicles for the Police Dept. They have spent the last two weeks servicing many of the vehicles to ready them for inspection. Chris has been a steady force at the new Town Office building. He has just about finished all of the painting and repainting of the offices as of today. Pictures are in the process of being hung on the wall above the offices in the lobby. He has done a wonderful job with the painting to get the building ready for the move in date of the 13th.

Water Department

The Water Crew have been busy on finishing up the water line install on Grove Ave. After receiving a passing mark on the testing, they will make a service line connection and start on installing the new sewer line. They have had an unusual amount of Miss Utility tickets to mark for the fiber optics being installed through town. They have also been working with the committee on the B St project to help that move forward. They will also be lending a hand with the move on Monday.

Other Updates

The guys at the Waste Water Treatment Plant have been keeping things operating efficiently the last few months. They been able to get a blower motor back from the repair shop and re-installed. They have the press machine running properly again as well. Thanks to the guys for all the hard work.
