

PROGRAM UPDATES

- Three nurse home visitors are now certified Child Passenger Safety Technicians.
- New nurse home visitor is working on completing her Certified Lactation Counselor (CLC) training.
- Participated in the Alachua County World's Greatest Baby Shower event and pre-registered 21 moms.
- Conducted four Infant CPR and Choking Prevention classes. 47 Caregivers have participated. Attendees include 23 moms, 15 dads and 9 grandparents.

SATISFACTION SURVEY COMMENTS

- "The nurse was fantastic. I felt so much more prepared after her visit. Being a first-time mom is intimidating but I got a lot of resources from the nurse and being able to get answers to my questions was amazing. I would recommend this program to friends and family one hundred thousand percent."
- "This program is awesome. I feel so much more confident and supported after my nurse visit. I felt like I got a jump start on a lot of vital resources. I also signed up for the upcoming CPR class in March."
- "Best program for new parents. We would easily recommend program to everyone regardless of the number of children they have."

NewboRN Home Visiting Program

October 2024 – March 2025

SUCCESSES

Mom was using a borrowed bassinet with parts missing and an incorrectly sized mattress. The mattress was not flat. The bed also had stuffed toys in it and loose blankets. Mom was educated about the danger of having loose items in the bed and was given a pack-n-play and sleep sac to replace the unsafe bassinet and loose blankets.

A teenage mom was co-bedding with her baby or letting the baby sleep in a swing. She was given a pack-n-play. Additionally, the Fisher Price swing had been recalled, so mom was educated about the danger of using it.

Mom was visited whose infant had a G tube for feeding. Mom was uncertain as to how she was supposed to feed the infant correctly. The RN contacted the NICU at the hospital to find out the correct information regarding this and then was able to teach mom the correct technique for feeding.

We have had 16 moms presenting at visits with elevated BP's. In all these circumstances the OB provider was notified and some of these moms were immediately readmitted to the hospital.

We identified 19 moms with high mental health risk and were connected to support services.

457 families have been linked to community supports and services.
