

Reasons why I believe this wall should remain in place...

1.) This wall has a French Drain running along the inner Bottom Line that pulls water into it and prevents flooding and erosion, benefiting my next door neighbor as well as the street from all kinds of flooding and debris.

2.) My house sits on a high hill and the wall holds the dirt in place while draining the rainwater into a perforated pipe instead of washing mud into the street.

3.) The location of the wall is necessary in order to properly contain the foundation around a house that sits on a hill this high.

* TO the City of Columbus ga. *

I, Jerry Lee Scott, am requesting a City Variance Permit for improving the City Right of Way 4' 6" to 5'.

It was not intentional. I followed the guidance of the man that was over this Department at the time. He told me that as long as I was a good distance behind the water meter with this wall, that it was fine.

Months later after the wall was constructed and after this gentleman retired, I was told differently. 706-573-9890
Thank you very much, Jerry Scott
