

Power Quality Monitor

The Electric Department currently has two Power Quality Monitors from Power Monitors, Inc (PMI). One of the monitors needs to be replaced due to its limited features and monitoring time. These recorders are used to monitor various power quality metrics such as voltage, current, harmonics and etc.

The electric department is asking for authorization to purchase the Revolution Power Quality Recorder and needed accessories from Power Monitors, INC for \$12,080.68 so we can have more than one functional Power Quality Monitor. We would like to order from PMI due to our department's familiarity with the product and the software. The required software is already installed and used by the electric department.

This is a budgeted expense.
