A & R Project # 21-134

EXECUTIVE SUMMARY

Traffic impacts were evaluated for the proposed residential development that will be located to the east of Cole Lake Road and north of SR 120 Connector (Scoggins Road) in the City of Dallas, Georgia. The development will consist of 670 units of single-family detached housing.

The development proposes two full access driveways on Cole Lake Road.

Existing and future operations during the AM peak hour (7:00 AM – 9:00 AM) and PM peak hour (4:00 PM – 6:00 PM) before and after completion of the project were analyzed at the following intersections:

1. Cole Lake Road and SR 120 Connector (Scoggins Road)
2. SR 120 Connector (Scoggins Road) and SR 61 (Villa Rica Highway)
3. Cole Lake Road and Monroe Cole Road
4. West Avenue and Cole Lake Road
5. SR 120 (Buchanan Highway) and Cole Lake Road
6. Cole Lake Road and Happy Valley Church Road
7. Happy Valley Church Road and Old Villa Rica Road
8. US 278/ SR 6/ SR 120 (Jimmy Campbell Parkway) and Old Villa Rica Road
9. US 278/ SR 6/ SR 120 (Jimmy Campbell Parkway) and West Avenue/ South Main Street
10. US 278/ SR 6/ SR 120 (Jimmy Campbell Parkway) and SR 61 (Villa Rica Highway)/ SR 61 (Nathan Dean Boulevard)
11. US 278/ SR 6/ SR 120 (Jimmy Campbell Parkway) and SR 120 (Buchanan Highway)/ SR 6 Business (Buchanan Street)
12. SR 61 (Nathan Dean Boulevard) and SR 6 Business (Merchants Drive)/ Hampton Drive
13. SR 61 (Nathan Dean Boulevard) and Henry Y Holland Drive
14. SR 61 (Nathan Dean Boulevard) and Thomas B Murphy Drive

GDOT planned improvement project (PI 0013702) was identified as a programmed improvement project that is projected to be completed in 2025. Since the proposed development is planned to be completed in 2026, the overlapping intersections in the study network and improved project that are included in the DRI study network are listed below and the programmed project will be analyzed with and without the widening project in the “No-Build” and “Build” conditions.

The following intersections will be considered with the programmed improvement project lane geometry in the analysis:

- SR 120 Connector (Scoggins Road) and SR 61 (Villa Rica Highway)
- US 278/ SR 6/ SR 120 (Jimmy Campbell Parkway) and SR 61 (Villa Rica Highway)/ SR 61 (Nathan Dean Boulevard)

Traffic Operations Summary

Table E1 below provides a summary of traffic operations for the “No-Build” and “Build” conditions for the year 2026 with and without system improvements. As per GRTA requirements, all approaches that do not meet the level-of-service (LOS) standard (considered failing) are highlighted in Table E1. Table E1 for “Build” conditions also includes the project’s total added trip and the respective percentage of overall total “Build” condition approach traffic volume for all failing LOS approaches after all improvements are completed.

TABLE E1 – FUTURE INTERSECTION OPERATIONS AT FAILING APPROACHES

Intersection	No-Build Condition: LOS (Delay)				Build Condition: LOS (Delay)							
	NO IMPROVEMENTS		PLANNED AND SYSTEM IMPROVEMENTS		NO IMPROVEMENTS		PLANNED AND SYSTEM IMPROVEMENTS		SITE VOLUMES AT FAILING APPROACH BUILD WITH IMPROVEMENTS		PRECENT SITE TRIPS OF TOTAL APPROACH TRIPS AT FAILING APPROACHES	
	AM Peak	PM Peak	AM Peak	PM Peak	AM Peak	PM Peak	AM Peak	PM Peak	AM Peak	PM Peak	AM Peak	PM Peak
10 <u>US 278/ SR 6/ SR 120 (Jimmy Campbell Parkway) @ SR 61 (Nathan Dean Boulevard)</u> -Westbound Approach -Southbound Approach	<u>D (48.2)</u> E (71.6) E (62.4)	<u>E (63.7)</u> E (69.4) F (109.4)	<u>C (26.6)</u> B (13.6) D (47.7)	<u>C (29.5)</u> C (22.8) D (44.7)	<u>E (55.7)</u> F (97.8) E (61.4)	<u>F (81.6)</u> F (108.9) F (107.8)	<u>C (27.1)</u> B (15.0) D (47.3)	<u>C (30.4)</u> C (25.4) D (44.5)	No failing approaches	No failing approaches	No failing approaches	No failing approaches
12 <u>SR 6 Business (Merchants Drive) @ SR 61 (Nathan Dean Boulevard) / Hampton Drive</u> -Northbound Approach -Southbound Approach	<u>D (35.9)</u> D (54.7) E (61.4)	<u>E (58.8)</u> F (99.9) E (59.5)	<u>C (27.8)</u> D (47.4) E (61.4)	<u>C (29.3)</u> D (44.6) E (59.5)	<u>D (37.6)</u> E (56.1) E (61.4)	<u>E (62.0)</u> F (105.8) E (59.5)	<u>C (28.2)</u> D (46.8) E (61.4)	<u>C (29.6)</u> D (44.5) E (59.5)	- 0	- 0	- 0%	- 0%
13 <u>SR 61 (Nathan Dean Boulevard) @ Henry Y Holland Drive</u> -Eastbound Approach	C (23.1)	<u>E (36.9)</u>	<u>A (6.0)</u> D (53.6)	<u>A (6.1)</u> D (48.1)	C (24.9)	<u>E (42.1)</u>	<u>A (6.0)</u> D (53.6)	<u>A (6.4)</u> D (48.1)	No failing approaches	No failing approaches	No failing approaches	No failing approaches

After accounting for the planned GDOT improvement project and the recommended system improvements listed in the Executive Summary and Page 36, one approach will continue to operate at level-of-service “E”.

- The southbound approach (Hampton Drive) at **intersection 12** (SR 6 Business (Merchants Drive) and SR 61 (Nathan Dean Boulevard) / Hampton Drive) will continue to operate at a level-of-service “E” in the “Build” condition after system and programmed improvements are completed. The delay for the southbound approach is higher given the large volumes of vehicles that enter and exit the intersection from all other approaches versus the 33 southbound vehicles in the PM peak hour (“Build” Scenario).

The LOS standard was achieved at intersection 10 (US 278/ SR 6/ SR 120 (Jimmy Campbell Parkway) @ SR 61 (Nathan Dean Boulevard)) after the programmed GDOT improvement project was accounted for in the analysis.

The LOS standard was achieved at intersection 13 (SR 61 (Nathan Dean Boulevard) and Henry Y Holland Drive) by addition of a traffic signal as a system improvement. It is recommended that a traffic signal be installed at this intersection if warranted per MUTCD guidelines.

The table below includes 95th percentile Synchro HCM 6 queue length for failing level-of-service approaches for the build condition with improvements that had site generated traffic. Queue length reports are included in the Appendix.

TABLE E2 – FUTURE 95TH PERCENTILE SYNCHRO QUEUES (FT) FOR FAILING APPROACHES			
Intersection	Available Storage	Queue in feet	
		BUILD with Improvements	
		AM Peak	PM Peak
12 <u>SR 6 Business (Merchants Drive) @ SR 61 (Nathan Dean Boulevard) / Hampton Drive</u> -Southbound Approach	-	73	48

As reported in Table E2, the projected “Build” condition 95th percentile approach queues will be accommodated by the existing storage available.

Recommended System Improvements

The following are system improvements that were identified from the “No-Build” condition analysis.

Intersection 12: SR 6 Business (Merchants Drive) and SR 61 (Nathan Dean Boulevard) / Hampton Drive

- Convert the existing shared through left turn to a dual left with shared through movement in one lane

Recommended Site Mitigation Improvements

Site Driveway 1: Full Access driveway on Cole Lake Road

- One entering and one exiting lane
- Stop sign controlled on the driveway approach with Cole Lake Road remaining free flow
- Left turn lane and a deceleration lane for entering traffic

Site Driveway 2: Full Access driveway on Cole Lake Road

- One entering and two exiting lanes
- Stop sign controlled on the driveway approach with Cole Lake Road remaining free flow
- Left turn lane and a deceleration lane for entering traffic

INTRODUCTION

The purpose of this study is to determine the traffic impact that will result from the proposed residential development that will be located to the east of Cole Lake Road and north of SR 120 Connector (Scoggins Road) in the City of Dallas, Georgia. The traffic analysis evaluates the current operations and the future conditions with the traffic generated by the development. The development will consist of 670 units of single-family detached housing.

The development proposes access at the following locations:

- Site Driveway 1: Full access driveway on Cole Lake Road
- Site Driveway 2: Full access driveway on Cole Lake Road

The AM and PM peak hours have been analyzed in this study. In addition to the site access points, this study includes the evaluation of traffic operations at the intersections of:

1. Cole Lake Road and SR 120 Connector (Scoggins Road)
2. SR 120 Connector (Scoggins Road) and SR 61 (Villa Rica Highway)
3. Cole Lake Road and Monroe Cole Road
4. West Avenue and Cole Lake Road
5. SR 120 (Buchanan Highway) and Cole Lake Road
6. Cole Lake Road and Happy Valley Church Road
7. Happy Valley Church Road and Old Villa Rica Road
8. US 278/ SR 6/ SR 120 (Jimmy Campbell Parkway) and Old Villa Rica Road
9. US 278/ SR 6/ SR 120 (Jimmy Campbell Parkway) and West Avenue/ South Main Street
10. US 278/ SR 6/ SR 120 (Jimmy Campbell Parkway) and SR 61 (Villa Rica Highway)/ SR 61 (Nathan Dean Boulevard)
11. US 278/ SR 6/ SR 120 (Jimmy Campbell Parkway) and SR 120 (Buchanan Highway)/ SR 6 Business (Buchanan Street)
12. SR 61 (Nathan Dean Boulevard) and SR 6 Business (Merchants Drive)/ Hampton Drive
13. SR 61 (Nathan Dean Boulevard) and Henry Y Holland Drive
14. SR 61 (Nathan Dean Boulevard) and Thomas B Murphy Drive

Recommendations to improve traffic operations have been identified as appropriate and are discussed in detail in the following sections of the report.

STUDY NETWORK DETERMINATION

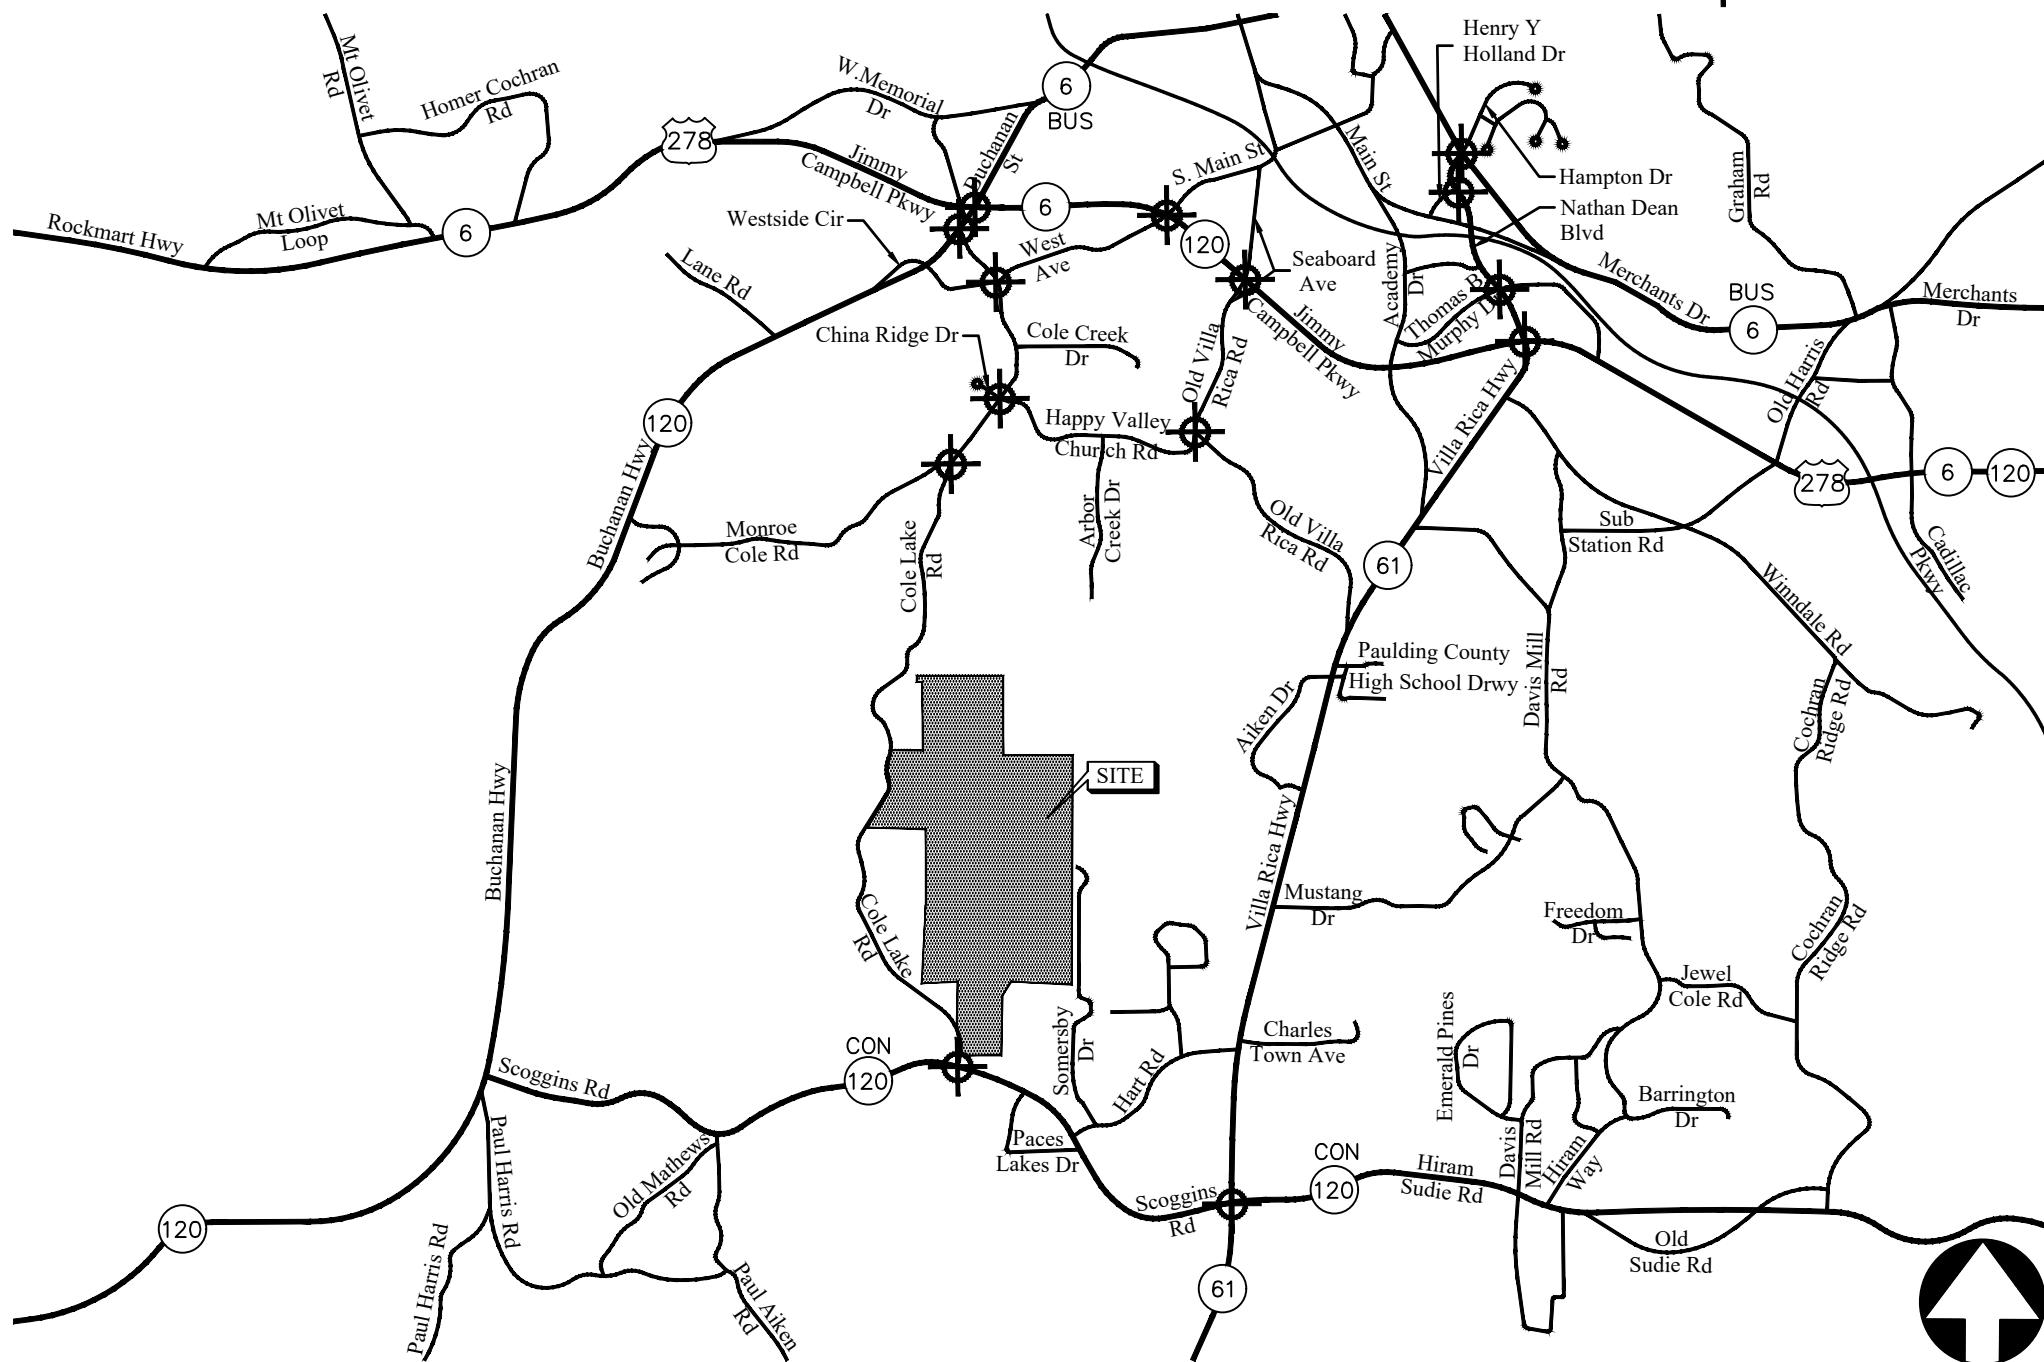

The study network was determined by evaluating the amount of traffic that the proposed development will add to each roadway segment in the area. According to GRTA requirements, a roadway segment carries a “significant” amount of traffic if the project contributes 7% or more trips to the two-way daily service volumes of the roadway at the appropriate level of service standard. Upon agreement with GRTA a level of service standard of “D” was used for determining the study area network.

The traffic generated by the proposed project was then assigned to the area roadways using the trip distribution to determine the site-generated traffic on each roadway segment. The boundaries of the study network extend to the most distant intersections where at least 7% of the service volumes on the segment are attributed to project traffic. The following study intersections fell within the 7% rule and/or have been selected as being suitable for evaluation in discussions with GRTA, GDOT, Northwest Georgia RDC, City of Dallas, and Paulding County:

1. Cole Lake Road and SR 120 Connector (Scoggins Road)
2. SR 120 Connector (Scoggins Road) and SR 61 (Villa Rica Highway)
3. Cole Lake Road and Monroe Cole Road
4. West Avenue and Cole Lake Road
5. SR 120 (Buchanan Highway) and Cole Lake Road
6. Cole Lake Road and Happy Valley Church Road
7. Happy Valley Church Road and Old Villa Rica Road
8. US 278/ SR 6/ SR 120 (Jimmy Campbell Parkway) and Old Villa Rica Road
9. US 278/ SR 6/ SR 120 (Jimmy Campbell Parkway) and West Avenue/ South Main Street
10. US 278/ SR 6/ SR 120 (Jimmy Campbell Parkway) and SR 61 (Villa Rica Highway)/ SR 61 (Nathan Dean Boulevard)
11. US 278/ SR 6/ SR 120 (Jimmy Campbell Parkway) and SR 120 (Buchanan Highway)/ SR 6 Business (Buchanan Street)
12. SR 61 (Nathan Dean Boulevard) and SR 6 Business (Merchants Drive)/ Hampton Drive
13. SR 61 (Nathan Dean Boulevard) and Henry Y Holland Drive
14. SR 61 (Nathan Dean Boulevard) and Thomas B Murphy Drive

The location of the development and the surrounding study network is shown in Figure 1. Other intersections within this corridor, such as unsignalized side streets, right-in/ right-out driveways or private driveways have not been included in the study network.

 Study Intersections

EXISTING ROADWAY FACILITIES

The following is a brief description of each of the roadway facilities located in proximity to the site:

US 278/SR 6/SR 120 (Jimmy Campbell Parkway)

US 278/ SR 6/ SR 120/SR 6/ SR 120 (Jimmy Campbell Parkway) is an east-west, four-lane, median-divided roadway with a speed limit of 55 mph in the vicinity of the site. Georgia Department of Transportation (GDOT) (Station ID's 223-0108 & 223-0110) indicate that the daily traffic volume on US 278/SR 6/ SR 120 (Jimmy Campbell Parkway) in 2019 was 24,800 vehicles per day east of SR 6 Business (Buchanan Street) and 28,100 vehicles per day west of SR 61 (Villa Rica Highway). GDOT classifies US 278/SR 6/ SR 120 (Jimmy Campbell Parkway) as a Principal Urban Arterial roadway.

SR 61 (Villa Rica Highway)

SR 61 (Villa Rica Highway) is a north-south, two-lane, undivided roadway with a posted speed limit of 55 mph in the vicinity of the site. GDOT traffic counts (Station ID's 223-0141) indicate that the daily traffic volume on SR 61 (Villa Rica Highway) in 2019 was 17,700 vehicles per day south of US 278/ SR 6/ SR 120 (Jimmy Campbell Parkway). GDOT classifies SR 61 (Villa Rica Highway) as an Urban Minor Arterial roadway.

SR 61 (Nathan Dean Boulevard)

SR 61 (Nathan Dean Boulevard) is a north-south, two-lane, undivided roadway with a posted speed limit of 45 mph in the vicinity of the site. GDOT traffic counts (Station ID's 223-0143) indicate that the daily traffic volume on SR 61 (Nathan Dean Boulevard) in 2019 was 8,610 vehicles per day north of US 278/ SR 6/ SR 120 (Jimmy Campbell Parkway). GDOT classifies SR 61 (Nathan Dean Boulevard) as an Urban Minor Arterial roadway.

SR 120 (Buchanan Highway)

SR 120 (Buchanan Highway) is a north-south, two-lane, undivided roadway with a posted speed limit of 45 mph in the vicinity of the site. GDOT traffic counts (Station ID's 223-0218) indicate that the daily traffic volume on SR 120 (Buchanan Highway) in 2019 was 7,690 vehicles per day north of McMichen Road. GDOT classifies SR 120 (Buchanan Highway) as an Urban Minor Arterial roadway.

SR 6 Business (Buchanan Street)

SR 6 Business (Buchanan Street) is a north-south, two-lane, undivided roadway with a posted speed limit of 45 mph in the vicinity of the site. GDOT traffic counts (Station ID's 223-0219) indicate that the daily traffic volume on SR 6 Business (Buchanan Street) in 2019 was 6,630 vehicles per day north of US 278/ SR 6/ SR 120 (Jimmy Campbell Parkway). GDOT classifies SR 6 Business (Buchanan Street) as an Urban Minor Arterial roadway.

SR 120 Connector (Scoggins Road)

SR 120 Connector (Scoggins Road) is an east-west, two-lane, undivided roadway with a posted speed limit of 45 mph in the vicinity of the site. GDOT traffic counts (Station ID's 223-0234) indicate that the daily traffic volume on SR 120 Connector (Scoggins Road) in 2019 was 2,720 vehicles per day west of Cole Lake Road. GDOT classifies SR 120 Connector (Scoggins Road) as an Urban Minor Arterial roadway.

SR 120 Connector (Hiram Sudie Road)

SR 120 Connector (Hiram Sudie Road) is an east-west, two-lane, undivided roadway with a posted speed limit of 45 mph in the vicinity of the site. GDOT traffic counts (Station ID's 223-0236) indicate that the daily traffic volume on SR 120 Connector (Hiram Sudie Road) in 2019 was 10,200 vehicles per day east of SR 61 (Villa Rica Highway). GDOT classifies SR 120 Connector (Hiram Sudie Road) as an Urban Minor Arterial roadway.

SR 6 Business (Merchants Drive)

SR 6 Business (Merchants Drive) is an east-west, two-lane, undivided roadway with a posted speed limit of 45 mph in the vicinity of the site. GDOT traffic counts (Station ID's 223-0118 & 223-0116) indicate that the daily traffic volume on SR 6 Business (Merchants Drive) in 2019 was 9,970 vehicles per day east of SR 61 (Nathan Dean Boulevard) and 20,600 vehicles per day west of SR 61 (Nathan Dean Boulevard). GDOT classifies SR 6 Business (Merchants Drive) as an Urban Minor Arterial roadway.

Cole Lake Road

Cole Lake Road is a north-south, two-lane, undivided roadway with a posted speed limit of 35 mph in the vicinity of the site.

Monroe Cole Road

Monroe Cole Road is an east-west, two-lane, undivided roadway with a posted speed limit of 25 mph in the vicinity of the site.

West Avenue

West Avenue is an east-west, two-lane, undivided roadway with a posted speed limit of 25 mph in the vicinity of the site. West Avenue is a one-way roadway between Trailside Drive and Cole Lake Road.

Happy Valley Church Road

Happy Valley Church Road is an east-west, two-lane, undivided roadway with a posted speed limit of 30 mph in the vicinity of the site.

Old Villa Rica Road

Old Villa Rica Road is a north-south, two-lane, undivided roadway with a posted speed limit of 30 mph in the vicinity of the site.

South Main Street

South Main Street is a north-south, two-lane, undivided roadway with a posted speed limit of 25 mph in the vicinity of the site.

Seaboard Drive

Seaboard Drive is a north-south, two-lane, undivided roadway with a posted speed limit of 30 mph in the vicinity of the site.

Thomas B Murphy Drive

Thomas B Murphy Drive is an east-west, two-lane, undivided roadway with a posted speed limit of 25 mph in the vicinity of the site.

Henry Y Holland Drive

Henry Y Holland Drive is an east-west, two-lane, undivided roadway with a posted speed limit of 25 mph in the vicinity of the site.

Hampton Drive

Hampton Drive is a north-south, two-lane, undivided roadway with a posted speed limit of 25 mph in the vicinity of the site.

China Ridge Drive

China Ridge Drive is an east-west, two-lane, undivided roadway with a posted speed limit of 25 mph in the vicinity of the site.

Existing Bicycle and Pedestrian Facilities

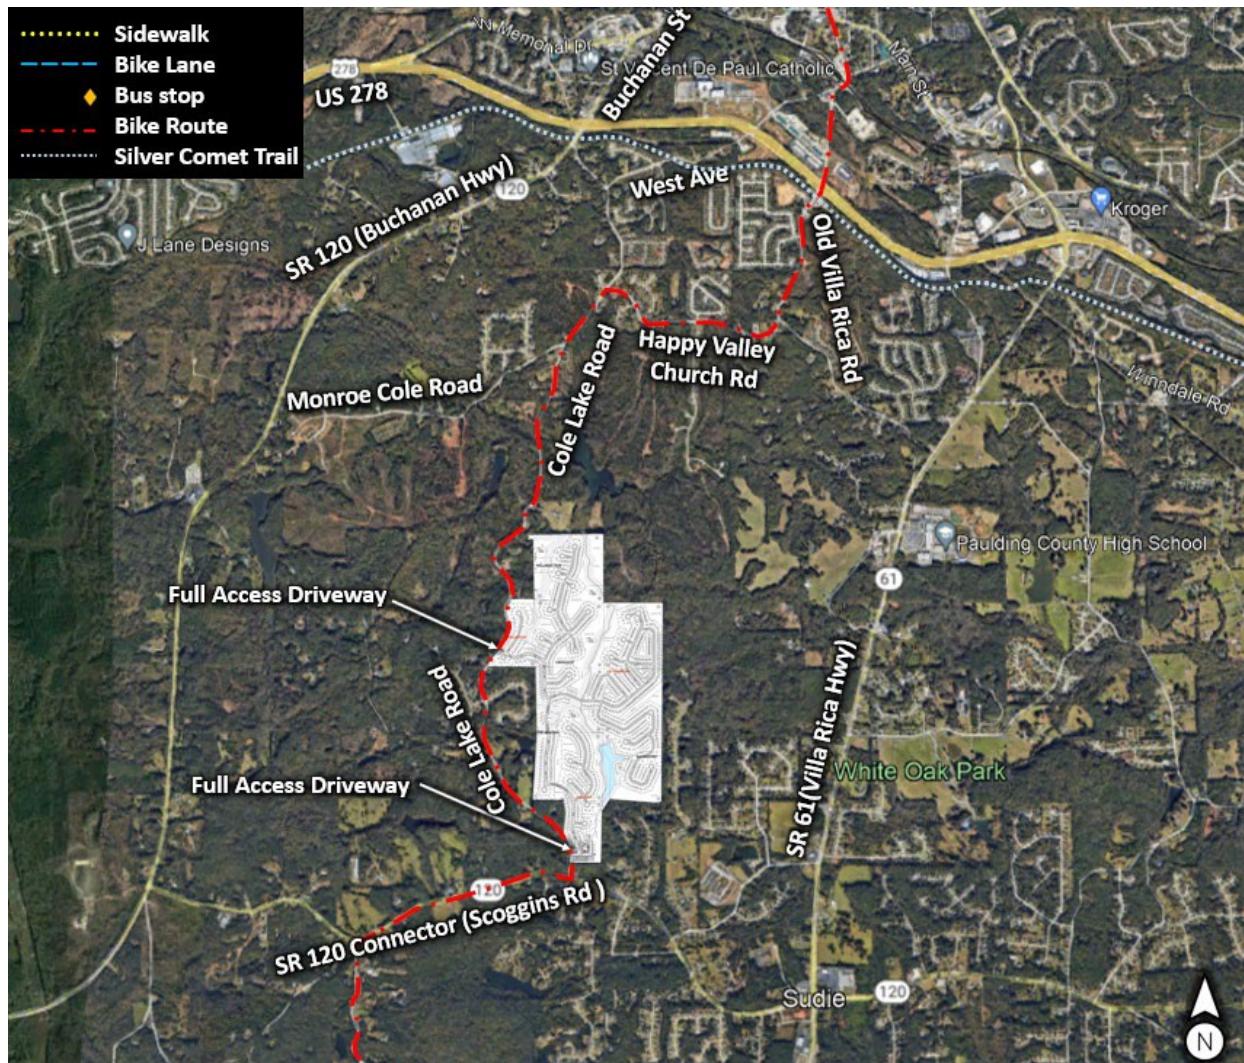

- No sidewalks, bike lanes, or bus stops were identified in the vicinity of the proposed development.
- Crosswalks are not available at the neighboring intersections to the proposed site.
- Silver Comet Trail runs north of the proposed site alongside US 278/ SR 6/ SR 120 (Jimmy Campbell Parkway).
- Cole Lake Road is a regionally designated bike route

Alternative Modes of Access

- No existing transit routes were identified in the study network.
- No high-capacity transit stations were identified in the vicinity of the proposed development.

The graphic below includes the location of existing sidewalks in the study network.

Existing Alternative Transportation Map

STUDY METHODOLOGY

In this study, the methodology used for evaluating traffic operations at each of the subject intersections is based on the criteria set forth in the Transportation Research Board's Highway Capacity Manual, 6th edition (HCM 6). Synchro software, which utilizes the HCM methodology, was used for the analysis. The following is a description of the methodology employed for the analysis of unsignalized and signalized intersections.

Unsignalized Intersections

For unsignalized intersections controlled by a stop sign on minor streets, the level-of-service (LOS) for motor vehicles with controlled movements is determined by the computed control delay according to the thresholds stated in Table 1 below. LOS is determined for each minor street movement (or shared movement), as well as major street left turns. LOS is not defined for the intersection as a whole or for major street approaches. The LOS of any controlled movement which experiences a volume to capacity ratio greater than 1 is designed as "F" regardless of the control delay.

Control delay for unsignalized intersections includes initial deceleration delay, queue move-up time, stopped delay and final acceleration delay. Several factors affect the control delay for unsignalized intersections, such as the availability and distribution of gaps in the conflicting traffic stream, critical gaps and follow-up time for a vehicle in the queue.

Level-of-service is assigned a letter designation from "A" through "F". Level-of-service "A" indicates excellent operations with little delay to motorists, while level-of-service "F" exists when there are insufficient gaps of acceptable size to allow vehicles on the side street to cross the main road without experiencing long delays.

TABLE 1 — LEVEL-OF-SERVICE CRITERIA FOR UNSIGNALIZED INTERSECTIONS		
Control Delay (sec/vehicle)	LOS by Volume-to-Capacity Ratio*	
	v/c ≤ 1.0	v/c > 1.0
≤ 10	A	F
> 10 and ≤ 15	B	F
> 15 and ≤ 25	C	F
> 25 and ≤ 35	D	F
> 35 and ≤ 50	E	F
> 50	F	F

*The LOS criteria apply to each lane on a given approach and to each approach on the minor street. LOS is not calculated for major-street approaches or for the intersection.

Source: Highway Capacity Manual, 6th edition, Exhibit 20-2 *LOS Criteria: Motorized Vehicle Mode*

Signalized Intersections

According to HCM procedures, LOS can be calculated for the entire intersection, each intersection approach, and each lane group. HCM uses control delay alone to characterize LOS for the entire intersection or an approach. Control delay per vehicle is composed of initial deceleration delay, queue move-up time, stopped delay and final acceleration delay. Both control delay and volume-to-capacity ratio are used to characterize LOS for a lane group. A volume-to-capacity ratio of 1.0 or more for a lane group indicates failure from capacity perspective. Therefore, such a lane group is assigned LOS F regardless of the amount of control delay.

Table 2 below summarizes the LOS criteria from HCM for motorized vehicles at signalized intersections.

Control Delay (sec/vehicle)*	LOS for Lane Group by Volume-to-Capacity Ratio*	
	v/c ≤ 1.0	v/c > 1.0
≤ 10	A	F
> 10 and ≤ 20	B	F
> 20 and ≤ 35	C	F
> 35 and ≤ 55	D	F
> 55 and ≤ 80	E	F
> 80	F	F

*For approach-based and intersection wide assessments, LOS is defined solely by control delay

Source: Highway Capacity Manual, 6th edition, Exhibit 19-8 *LOS Criteria: Motorized Vehicle Mode*

LOS A is typically assigned when the volume-to-capacity (v/c) ratio is low and either progression is exceptionally favorable, or the cycle length is very short. LOS B is typically assigned when the v/c ratio is low and either progression is highly favorable, or the cycle length is short. However, more vehicles are stopped than with LOS A. LOS C is typically assigned when progression is favorable, or the cycle length is moderate. Individual cycle failures (one or more queued vehicles are not able to depart because of insufficient capacity during the cycle) may begin to appear at this level. Many vehicles still pass through the intersection without stopping, but the number of vehicles stopping is significant. LOS D is typically assigned when the v/c ratio is high and either progression is ineffective, or the cycle length is long. There are many vehicle-stops and individual cycle failures are noticeable. LOS E is typically assigned when the v/c ratio is high, progression is very poor, the cycle length is long, and individual cycle failures are frequent. LOS F is typically assigned when the v/c ratio is very high, progression is very poor, the cycle length is long, and most cycles fail to clear the queue.

EXISTING 2022 TRAFFIC ANALYSIS

Existing Traffic Volumes

Existing traffic counts were obtained at the following study intersections:

1. Cole Lake Road and SR 120 Connector (Scoggins Road)
2. SR 120 Connector (Scoggins Road) and SR 61 (Villa Rica Highway)
3. Cole Lake Road and Monroe Cole Road
4. West Avenue and Cole Lake Road
5. SR 120 (Buchanan Highway) and Cole Lake Road
6. Cole Lake Road and Happy Valley Church Road
7. Happy Valley Church Road and Old Villa Rica Road
8. US 278/ SR 6/ SR 120 (Jimmy Campbell Parkway) and Old Villa Rica Road
9. US 278/ SR 6/ SR 120 (Jimmy Campbell Parkway) and West Avenue/ South Main Street
10. US 278/ SR 6/ SR 120 (Jimmy Campbell Parkway) and SR 61 (Villa Rica Highway)/ SR 61 (Nathan Dean Boulevard)
11. US 278/ SR 6/ SR 120 (Jimmy Campbell Parkway) and SR 120 (Buchanan Highway)/ SR 6 Business (Buchanan Street)
12. SR 61 (Nathan Dean Boulevard) and SR 6 Business (Merchants Drive)/ Hampton Drive
13. SR 61 (Nathan Dean Boulevard) and Henry Y Holland Drive
14. SR 61 (Nathan Dean Boulevard) and Thomas B Murphy Drive

Turning movement counts were collected on Tuesday, April 12, 2022. All turning movement counts were recorded during the AM and PM peak hours between 7:00 AM to 9:00 AM and 4:00 PM to 6:00 PM, respectively. The four consecutive 15-minute interval volumes that summed to produce the highest volume at the intersections were then determined. These volumes make up the peak hour traffic volumes for the intersections counted and are shown in Figure 2A, 2B and 2C.

Existing Traffic Operations

Existing 2022 traffic operations were analyzed at the study intersections in accordance with the HCM methodology. The results of the analyses are shown in Table 3. The existing traffic control and lane geometry for the intersections are shown in Figure 3A, 3B and 3C.

TABLE 3 – EXISTING INTERSECTION OPERATIONS

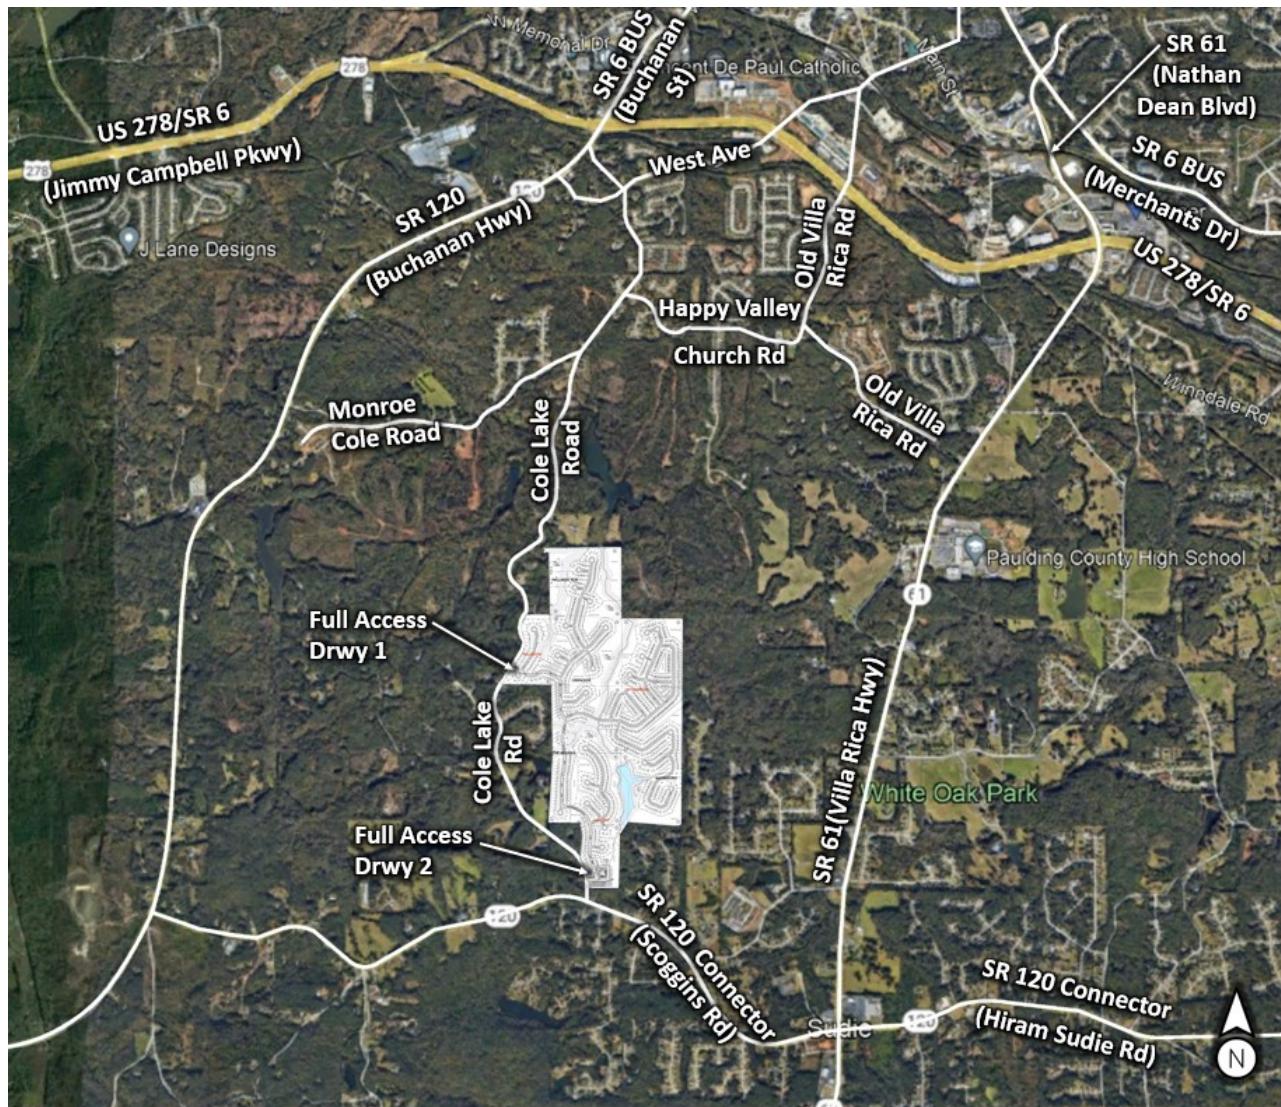

Intersection		Traffic Control	AM Peak	PM Peak	LOS Standard
1	<u>SR 120 Connector (Scoggins Road) @ Cole Lake Road</u> -Eastbound Left -Southbound Approach	Stop Controlled on SB Approach	A (7.5) B (11.5)	A (7.8) B (11.4)	D/D D/D

12	SR 6 Business (Merchants Drive) @ SR 61 (Nathan Dean Boulevard) / Hampton Drive	Signalized	C (34.1) C (22.3) B (17.6) D (53.4) E (60.4)	D (45.2) C (26.7) C (25.0) E (69.8) E (59.4)	D/D D/D D/D D/D D/D
13	SR 61 (Nathan Dean Boulevard) @ Henry Y Holland Drive	Stop Controlled on EB Approach	C (20.0) A (9.3)	E (35.3) A (9.7)	D/D D/D
14	SR 61 (Nathan Dean Boulevard) @ Thomas B Murphy Drive	Signalized	A (7.6) D (44.8) D (51.2) A (3.4) A (3.7)	B (11.5) D (41.0) D (46.6) A (6.0) A (6.0)	D/D D/D D/D D/D D/D

The results of existing traffic operations analysis indicate that all the study intersections (signalized) are operating at an overall level-of-service "D" or better in both the AM and PM peak hours. Most of the un-signalized intersections are operating at a level-of-service "C" or better in both the AM and PM peak hours. Approaches that are operating at a level of service "E" and "F" will be addressed in the future traffic operations sections.

PROJECT DESCRIPTION

The proposed residential development will be located to the east of Cole Lake Road and north of SR 120 Connector (Scoggins Road) in the City of Dallas, Georgia. The development will consist of 670 units of single-family detached housing.

The development proposes access at the following locations:

- Site Driveway 1: Full access driveway on Cole Lake Road
- Site Driveway 2: Full access driveway on Cole Lake Road

Site Plan

A site plan is shown in Figure 4.

Planned Bicycle and Pedestrian Facilities

Sidewalks will be provided along the internal street network and along street frontage of the proposed development to promote external connectivity via pedestrian facilities. Trails will be considered where possible internal to the development.

Potential Pedestrian and Bicycle Destinations

Potential pedestrian and bicycle destinations in the vicinity of the proposed development include the following:

- White Oaks Park
- Veterans Memorial Park
- Silver Comet Trail
- Tara Drummond Trailhead
- Paulding Chamber Trailhead

External Pedestrian Connections will be provided to encourage future connections to Kroger, Paulding High School, and other major sites.

Planned Transit Facilities

There is no existing or planned public transit service near the proposed development.

Consistency with Adopted Comprehensive Plan

The site is currently zoned as R-2 Suburban Residential District and is requesting a rezoning to Conditional Zoning. According to Unified Growth Policy Map the proposed development falls under Developing Suburbs land use area. The future land use map zoning for the site will be community residential. The land use vision and goals of City of Dallas are to coordinate infrastructure expansion with land use to encourage the expansion of infrastructure networks that are guided by the future development map.

The proposed residential development is consistent with the land use vision and goals since the proposed development consists of residential area. The proposed development will honor the current aquatic survey regulations with their subcontracted environmental provider.

Future Land Use Map

Future Land Use Map Zoning	Community Residential Character Area
Land Use Vision and Goals for City of Dallas	The land use vision and goal are to coordinate infrastructure expansion with land use to encourage the expansion of infrastructure networks
Relation to Existing Land Use Plans	The proposed residential development is consistent with the land use vision and goals since the proposed development consists of residential

The proposed residential development is consistent with the land use vision and goals listed above.

Project Phasing

This project has been evaluated for the complete build-out of the development in 2026.

Trip Generation

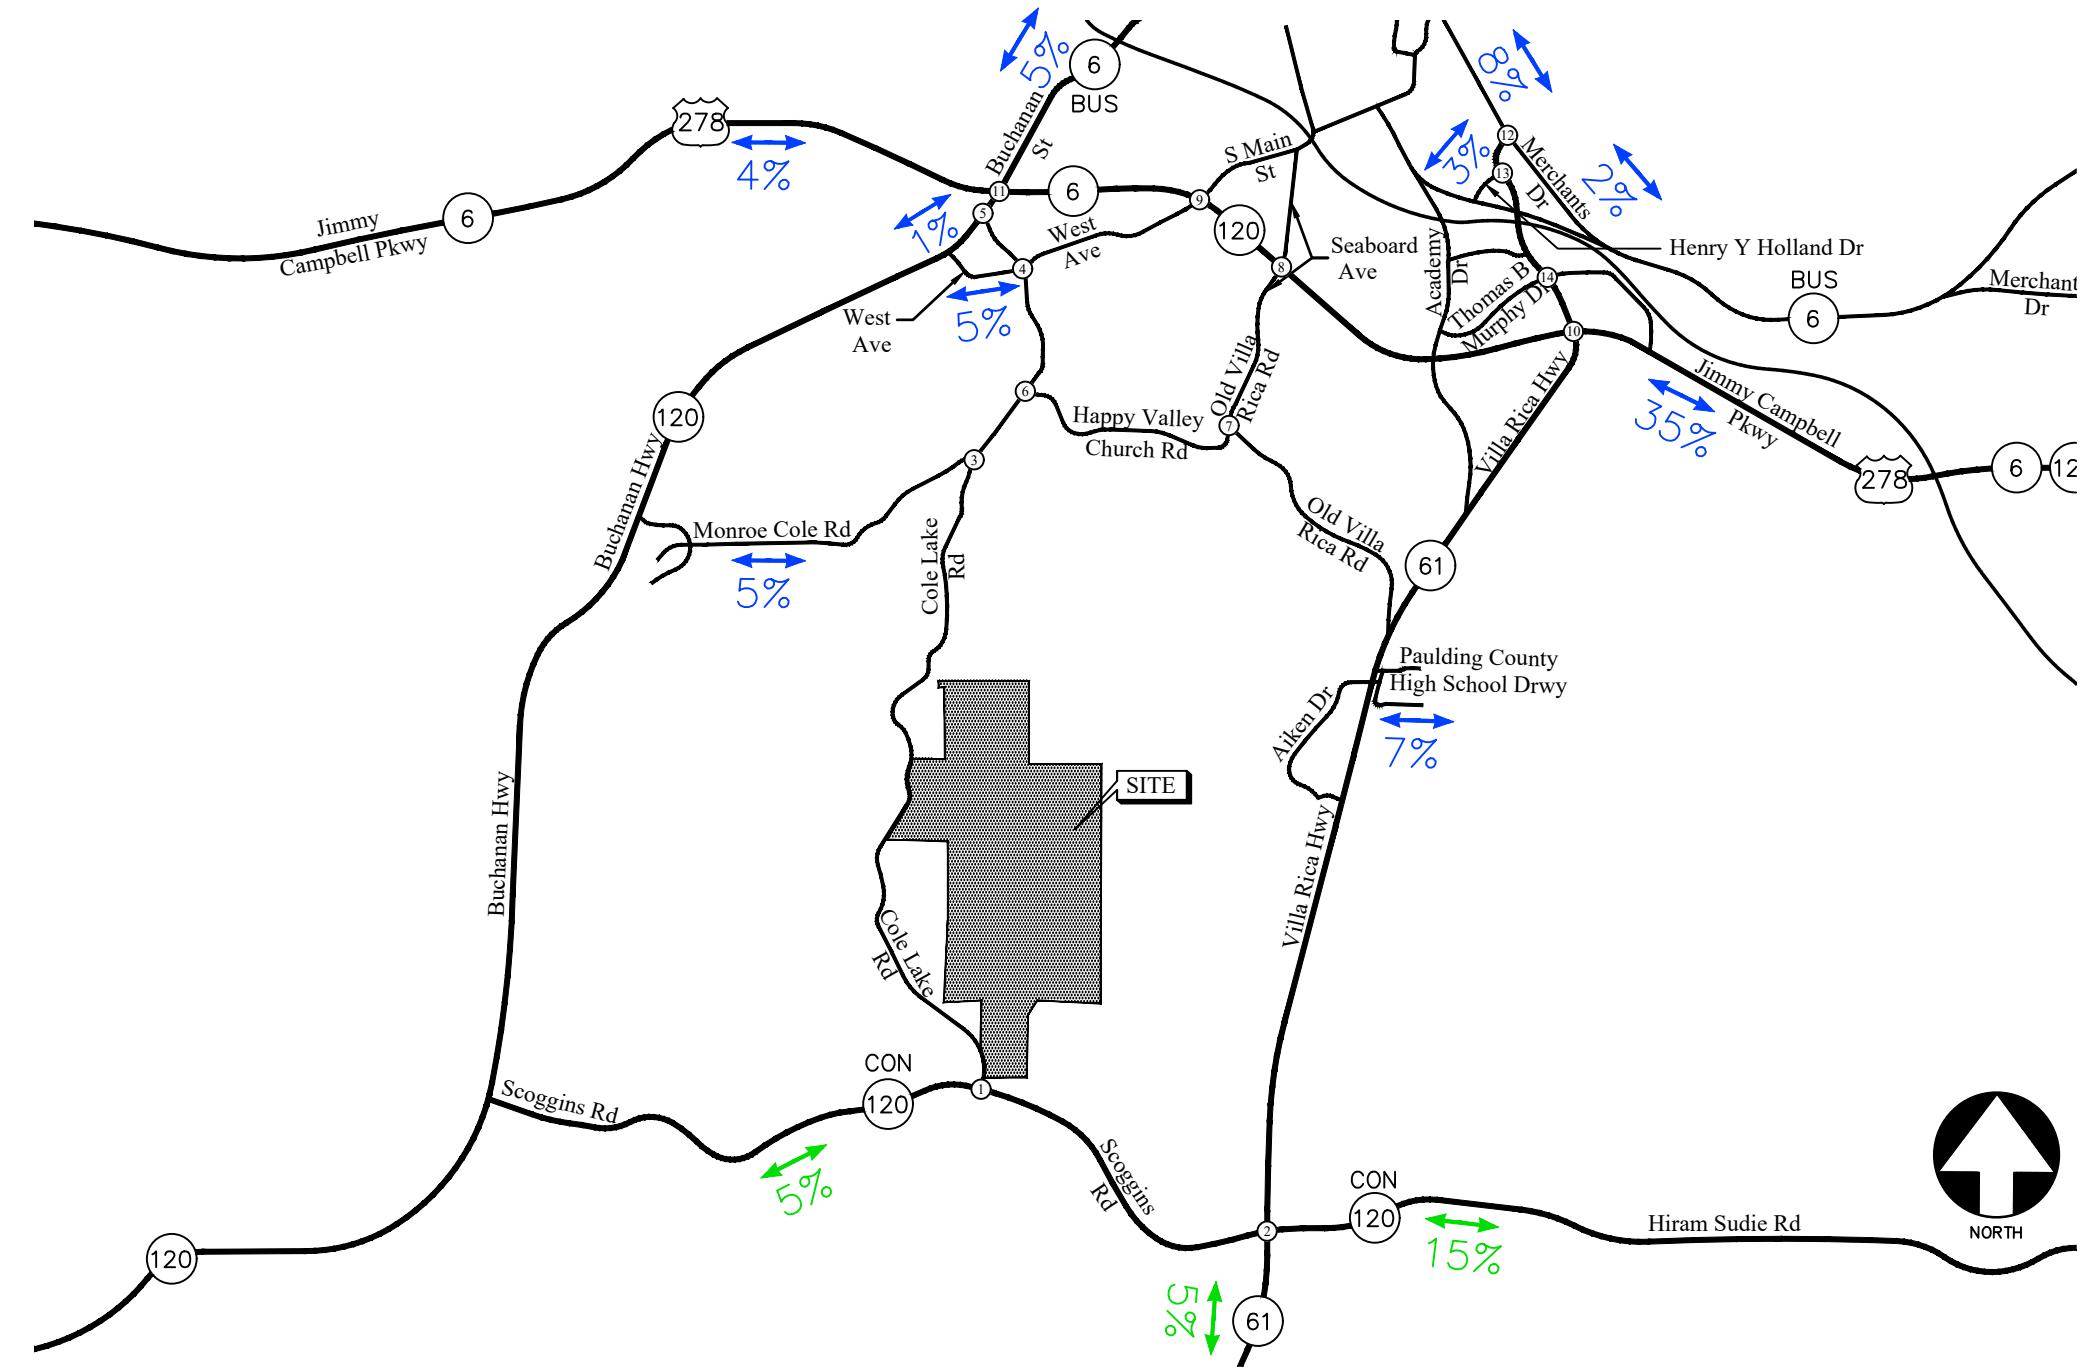

Trip generation estimates for the project were based on the rates and equations published in the 11th edition of the Institute of Transportation Engineers (ITE) Trip Generation report. This reference contains traffic volume count data collected at similar facilities nationwide. The trip generation was based on the following ITE Land Use: 210 – *Single-Family Detached Housing*. Per GRTA's request, the average rate equation was used for trip generation. The calculated total trip generation for the proposed development is shown in Table 4.

TABLE 4 – TRIP GENERATION

Land Use	Size	AM Peak Hour			PM Peak Hour			24-Hour
		Enter	Exit	Total	Enter	Exit	Total	2-way
ITE 210 – Single-Family Detached Housing	670 Units	122	347	469	397	233	630	6,318

Trip Distribution

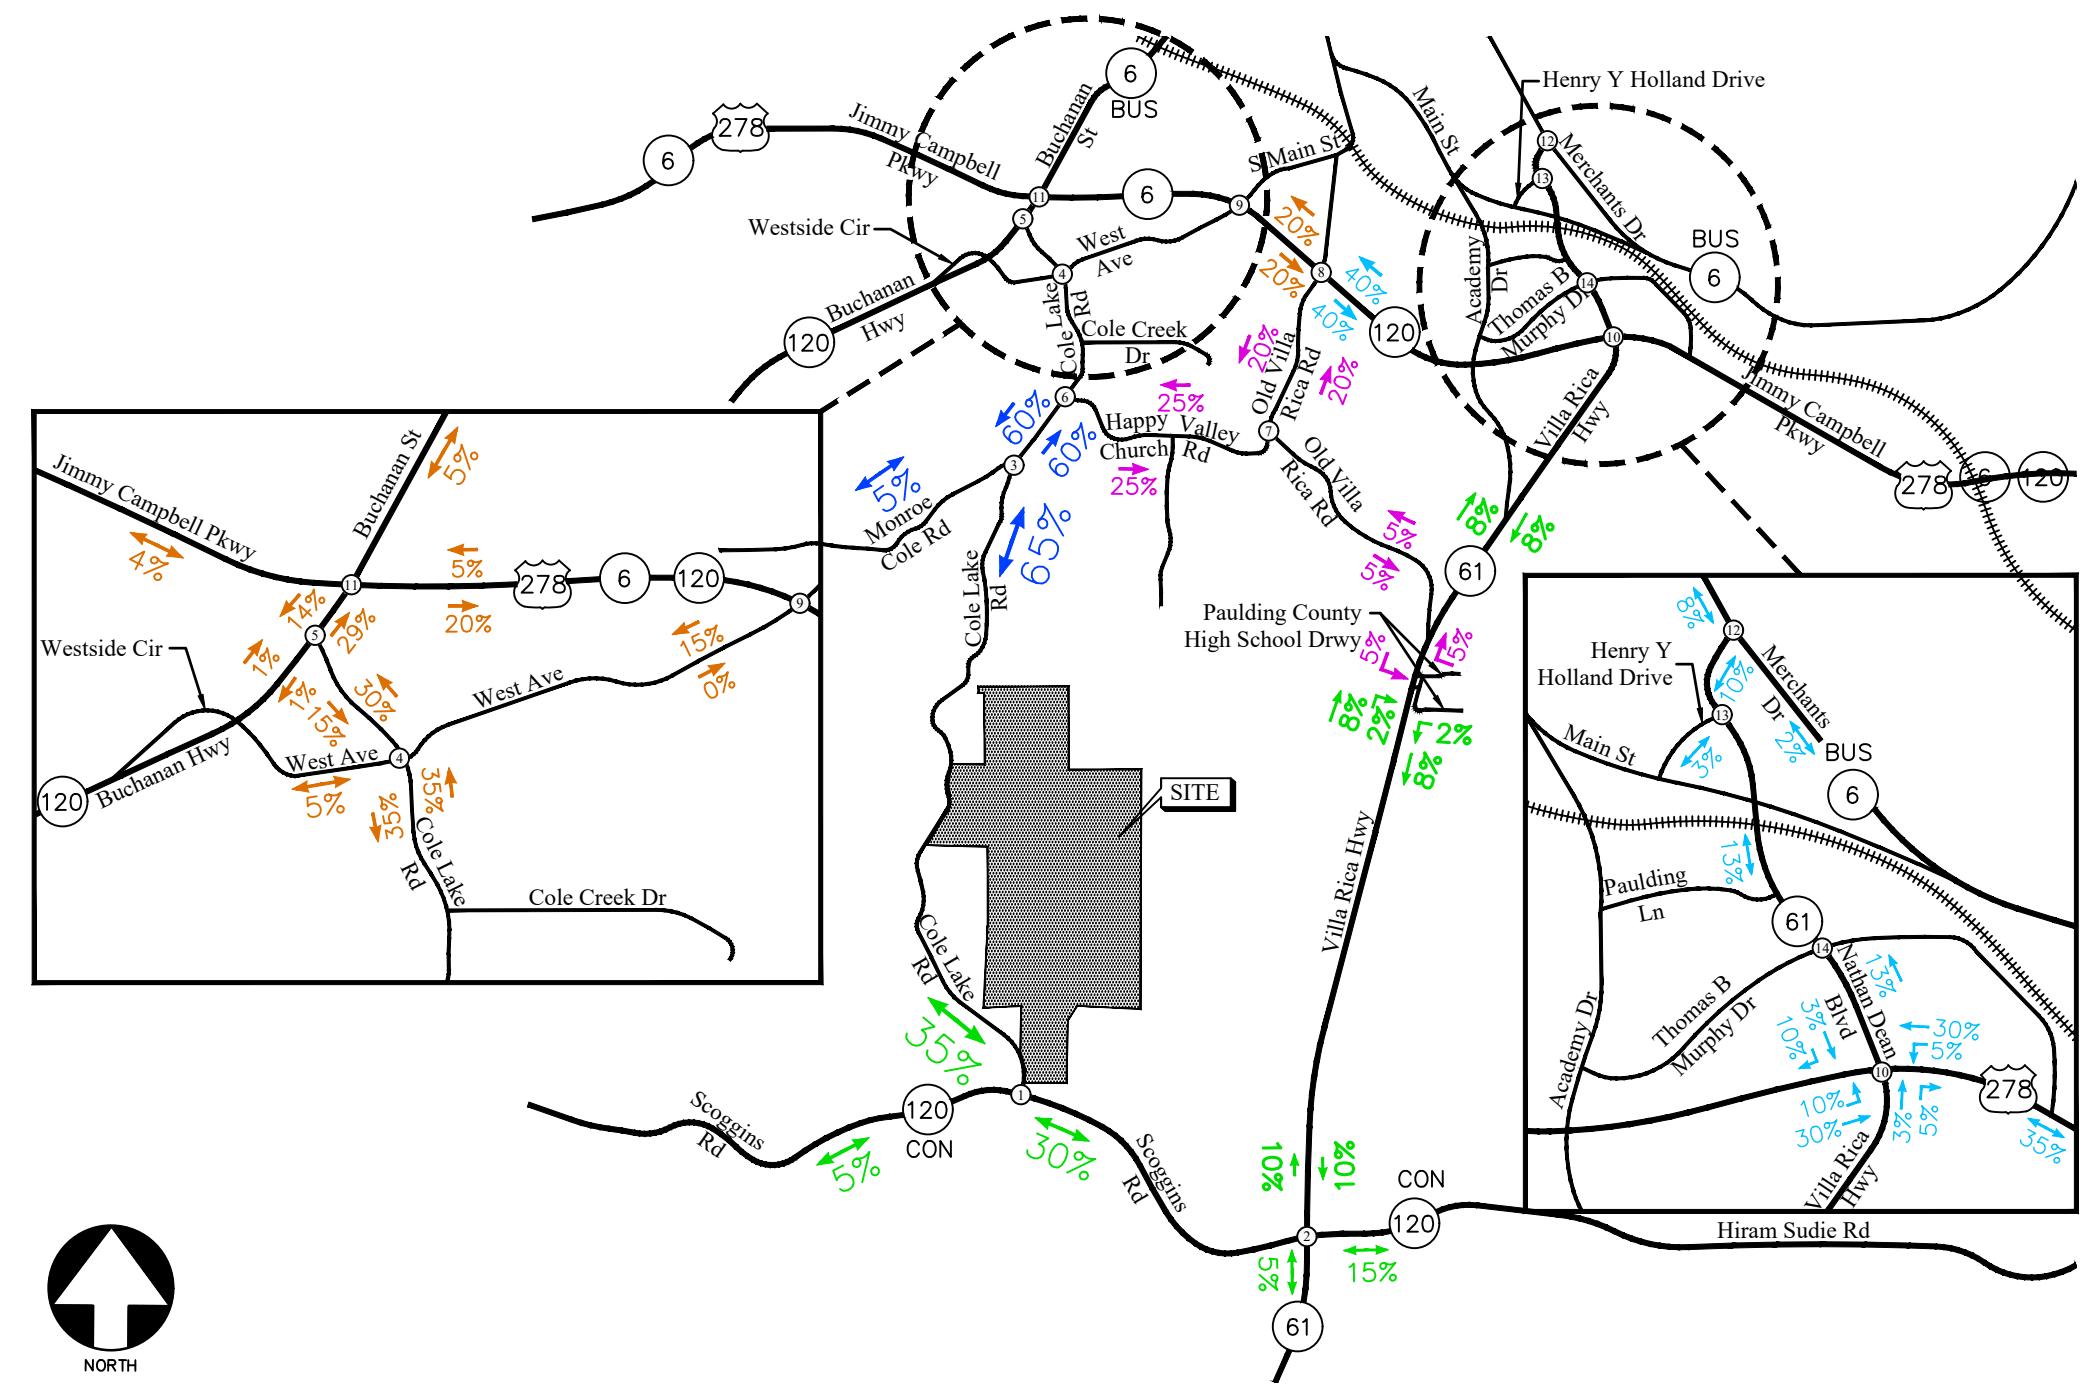

The trip distribution describes how traffic arrives and departs from the site. An overall trip distribution was developed for the site based on a review of GDOT ADT volumes and the locations of major roadways and highways that will serve the development. The site-generated peak hour traffic volumes, shown in Table 4, were assigned to the study area intersections based on this distribution. The outer-leg, internal trip distribution and AM and PM peak hour new traffic generated by the site are shown in Figure 5A, 5B, 5C, 5D and 5E.

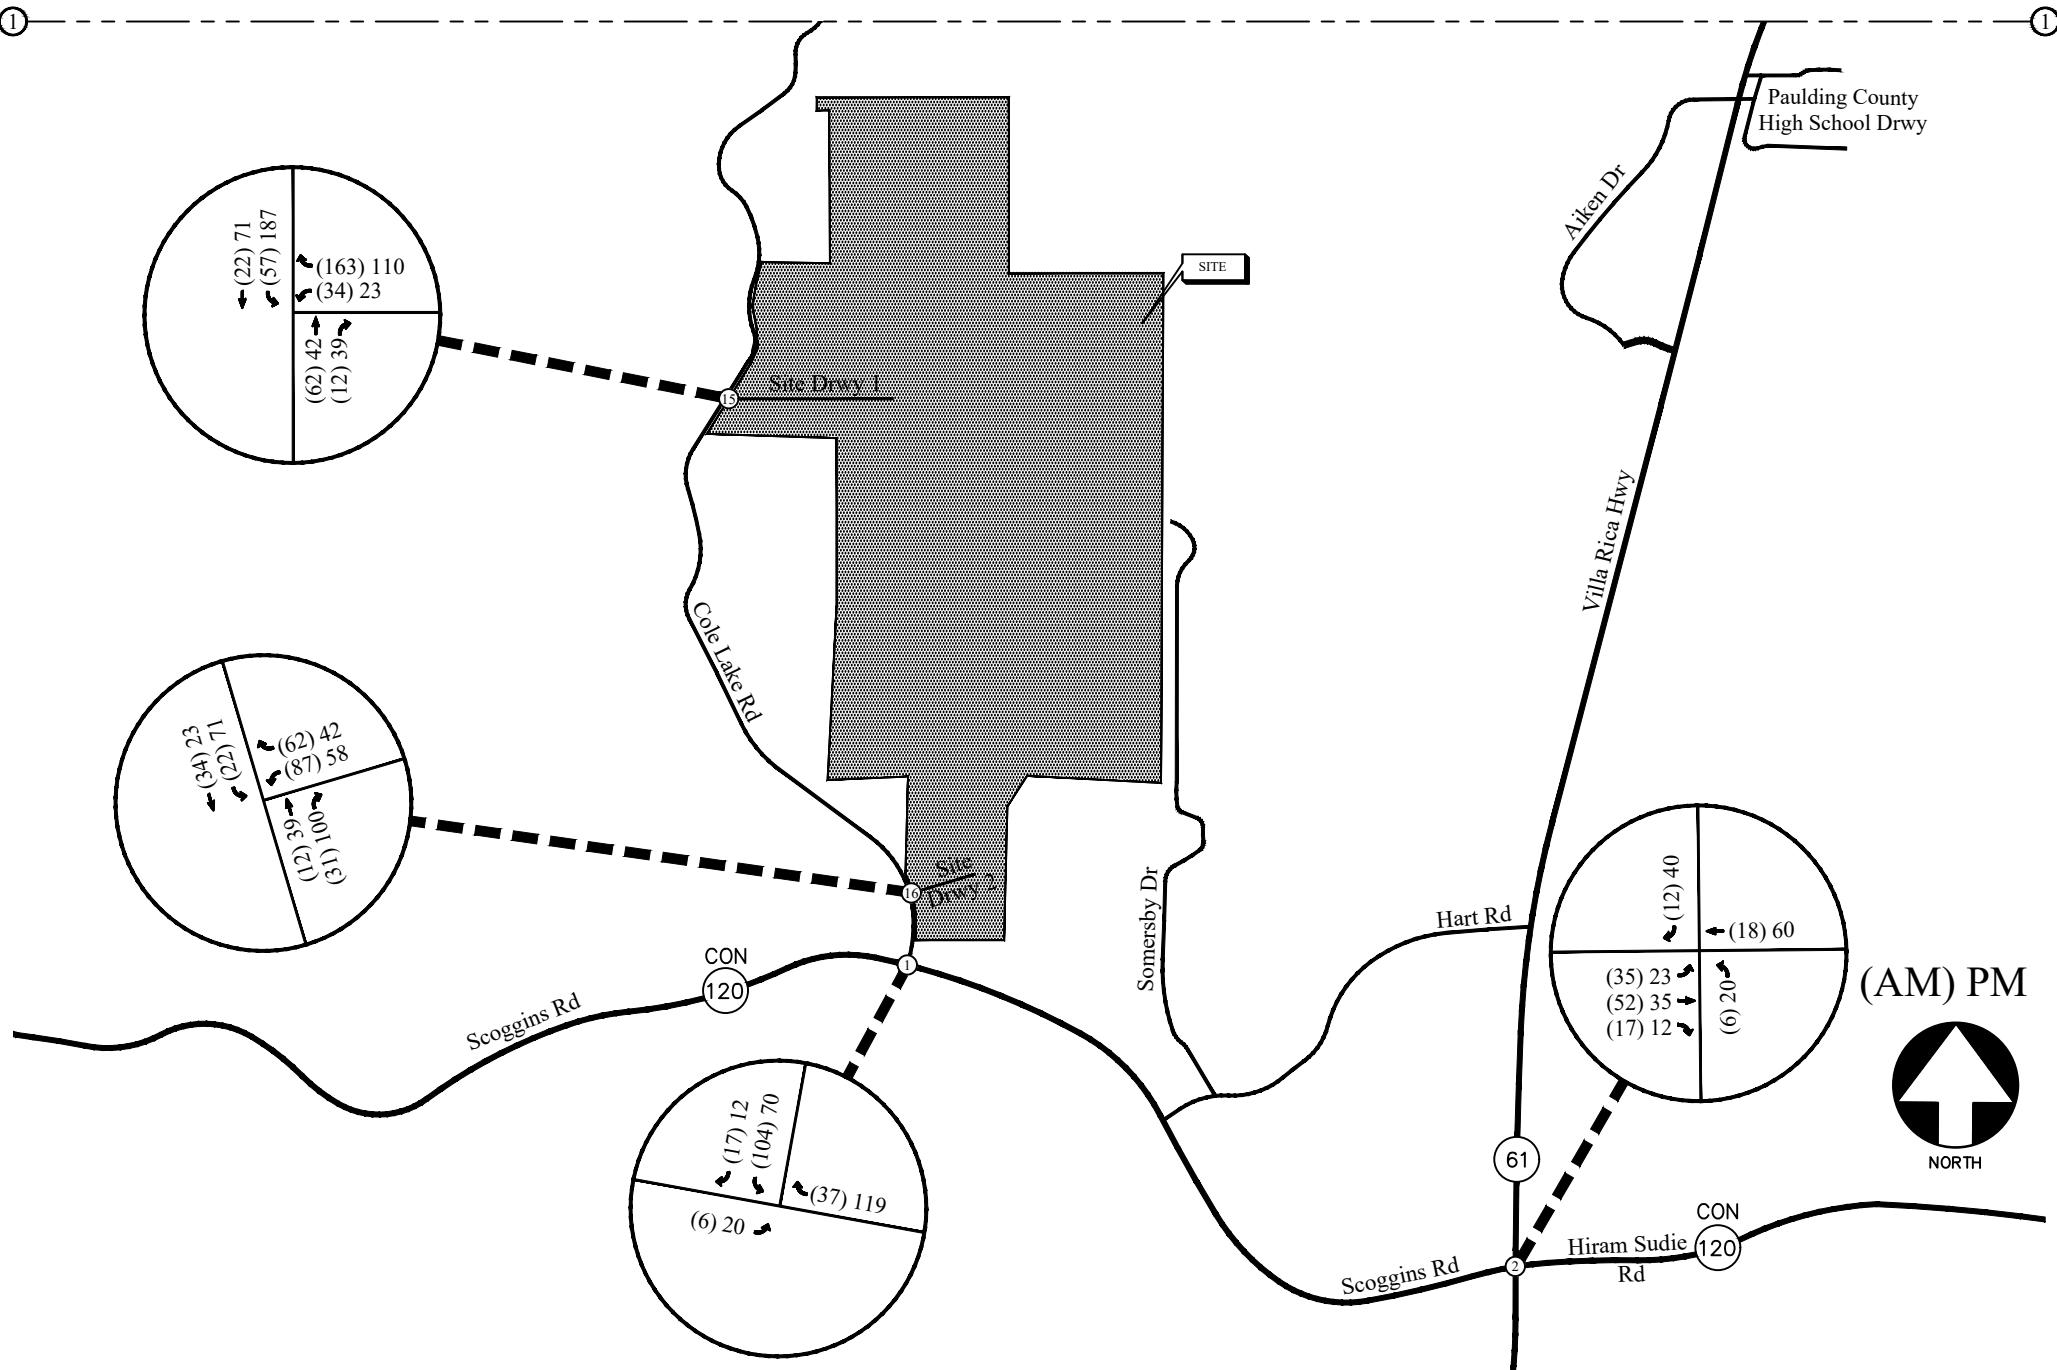

OUTER LEG TRIP DISTRIBUTION

FUTURE 2026 TRAFFIC ANALYSIS

The future 2026 traffic operations are analyzed for the “Build” and “No-Build” conditions. This provides a basis of reference for determining both the contribution of the site to overall traffic conditions and the additional improvements needed to provide sufficient site access and capacity for passing traffic. Note that survey and construction drawings would be needed to verify the feasibility and extent of additional right-of-way required for any recommended improvements.

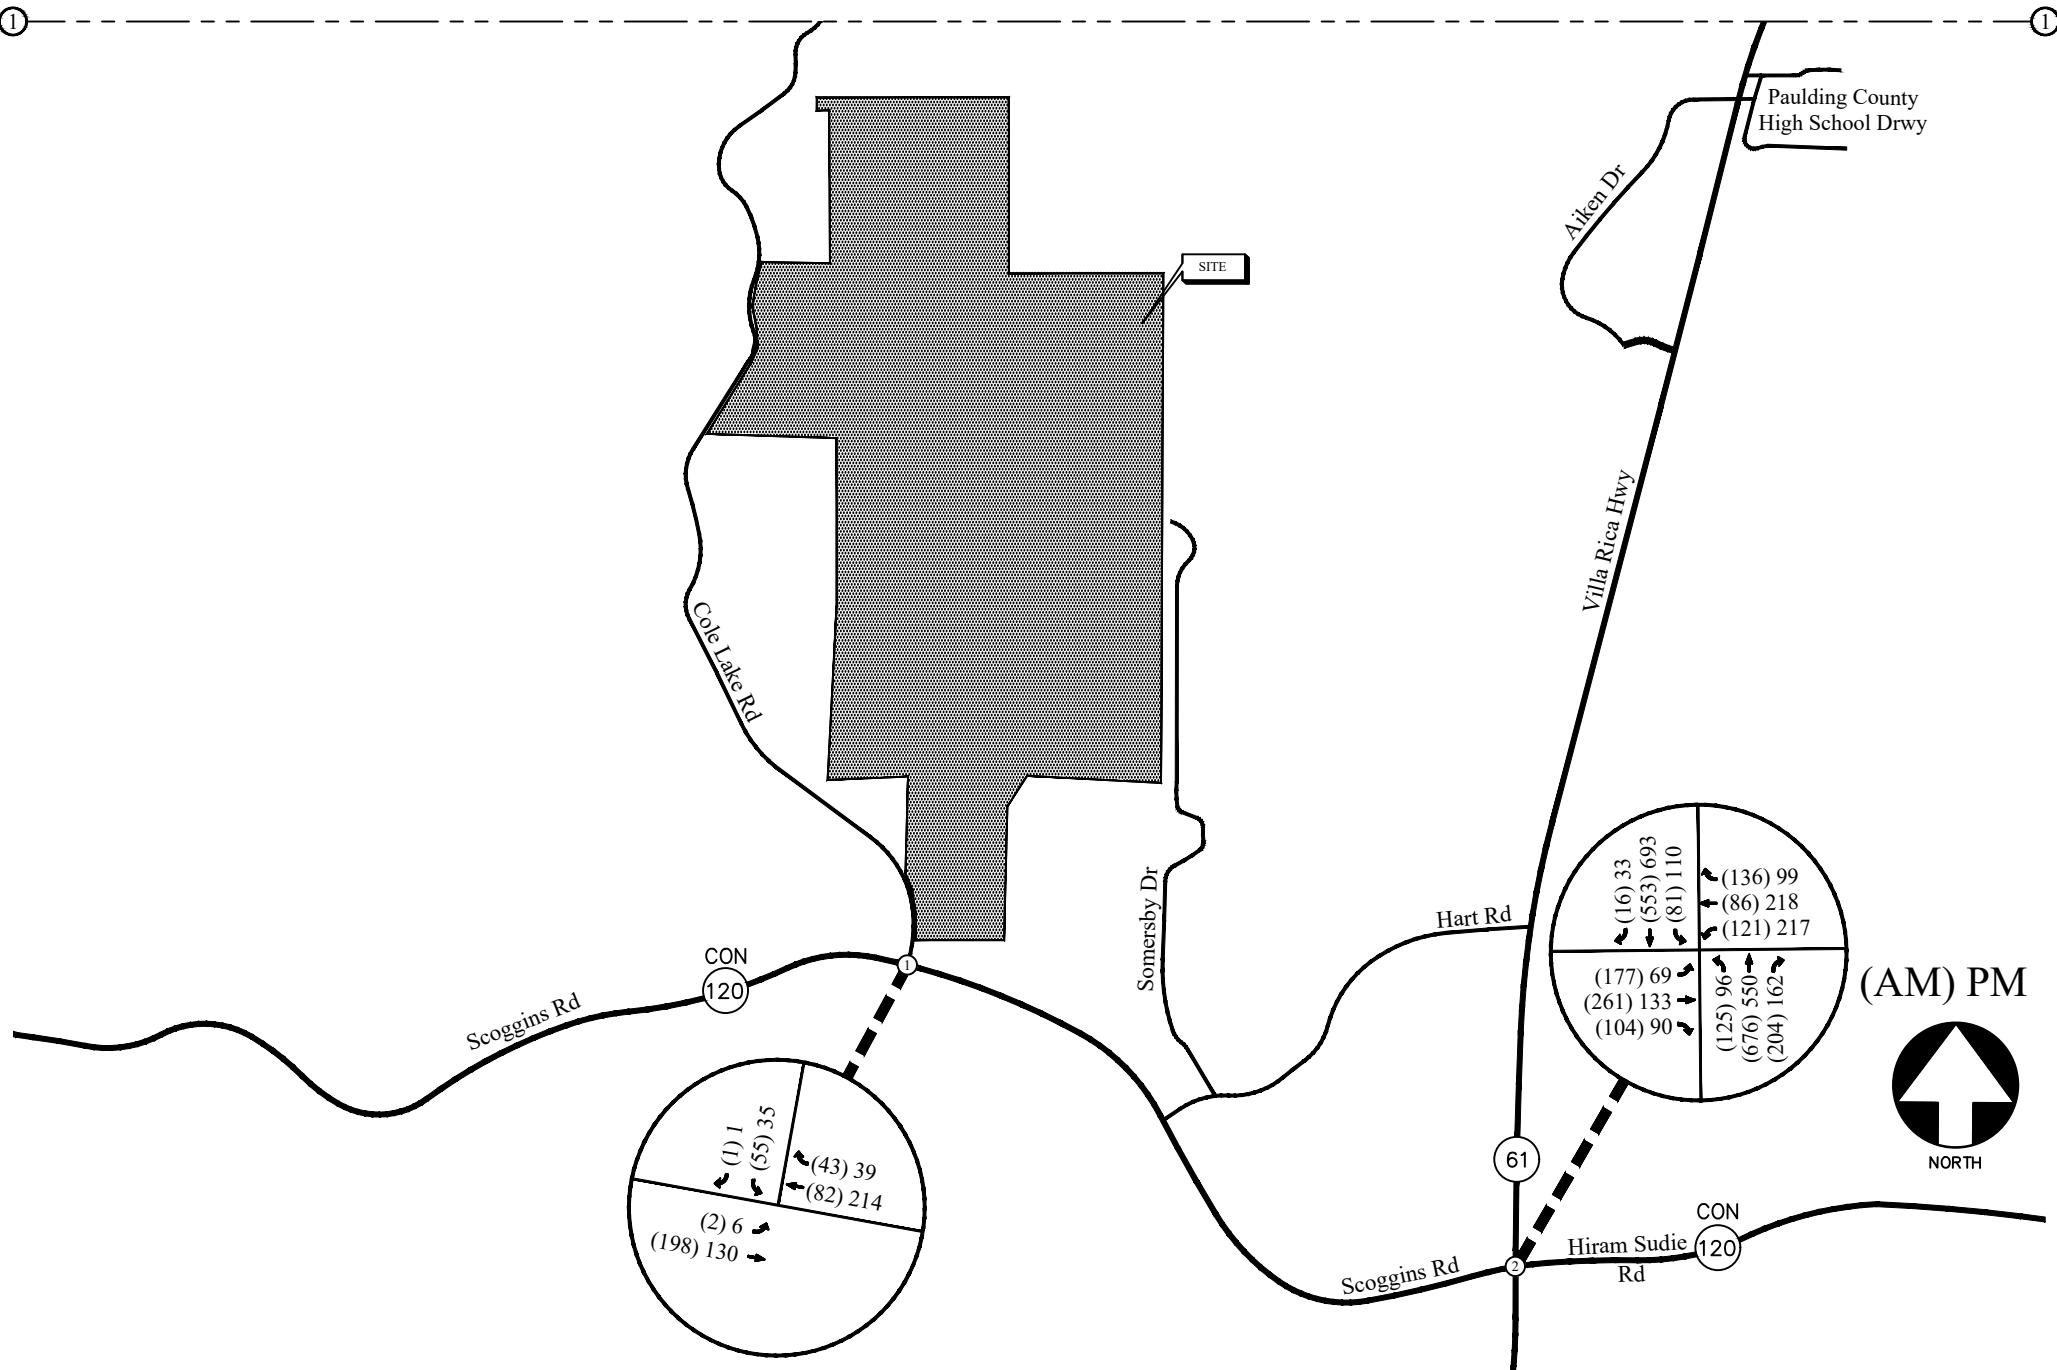

Improvements that are identified as “System Improvements” address deficiencies that are found within the existing road network prior to any impacts from the proposed development’s added traffic. Improvements that are identified as “Site Mitigation Improvements” address further impacts that are a result of the proposed development’s added traffic.

Future “No-Build” Conditions

The “No-Build” (or background) conditions provide an assessment of how traffic will operate in the study horizon year without the study site being developed as proposed, with projected increases in through traffic volumes due to normal annual growth and due to other planned developments in the area. The Future “No-Build” volumes consist of the existing traffic volumes (Figure 2A, 2B and 2C) plus increases for annual growth of traffic and traffic from other planned developments.

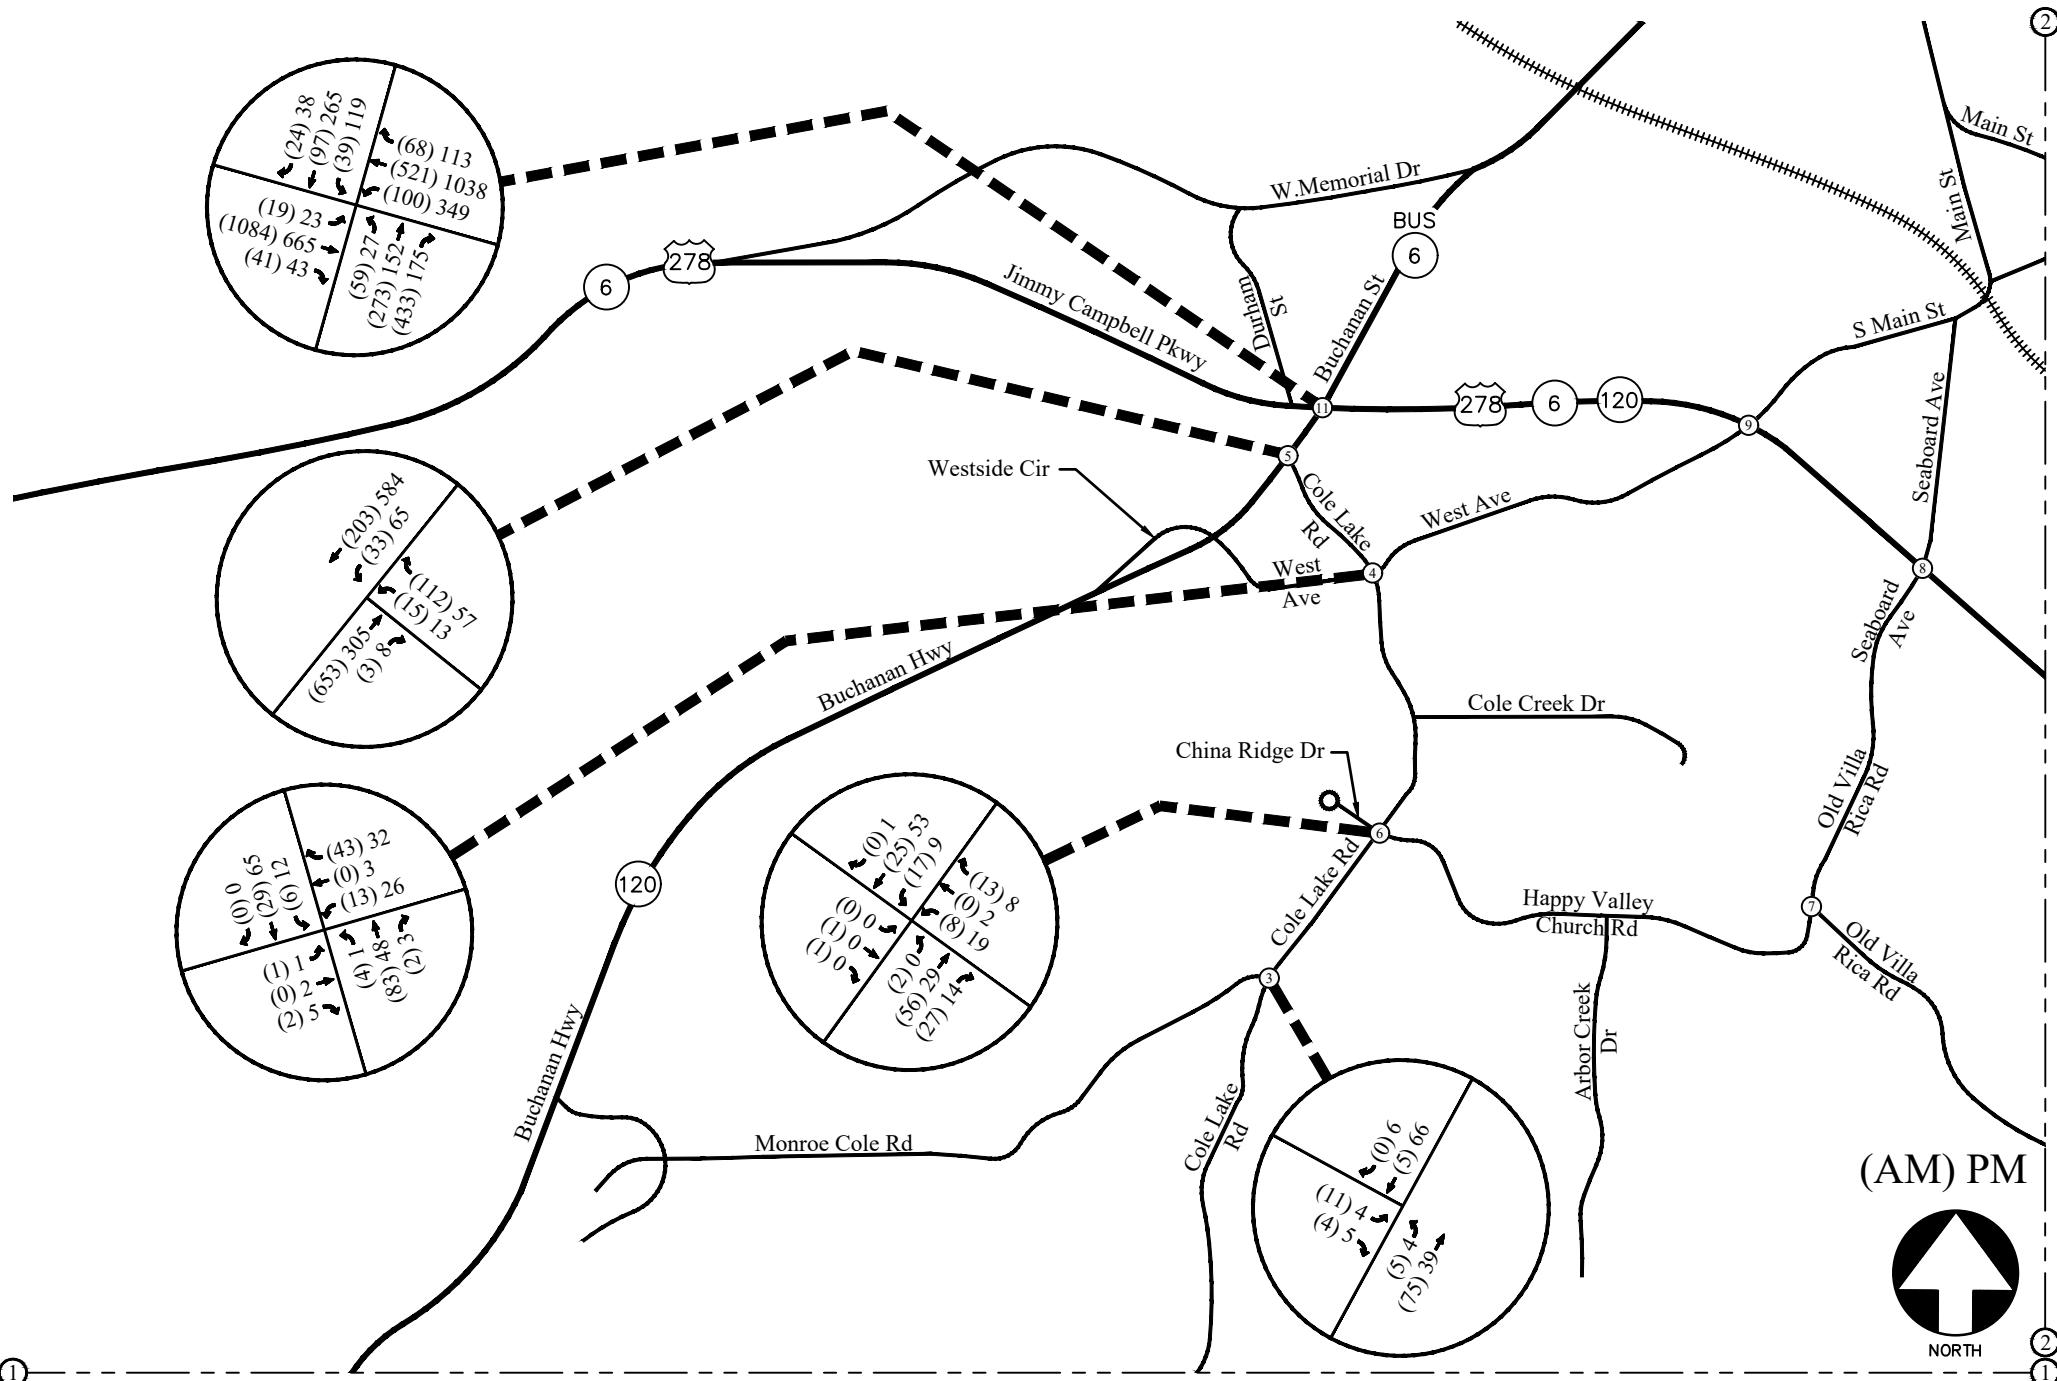

Annual Traffic Growth

In order to evaluate future traffic operations in this area, a projection of normal traffic growth was applied to the existing volumes. The Georgia Department of Transportation recorded average daily traffic volumes at several locations in the vicinity of the site. Reviewing the growth over the last three (2017-2019) years revealed growth of approximately 2.0% in the area. This growth factor was applied to the existing traffic volumes to estimate the future year traffic volumes prior to the addition of site-generated traffic. The resulting Future “No-Build” volumes on the roadway are shown in Figure 6A, 6B and 6C.

Planned and Programmed Improvements in Study Area

TABLE 5 – PLANNED AND PROGRAMMED IMPROVEMENTS

Item #	Project Name	From / To Points	Sponsor	GDOT PI #	ARC ID #	Design FY	ROW / UTL FY	CST FY
1	SR 61 (Villa Rica Highway): Segment 3 – Widening (2 lanes to 4 lanes)	From Dallas Nebo Road to US 278 (Jimmy Campbell Parkway)	GDOT	0013702	PA-061C1	2016	2019/2025	2025

GeoPI #0013702 Design:

GDOT planned improvement project (PI 0013702) was identified as a programmed improvement project that is projected to be completed in 2025. Since the proposed development is planned to be completed in 2026, the overlapping intersections in the study network and improved project that are included in the DRI study network are listed below and the programmed project will be analyzed with and without the widening project in the “No-Build” and “Build” conditions.

The following intersections will be considered with the programmed improvement project lane geometry in the analysis:

- SR 120 Connector (Scoggins Road) and SR 61 (Villa Rica Highway)
- US 278/ SR 6/ SR 120 (Jimmy Campbell Parkway) and SR 61 (Villa Rica Highway)/ SR 61 (Nathan Dean Boulevard)

As a part of widening project on SR 61 (Villa Rica Highway), system improvements were considered at the following intersections that are included in the DRI study network.

Intersection 2: SR 120 Connector (Scoggins Road) and SR 61 (Villa Rica Highway)

- Addition of a northbound through lane on SR 61 (Villa Rica Highway)
- Addition of a southbound through lane on SR 61 (Villa Rica Highway)

Intersection 10: US 278/ SR 6/ SR 120 (Jimmy Campbell Parkway) and SR 61 (Villa Rica Highway)

- Addition of a northbound through, left and right lane on SR 61 (Villa Rica Highway)
- Addition of a southbound through and left lane on SR 61 (Nathan Dean Boulevard)
- Addition of an eastbound left lane on US 278/ SR 6/ SR 120 (Jimmy Campbell Parkway)
- Addition of a westbound left lane on US 278/ SR 6/ SR 120 (Jimmy Campbell Parkway)

Future “No-Build” Traffic Operations

The future “No-Build” traffic operations were analyzed using the volumes in Figure 6A, 6B and 6C and the results are shown in Table 6.

TABLE 6 – FUTURE “NO-BUILD” INTERSECTION OPERATIONS

The results of future “No-Build” traffic operations show that the following intersection has LOS “E” for one or more approaches in the AM or PM peak hour or both:

- Intersection 10: US 278/ SR 6/ SR 120 (Jimmy Campbell Parkway) at SR 61 (Nathan Dean Boulevard)
- Intersection 12: SR 6 Business (Merchants Drive) at SR 61 (Nathan Dean Boulevard) / Hampton Drive
- Intersection 13: SR 61 (Nathan Dean Boulevard) at Henry Y Holland Drive

Recommended System Improvements

The following are system improvements that were identified from the “No-Build” condition analysis.

Intersection 12: SR 6 Business (Merchants Drive) at SR 61 (Nathan Dean Boulevard) / Hampton Drive

- Convert the existing shared through left turn to a dual left with shared through movement in one lane

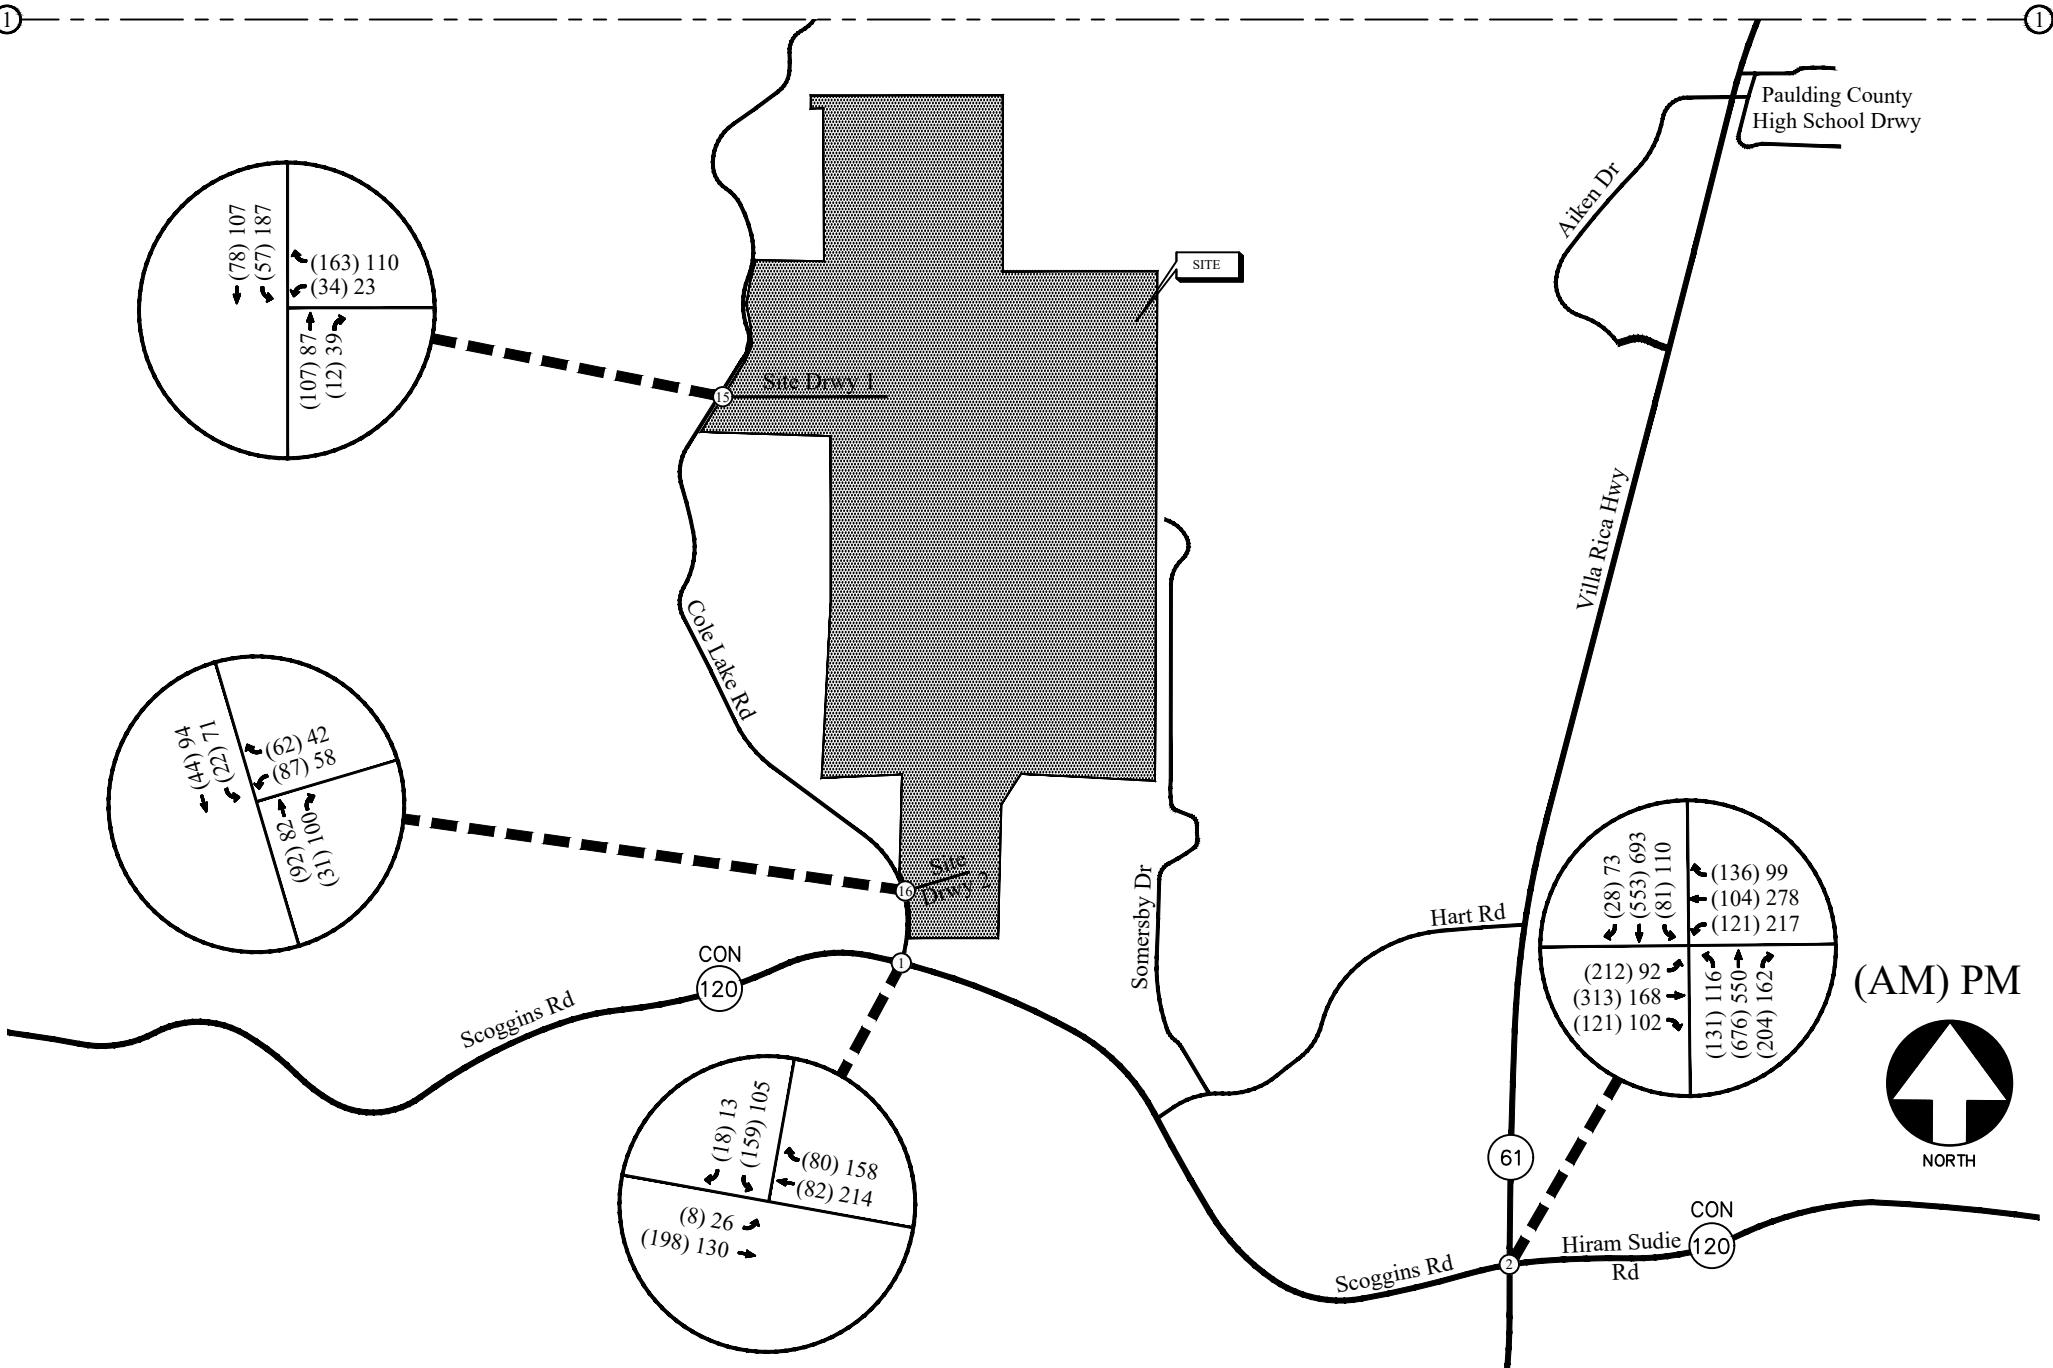

Intersection 13: SR 61 (Nathan Dean Boulevard) at Henry Y Holland Drive

- Installation of traffic signal when warranted by MUTCD

After the recommended system improvements are implemented, the intersections listed above will operate at LOS “D” or better in both the AM and PM peak hours.

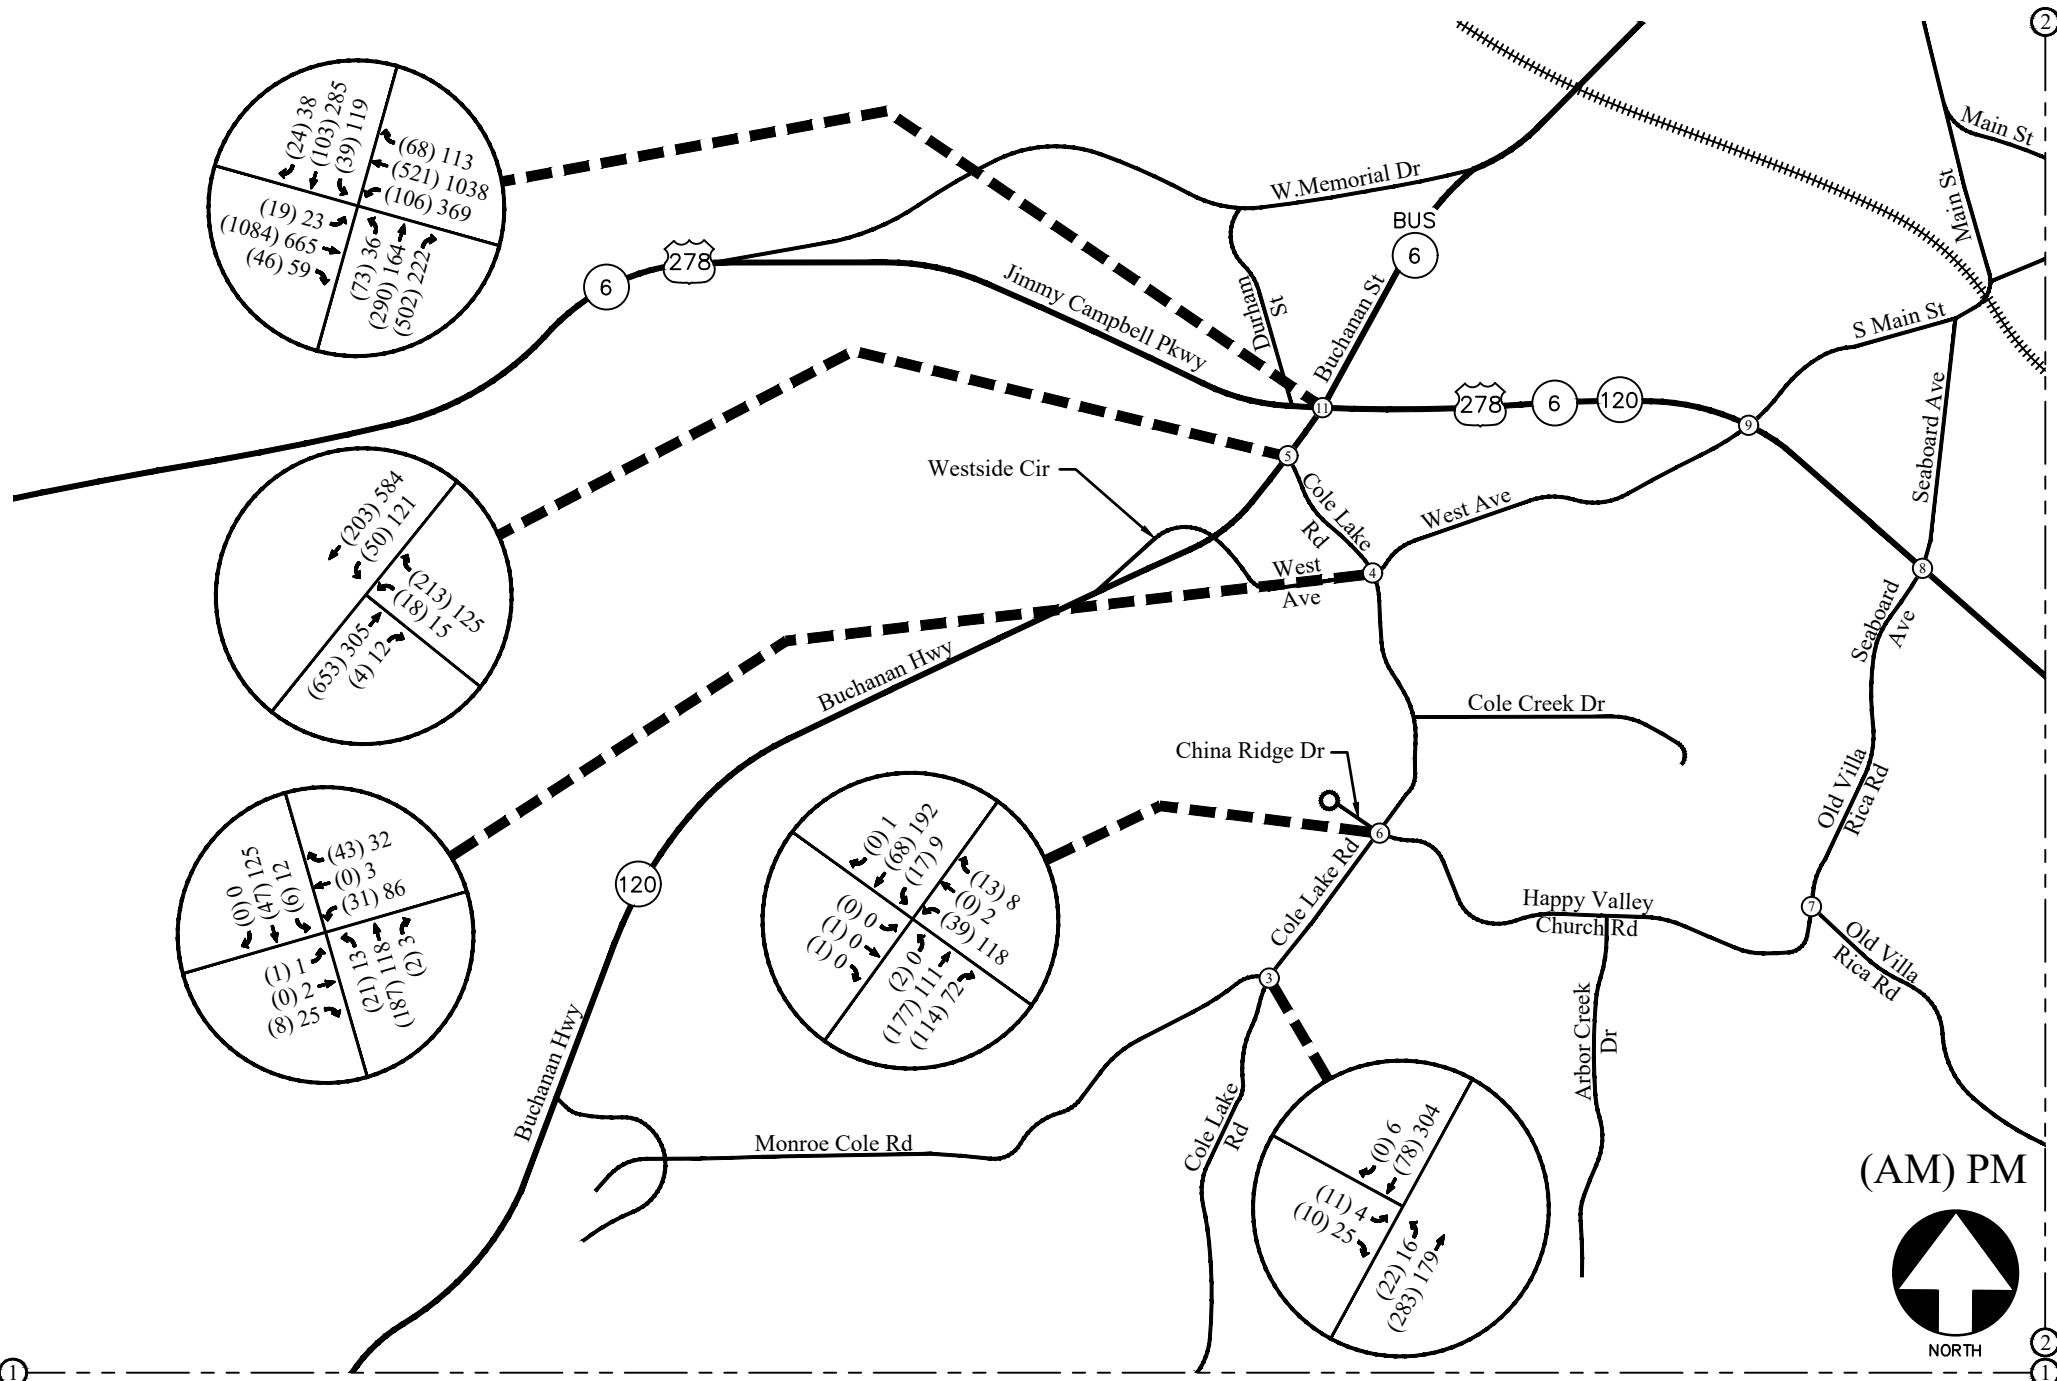

Future “Build” Conditions

The “Build” or development conditions include the estimated background traffic from the “No-Build” conditions plus the added traffic from the proposed development. In order to evaluate future traffic operations in this area, the additional traffic volumes from the site (Figures 5C, 5D and 5E) were added to base traffic volumes (Figure 6A, 6B and 6C) to calculate the future traffic volumes after the construction of the development. These total future traffic volumes are shown in Figure 7A, 7B and 7C.

Auxiliary Lane Analysis

Included below are analyses for left-turn lanes and deceleration lanes for all site driveways per GDOT standards. The analyses below are based off the trip distribution included in the “Trip Distribution” section. According to the trip distribution, the total 24-hour two-way volume entering and exiting the site is 6,318 vehicles. The AADT on Cole Lake Road is assumed to be less than 6,000 vehicles based on the GDOT volumes on the surrounding roadways.

Left Turn Lane Analysis

For two lane roadways with AADT's less than 6,000 vehicles and a posted speed limit of 35 mph, the daily site generated traffic left-turn movements threshold to warrant a left-turn lane is 300 left-turning vehicles a day. The projected left-turn volumes per day for each driveway is included in Table 7.

TABLE 7 – GDOT REQUIREMENTS FOR LEFT TURN LANES

Intersection	Left turn traffic (% total entering)	Left-turn Volume (vehicles/day)	Roadway Speed/ # lanes / ADT	GDOT Threshold (vehicles/day)	Warrants met?
Cole Lake Rd @ Site Drwy 1	47%	1485 $(\text{total trips}) \div 2 \times 0.47 = (6,318) \div 2 \times 0.47 = 1485$	35 mph / 2-Lane / < 6,000	300	Yes
Cole Lake Rd @ Site Drwy 2	18%	569 $(\text{total trips}) \div 2 \times 0.18 = (6,318) \div 2 \times 0.18 = 569$	35 mph / 2-Lane / < 6,000	300	Yes

A left turn lane is warranted at Site Driveway 1 and 2 on Cole Lake Road, per GDOT standards.

Deceleration Turn Lane Analysis

The daily site generated traffic right-turn movements threshold to warrant a deceleration lane is 200 right turning vehicles a day for two lane roadways with AADT's less than 6,000 vehicles and a posted speed limit of 35 mph. The projected right-turn volumes per day for each driveway is included in Table 8.

TABLE 8 – GDOT REQUIREMENTS FOR DECELERATION LANES

Intersection	Right-turn traffic (% total entering)	Right-turn Volume (vehicles/day)	Roadway Speed/ # lanes / ADT	GDOT Threshold (vehicles/day)	Warrants met?
Cole Lake Rd @ Site Drwy 1	10%	316 $(\text{total trips}) \div 2 \times 0.10 = (6,318) \div 2 \times 0.10 = 316$	35 mph / 2-Lane / < 6,000	200	Yes
Cole Lake Rd @ Site Drwy 2	25%	790 $(\text{total trips}) \div 2 \times 0.25 = (6,318) \div 2 \times 0.25 = 790$	35 mph / 2-Lane / < 6,000	200	Yes

A deceleration lane is warranted at Site Driveway 1 and 2 on Cole Lake Road, per GDOT standards.

Future “Build” Traffic Operations

The future “Build” traffic operations were analyzed using the volumes in Figure 7. The results of the future “Build” traffic operations analysis are shown in Table 9.

The results of future “Build” traffic operations show that the following intersection has LOS “E or F” for two approaches in the AM or PM peak hour or both:

- Intersection 12: SR 6 Business (Merchants Drive) at SR 61 (Nathan Dean Boulevard) / Hampton Drive

- Intersection 13: SR 61 (Nathan Dean Boulevard) at Henry Y Holland Drive

After the recommended system improvements are implemented, the following intersections will operate at LOS "C" or better in both the AM and PM peak hours.

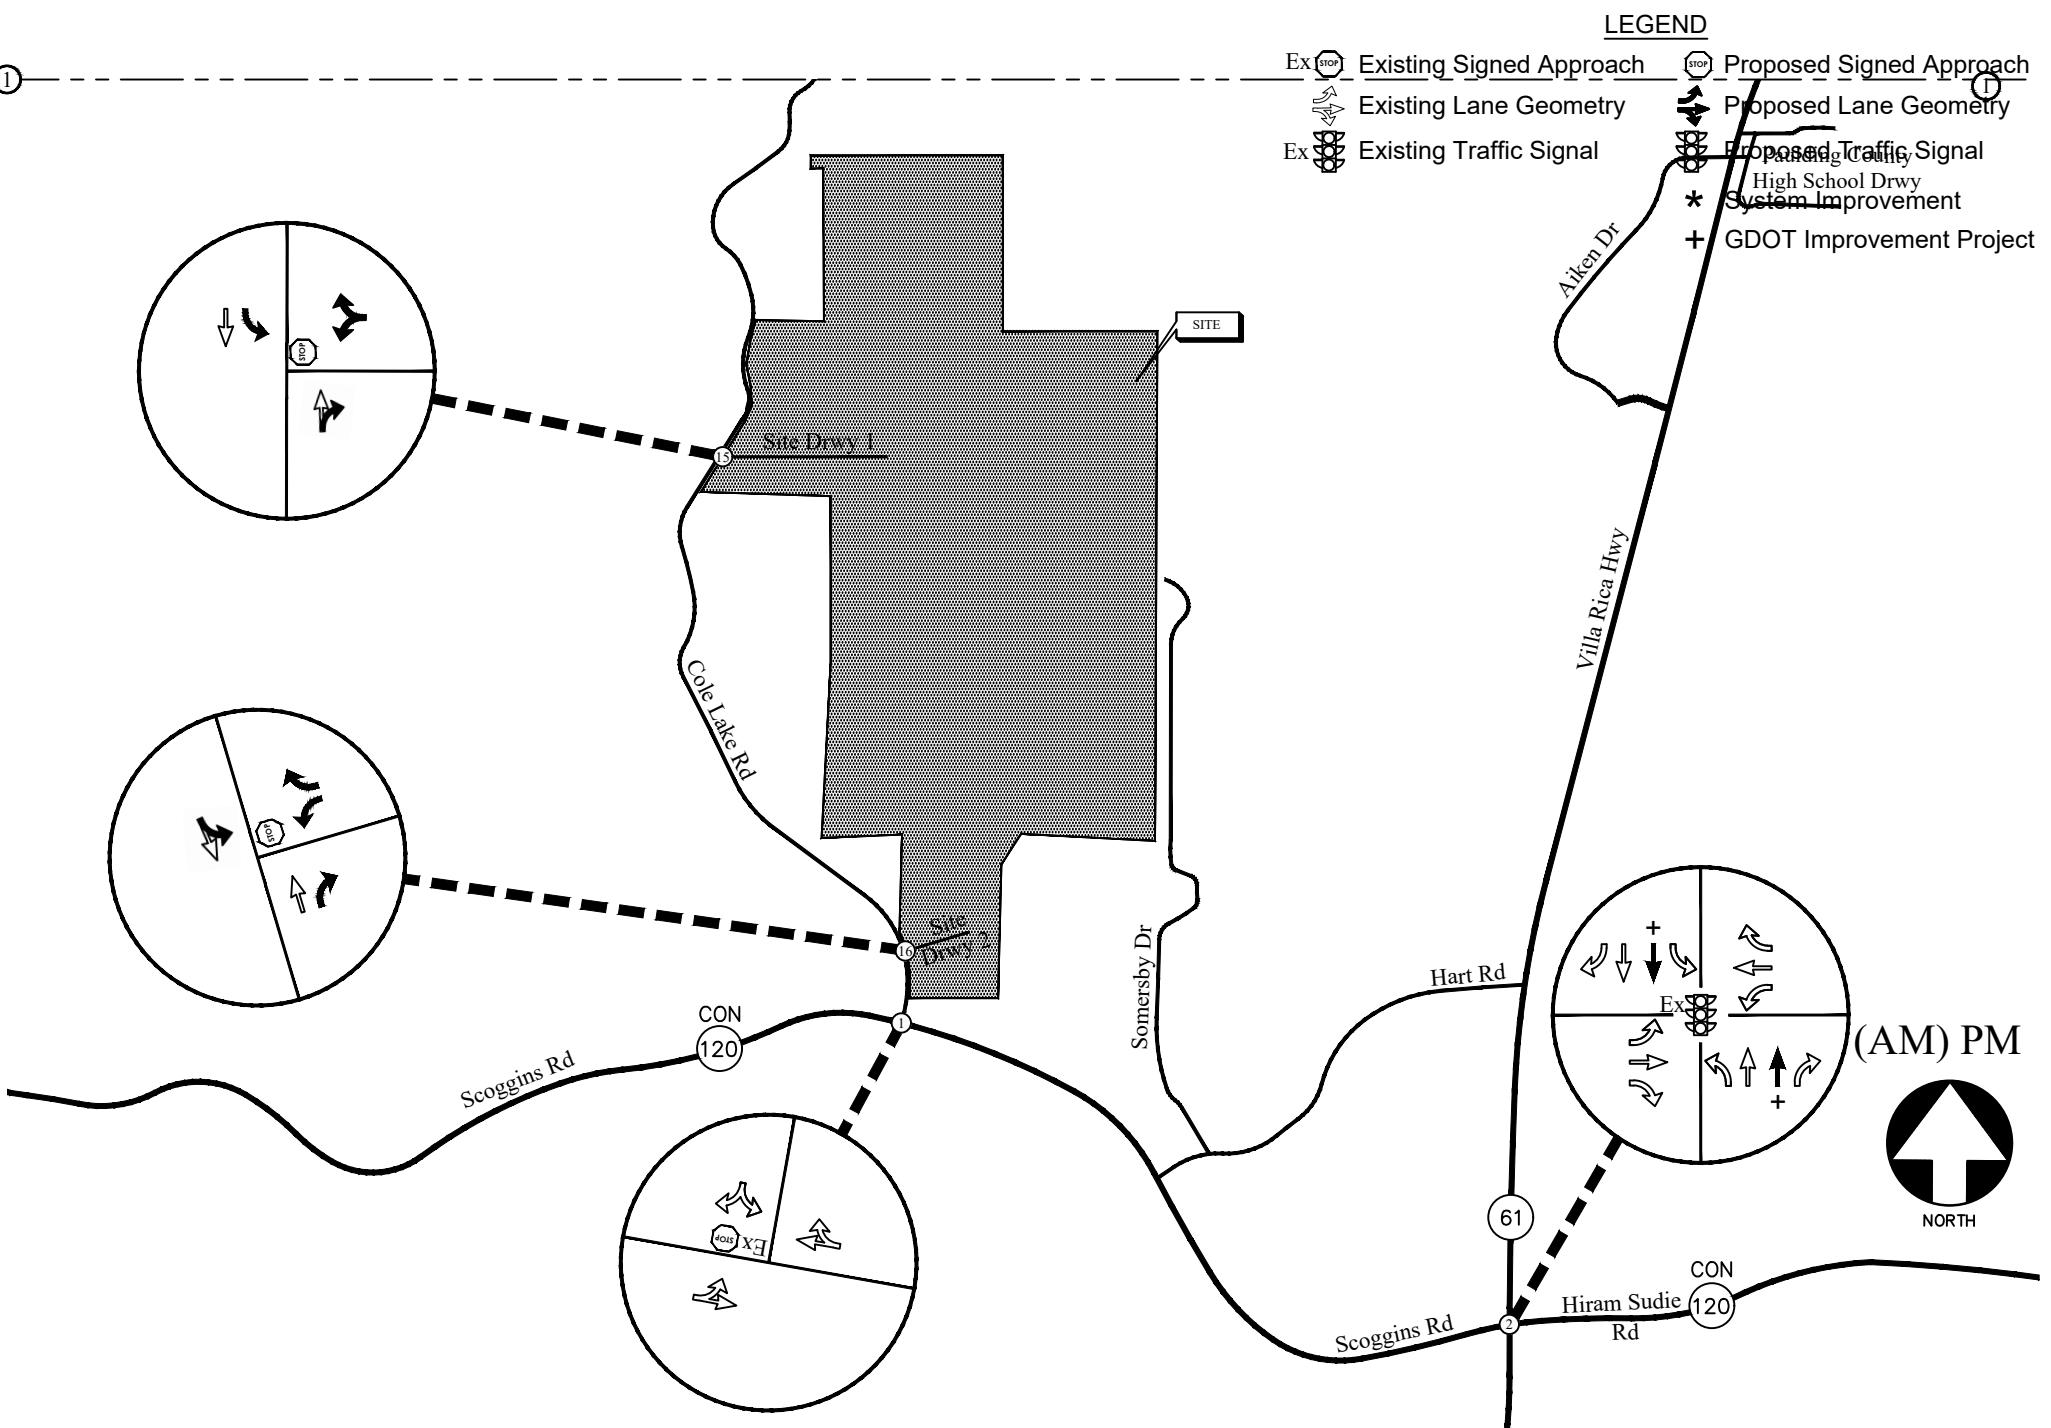

Intersection 12: SR 6 Business (Merchants Drive) at SR 61 (Nathan Dean Boulevard) / Hampton Drive

The northbound approach to the signalized intersection of SR 6 Business (Merchants Drive) at SR 61 (Nathan Dean Boulevard) / Hampton Drive will operate at level of service "E" in AM peak hour and "F" in PM peak hour. After the addition of left turn lane to the existing shared through-left lane on SR 61 (Nathan Dean Boulevard) as a system improvement, it will operate at level of service "D" in the AM and PM peak hour.

Intersection 13: SR 61 (Nathan Dean Boulevard) at Henry Y Holland Drive

The eastbound approach to the unsignalized intersection of SR 61 (Nathan Dean Boulevard) at Henry Y Holland Drive will operate at level of service "E" in PM peak hour. After the installation of traffic signal as a system improvement, the intersection will operate at an overall level of service "A" or better in both AM and PM peak hours.

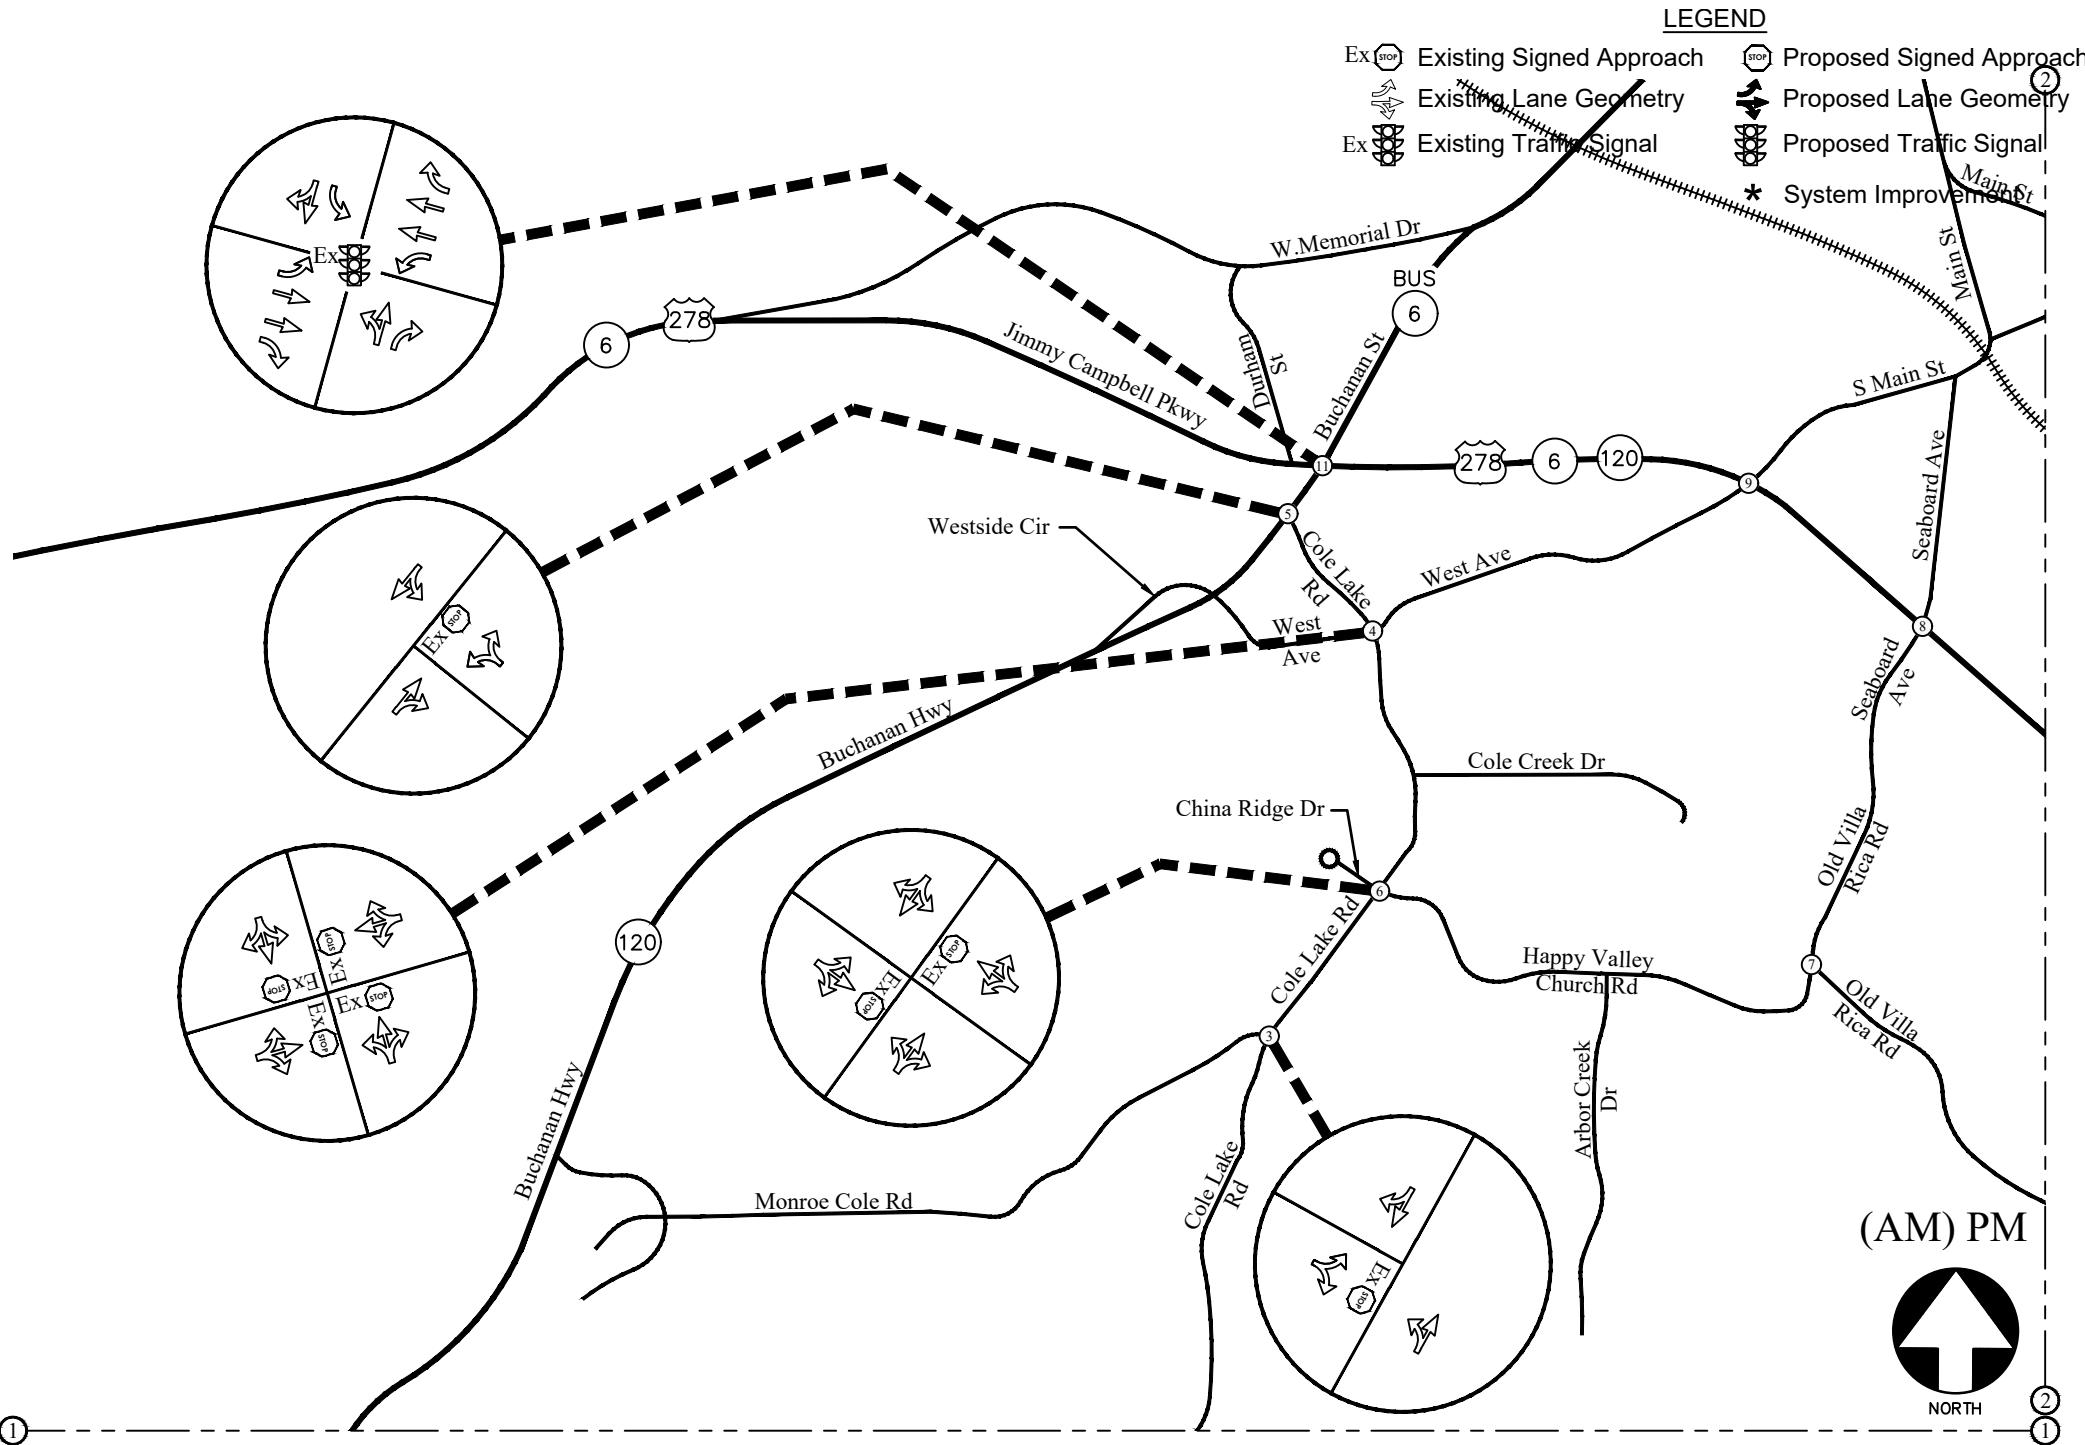

Recommendations for future traffic control and lane geometry are shown in Figure 8A, 8B and 8C.

CONCLUSIONS AND RECOMMENDATIONS

Traffic impacts were evaluated for the proposed residential development located to the east of Cole Lake Road and north of SR 120 Connector (Scoggins Road) in the City of Dallas, Georgia.

The development proposes full access at the following locations:

- Site Driveway 1: Full access driveway on Cole Lake Road
- Site Driveway 2: Full access driveway on Cole Lake Road

The AM and PM peak hours have been analyzed in this study. In addition to the site access points, this study includes the evaluation of traffic operations at the intersections of:

1. Cole Lake Road and SR 120 Connector (Scoggins Road)
2. SR 120 Connector (Scoggins Road) and SR 61 (Villa Rica Highway)
3. Cole Lake Road and Monroe Cole Road
4. West Avenue and Cole Lake Road
5. SR 120 (Buchanan Highway) and Cole Lake Road
6. Cole Lake Road and Happy Valley Church Road
7. Happy Valley Church Road and Old Villa Rica Road
8. US 278/ SR 6/ SR 120 (Jimmy Campbell Parkway) and Old Villa Rica Road
9. US 278/ SR 6/ SR 120 (Jimmy Campbell Parkway) and West Avenue/ South Main Street
10. US 278/ SR 6/ SR 120 (Jimmy Campbell Parkway) and SR 61 (Villa Rica Highway)/ SR 61 (Nathan Dean Boulevard)
11. US 278/ SR 6/ SR 120 (Jimmy Campbell Parkway) and SR 120 (Buchanan Highway)/ SR 6 Business (Buchanan Street)
12. SR 61 (Nathan Dean Boulevard) and SR 6 Business (Merchants Drive)/ Hampton Drive
13. SR 61 (Nathan Dean Boulevard) and Henry Y Holland Drive
14. SR 61 (Nathan Dean Boulevard) and Thomas B Murphy Drive

The analysis included the evaluation of Future operations for “No-Build” and “Build” conditions, both of which account for increases in annual growth of through traffic. The results of future “Build” traffic operations showed that the following intersection will operate at level of service “E or F” for one or more approaches in the AM or PM peak hour or both:

- Intersection 12: SR 6 Business (Merchants Drive) at SR 61 (Nathan Dean Boulevard) / Hampton Drive
- Intersection 13: SR 61 (Nathan Dean Boulevard) at Henry Y Holland Drive

After the recommended system improvements are implemented, the following intersections will operate at LOS “C” or better in both the AM and PM peak hours.

Intersection 12: SR 6 Business (Merchants Drive) at SR 61 (Nathan Dean Boulevard) / Hampton Drive

The northbound approach to the signalized intersection of SR 6 Business (Merchants Drive) at SR 61 (Nathan Dean Boulevard) / Hampton Drive will operate at level of service "E" in AM peak hour and "F" in PM peak hour. After the addition of left turn lane to the existing shared through-left lane on SR 61 (Nathan Dean Boulevard) as a system improvement, it will operate at level of service "D" in the AM and PM peak hour.

Intersection 13: SR 61 (Nathan Dean Boulevard) at Henry Y Holland Drive

The eastbound approach to the unsignalized intersection of SR 61 (Nathan Dean Boulevard) at Henry Y Holland Drive will operate at level of service "E" in PM peak hour. After the installation of traffic signal as a system improvement, the intersection will operate at an overall level of service "A" or better in both AM and PM peak hours.

Recommended System Improvements

The following are system improvements that were identified from the "No-Build" condition analysis.

Intersection 12: SR 6 Business (Merchants Drive) and SR 61 (Nathan Dean Boulevard) / Hampton Drive

- Convert the existing shared through left turn to a dual left with shared through movement in one lane

Intersection 13: SR 61 (Nathan Dean Boulevard) at Henry Y Holland Drive

- Installation of traffic signal when warranted by MUTCD warrants

Recommended Site Mitigation Improvements

Site Driveway 1: Full Access driveway on Cole Lake Road

- One entering and one exiting lane
- Stop sign controlled on the driveway approach with Cole Lake Road remaining free flow
- Left turn lane and deceleration lane for entering traffic

Site Driveway 2: Full Access driveway on Cole Lake Road

- One entering and two exiting lanes
- Stop sign controlled on the driveway approach with Cole Lake Road remaining free flow
- Left turn lane and deceleration lane for entering traffic

FUTURE DEVELOPMENT MAP

GRTA Letter of Understanding

LETTER OF UNDERSTANDING

11 April, 2022

Doug Patten
David Pearson Communities, LLC
2000 First Dr, Suite 400
Marietta, GA 30062

RE: **Canebreak West (DRI#: 3599)**

Dear Doug Patten:

The purpose of this Letter of Understanding is to document the discussions during the Methodology Meeting held virtually on March 14, 2022 regarding **Canebreak West** Development of Regional Impact (DRI). The *GRTA DRI Review Procedures*, as well as the inputs and parameters documented in this Letter of Understanding and the revised Methodology Meeting Packet, shall be adhered to in preparing the GRTA required Transportation Study.

PROJECT OVERVIEW

- The proposed site is located to the east of Cole Lake Road and north of SR 120 (Scoggins Road).
- The proposed development includes 670 units of single family detached housing.
- The projected build-out is one phase to be completed by 2026.
- The proposed development includes (2) site accesses along Cole Lake Road.
- The DRI trigger for this development is an annexation and rezoning.
- The vehicular trip generation is estimated to be 6,318 net daily trips based on the *ITE Trip Generation Manual 11th edition*.
- The applicant is applying for approval under GRTA's non-expedited Traffic Impact Study review process.

STUDY NETWORK

1. Cole Lake Road (South) and SR 120 Connector (Scoggins Road)
2. SR 120 Connector (Scoggins Road) and SR 61 (Villa Rica Highway)
3. Cole Lake Road and Monroe Cole Road
4. West Avenue and Cole Lake Road
5. SR 120 (Buchanan Highway_) and Cole Lake Road
6. Happy Valley Church Road and Cole Lake Road
7. Happy Valley Church Road and Old Villa Rica Road
8. US 278 (Jimmy Campbell Road) and Old Villa Rica Road
9. West Avenue and US 278 (Jimmy Campbell Road)
10. US 278 (Jimmy Campbell Road) and Nathan Dean Boulevard / Villa Rica Highway
11. US 278 (Jimmy Campbell Road) and Buchanan Street
12. Nathan Dean Boulevard and SR 6 (Merchants Drive)
13. Nathan Dean Boulevard and Henry Y Holland Drive
14. Nathan Dean Boulevard and Thomas B Murphy Drive

METHODOLOGY MEETING PACKET INPUTS & PARAMETERS

- The Site Plan shall meet all the applicable requirements in Section 7.1 of the *GRTA DRI Review Procedures*.
- All Study Network intersections shall be analyzed during the AM and PM peak hours for (1) existing conditions, (2) future “no-build” conditions, and (3) future “build” conditions as specified in the *GRTA DRI Review Procedures*.
- This DRI shall be modeled and reviewed in one phase to be completed by 2026.
- The Level of Service (LOS) standard for all analysis shall be LOS D unless specified otherwise in Section 3.2.2.1. For example, a LOS E standard is allowed if the existing LOS for the intersection or approach is a LOS F.
- Default values should not be assumed in the traffic modeling. Existing conditions shall be taken into account as required in Section 3.2.2.
- The trip generation calculations in the revised Methodology Meeting Packet shall be used in the Transportation Study. Mixed-use and pass-by reductions are not allowed for this site. Pass-by reductions shall not exceed 15% of a roadway's traffic volume standard established in Appendix 7.2.
- The trip assignment approach in the revised Methodology Meeting Packet shall be utilized for all Study Network intersection movements.
- The applicant shall research TIP, STIP, RTP and GDOT's construction work program, as well as any local government and transit operator plans (SPLOST, CIP, etc.), to determine the open date, sponsor, cost of the project, funding source(s), for future roadway projects in the project vicinity. Programmed transportation projects anticipated to open on or before the Build Out year of the DRI Project shall be modeled as completed in the No-Build and Build conditions unless approved otherwise.
- A 2.0% annual traffic Background Growth Rate shall be used for all roadways.
- Capacity analysis shall be based on turning movement counts collected not more than 12-months prior to the date of the actual DRI submittal to GRTA, unless specified otherwise. As specified in Section 2.3, turning movement counts shall be collected while local schools are in session, on a Tuesday, Wednesday or Thursday (unless approved otherwise) and not during holiday periods (weeks of July 4th, Thanksgiving and +/- 5 days of Christmas).
- COVID-19: The transportation analysis shall utilize existing turning movement count data when available during COVID. All counts older than a year shall be grown by the Background Growth Rate unless approved otherwise. If new counts are required, a control count location where existing count data is available shall be used for developing traffic growth extrapolation rates. The traffic engineer shall submit the proposed growth rates to GRTA, GDOT and local government stakeholders for input and GRTA approval before submitting the Transportation Study.

ADDITIONAL REQUIREMENTS

All applicable requirements of the *GRTA DRI Review Procedures* must be met for the Transportation Study to be considered complete. The *GRTA DRI Review Procedures* are located on GRTA's DRI website: <https://www.srta.ga.gov/programs-projects/dev-of-regional-impact/>. Contact GRTA staff if you have any questions on these requirements.

The Transportation Study shall also include as attachments the native LOS modeling file (i.e., Synchro modeling files) as well as the modeling reports (PDFs) for all Study Network intersections for the Existing, No-Build and Build conditions for all phases. The PDF reports shall be numbered (in page headers) and organized in order according to the Study Network numbering sequence in this Letter of Understanding. The reports shall also be organized in the following sequence: *Existing condition AM, Existing condition PM, No-build condition AM, No-Build condition*

PM, Build condition AM, Build condition PM. If improvements are modeled, those PDFs shall be labeled as such and follow the appropriate condition's applicable peak period.

The Transportation Study appendices shall also include all turning movement count data, regardless of if using historic data or newly collected turning movement counts.

When documenting any Queue Length impacts required in Section 3.2.3.6, the TIS Executive Summary shall also note any individual *movements* not meeting the LOS standard where the DRI Project adds trips in the Build condition and exceeds available storage capacity for that movement.

When identifying mitigations in the existing, no-build and build conditions, the mitigations identified in preceding conditions shall not be modeled as complete when conducting the LOS analysis. The same mitigation may still be proposed as mitigation in the subsequent condition but it shall not be included as completed in the default analysis. For example, a turn lane may be identified as a needed improvement in the no-build condition. The turn lane should not be modeled as completed in the build condition. The turn lane should only be modeled as complete in the no-build with improvements condition and the build with improvements condition.

DRI REVIEW PACKAGE SUBMITTAL

GRTA will begin reviewing the DRI once the DRI Review Package is submitted and deemed complete. The DRI Review Package includes: the permitting Local Government inputting both Department of Community Affairs (DCA) forms into the DCA DRI website; and the **Traffic Engineer submittal of the GRTA Transportation Study (including LOS appendices, traffic count data and any other required attachments) and Site Plan to GRTA staff and ALL stakeholders included in the CC list of this Letter of Understanding.**

All DRI Review Packages shall be submitted electronically via email to all stakeholders in the CC list of the Letter of Understanding. If the DRI Review Package total file size is greater than 10 MB, the DRI Review Package shall be submitted via email with a FTP link provided for downloading the files.

Please contact me if you have any questions about the Letter of Understanding or the *GRTA DRI Review Procedures*.

Sincerely,

Elizabeth Davis
Senior Transit and Transportation Planner

Fact Sheets for Planned and Programmed Improvements

Short Title	SR 61 (VILLA RICA HIGHWAY): SEGMENT 3 - WIDENING FROM DALLAS-NEBO ROAD TO US 278 (JIMMY CAMPBELL PARKWAY)		
GDOT Project No.	0013702		
Federal ID No.	NH-018-1(59)		
Status	Programmed		
Service Type	Roadway / General Purpose Capacity		
Sponsor	GDOT		
Jurisdiction	Paulding County		
Analysis Level	In the Region's Air Quality Conformity Analysis		
Existing Thru Lane	2	LCI	<input type="checkbox"/>
Planned Thru Lane	4	Flex	<input type="checkbox"/>

Network Year 2030
Corridor Length 3.8 miles

Detailed Description and Justification

This project will widen and reconstruct SR 61 (Villa Rica Highway) from Dallas-Nebo Road to US 278 (Jimmy Campbell Parkway) from a 2 lane roadway to a 4 lane roadway. Included will be a 20-foot raised median, curb and gutter, and sidewalk. The existing bridge structure over the Silver Comet Trail will be replaced with a 14-foot by 10-foot pedestrian culvert.

*- RECOMMENDATION ON FILE

PLANNING, APPROVED CONCEPT, AND BACKGROUND

Project Justification Statement: Project No. 0013702 (Fmr. 621570-) provides additional capacity required for future growth in the area, as SR 61 is the only continuous north-south corridor in Paulding County linking Dallas to both Cartersville (north) and I-20 (south). The purpose of this widening project is to ease traffic congestion and decrease crash frequency and/or severity along this busy stretch of roadway.

Existing conditions: This project is approximately 4.37 miles in length, and primarily consists of a two-lane section with 12-foot lanes and 4-foot grass shoulders. A three-lane section is present for approximately 0.25 miles. There are four signalized intersections along the project, at SR 120 Connector, Aikin Drive/Paulding County High School, US 278/SR 120/Dallas Bypass, and Thomas B. Murphy Drive. An existing bridge crosses the Silver Comet Trail to the south of US 278/SR 120/Dallas Bypass. There is one double 5'x5' box culvert, and two single 4'x4' box culverts. Multiple utilities are present, as well as possible USTs.

Description of the approved concept: The approved concept for Project No. 0013702 proposes the widening and reconstruction of SR 61 from south of CR 467/Dallas Nebo Road to US 278/SR 120/Dallas Bypass, a length of approximately 4.37 miles. The existing roadway consists of 2-12 ft lanes with 4 ft grass shoulders, and 3-12 ft lanes are present for approximately 0.25 miles. From the beginning of the project for approximately 1 mile heading toward SR 120 Connector, proposed improvements include 2-11 ft lanes in each direction, a variable flush median, and a 12 ft urban shoulder with 5 ft sidewalks. For the remainder of the project for approximately 3.5 miles, from SR 120 Connector to US 278, proposed improvements include 2-11 ft lanes in each direction, a raised 20 ft median and a 12 ft urban shoulder with 5 ft sidewalks. The project is entirely in Paulding County, and approximately 0.38 miles is within Dallas city limits.

Federal Oversight: PoDI Exempt State Funded Other

Open Year (2021): 24,600 Design Year (2041): 42,900

Functional Classification (Mainline): Urban Minor Arterial Street

VE Study anticipated: No Yes Completed – Date: 5/23/2008

PROPOSED REVISIONS

Approved Features:	Proposed Features:
The approved project scope mentions to widen SR 61 to a 4 lane divided roadway with a 20 ft raised median, 2 12 ft travel lanes in each direction, and 10 ft rural shoulder with 4 ft paved from SR 120 Connector to US 278/SR 6.	The proposed revision to the approved project scope will widen SR 61 to a 4 lane divided roadway with a 20 ft raised median, 2-11 ft lanes traveling in each direction, and 12 ft urban shoulders with a 2 ft grass strip and 5 ft sidewalks from Dallas Nebo Rd to US 278/SR 6.
The approved project scope mentions to construct a new 135 ft x 38 ft bridge over the Silver Comet Trail.	The proposed revision to the approved project scope will construct a 14 ft x 10 ft x 170 ft long box culvert over Silver Comet Trail.

<p>The approved project scope was installing at-grade side street stop controlled intersections at Aiken Ridge Rd. (South) and County Square.</p>	<p>The proposed revision to the approved project scope will culd-a-sac Aiken Ridge Rd. (South), close off the Country Square Way access to SR 61, and redirect traffic to use the relocated Country Square Trail/Ponderosa Drive SR 61 median break.</p>
<p>Reason(s) for change: The above changes are the result of updated traffic volumes and commitments agreed to in the May 2008 VE Study.</p>	

Design Variances and/or Exceptions needed: A Design Variances is required for the 8ft raised median width from STA 1067+00 to STA 1078+35 in order to go between the Bethany Church Cemeteries on both sides of SR 61.

ENVIRONMENTAL AND PERMITS

Potential environmental impacts of proposed revision: Possible changes to impacts to streams and wetlands. Anticipate a Section 404 Nationwide Permit 14 and a buffer variance will be required. Additional structures that are now 50 years or older have been identified but are not anticipated to be eligible for the National Register of Historic Places.

Have proposed revisions been reviewed by environmental staff? No Yes

Environmental responsibilities (Studies/Documents/Permits): Edwards-Pitman, environmental consultant, for special studies, 404 permit, and buffer variance.

Air Quality:

Is the project located in an Ozone Non-attainment area? No Yes

Is a Carbon Monoxide hotspot analysis required? No Yes

The project is included in the 2016-2021 TIP as PA-061C1, SR 61 (Villa Rica Highway): Segment 3 – Widening from Dallas-Nebo Road to US 278 (Jimmy Campbell Parkway). The project is described in the TIP as two existing lanes with four planned lanes and a length of 3.8 miles. The TIP listing has ROW in 2019 and CST in LR 2031-2040.

Water Quality Requirements: Paulding County is in an MS4 Permit Area. The need for a Special Provision for protected aquatic species will be determined following the updated aquatic surveys.

Environmental Comments and Information:

NEPA: This project is not federally funded and will not require a NEPA or GEPA document.

Ecology: Possible changes in impacts to streams and wetlands. Updated protected species lists for Paulding County. Survey for Georgia Aster required. New aquatic survey required.

Archeology: Additional archaeology surveys may be required if the project footprint extends beyond previous archaeology coverage.

History: Additional eligible resources are not anticipated. Effects to previously identified eligible resources will need to be evaluated.

Air Quality: An updated air assessment with modeling is required.

Noise Effects: Noise impacts will be assessed for eligible historic resources.

Public Involvement: Expect to hold a PIOH.

PROJECT COST AND ADDITIONAL INFORMATION

Item	Estimated Cost	Date of Estimate	Funded By
Preliminary Engineering (PE):	\$3,000,000.00		GDOT
Environmental Mitigation:	\$292,250.00	3-20-17	
Base Construction Cost:	\$28,217,403.81		
Engineering and Inspection:	\$2,821,740.38		
Contingencies:	\$4,655,871.63		
Liquid AC Adjustment:	\$846,568.24		
<u>Total Construction Cost:</u>	<u>\$36,541,584.06</u>	5-31-17	GDOT
Right-of-Way:	\$8,581,000.00	5-19-17	GDOT
Utilities (reimbursable costs):	\$3,719,133.00	3-15-17	GDOT
TOTAL PROJECT COST:	\$52,133,967.06		

Recommendation: Recommend that the proposed revision to the concept be approved for implementation.

Comments: None.

Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 15 (13%), Referenced to phase 2:SBTL and 6:NBTL, Start of Green

Natural Cycle: 75

Control Type: Actuated-Coordinated

~ Volume exceeds capacity, queue is theoretically infinite.

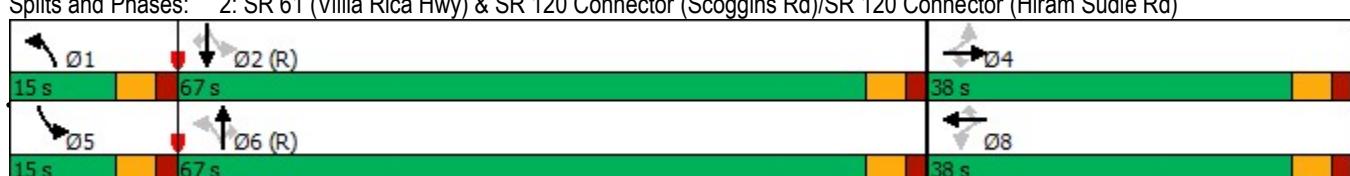

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 2: SR 61 (Villa Rica Hwy) & SR 120 Connector (Scoggins Rd)/SR 120 Connector (Hiram Sudie Rd)

Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 54 (45%), Referenced to phase 2:WBTL and 6:EBTL, Start of Green

Natural Cycle: 145

Control Type: Actuated-Coordinated

~ Volume exceeds capacity, queue is theoretically infinite.

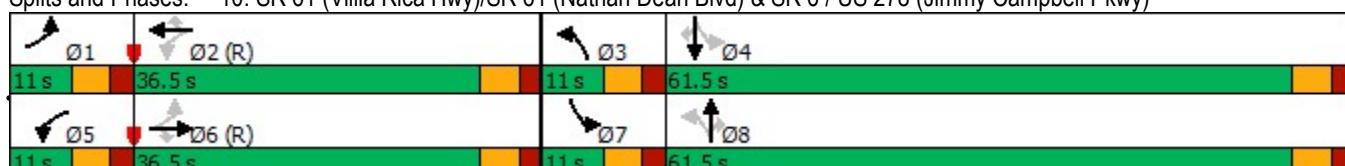

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 10: SR 61 (Villa Rica Hwy)/SR 61 (Nathan Dean Blvd) & SR 6 / US 278 (Jimmy Campbell Pkwy)

Intersection Summary

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 61 (55%), Referenced to phase 2:WBTL and 6:EBTL, Start of Green

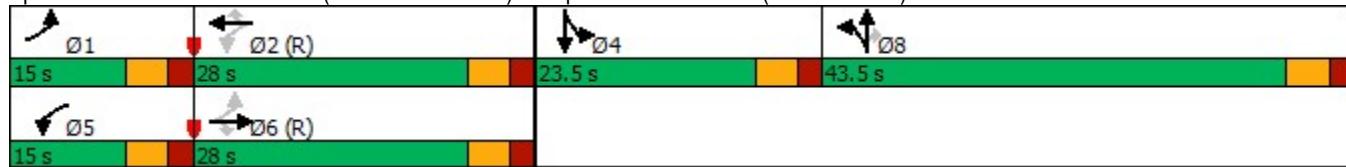

Natural Cycle: 110

Control Type: Actuated-Coordinated

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 12: SR 61 (Nathan Dean Blvd)/Hampton Dr & SR 6 Bus (Merchants Dr)

Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

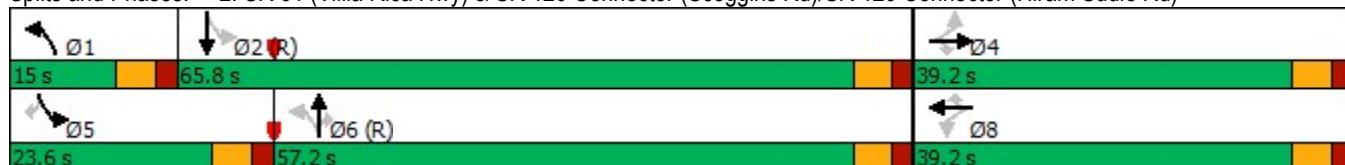

Offset: 0 (0%), Referenced to phase 2:SBTL and 6:NBTL, Start of Green

Natural Cycle: 80

Control Type: Actuated-Coordinated

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 2: SR 61 (Villa Rica Hwy) & SR 120 Connector (Scoggins Rd)/SR 120 Connector (Hiram Sudie Rd)

HCM 6th Signalized Intersection Summary

Intersection Summary

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 0 (0%), Referenced to phase 2:WBTL and 6:EBTL, Start of Green

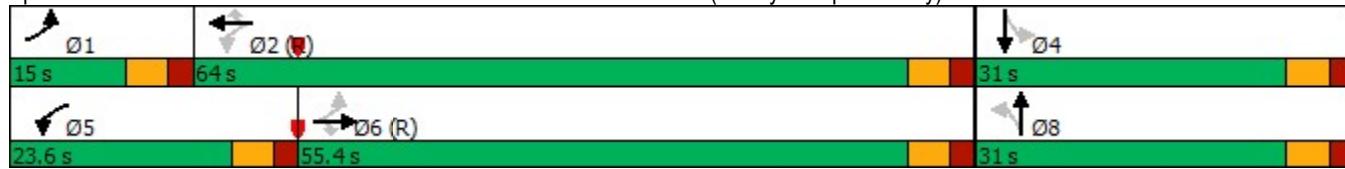

Natural Cycle: 90

Control Type: Actuated-Coordinated

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 8: Old Villa Rica Rd/Seaboard Dr & SR 6 / US 278 (Jimmy Campbell Pkwy)

Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 15 (13%), Referenced to phase 2:SBTL and 6:NBTL, Start of Green

Natural Cycle: 75

Control Type: Actuated-Coordinated

~ Volume exceeds capacity, queue is theoretically infinite.

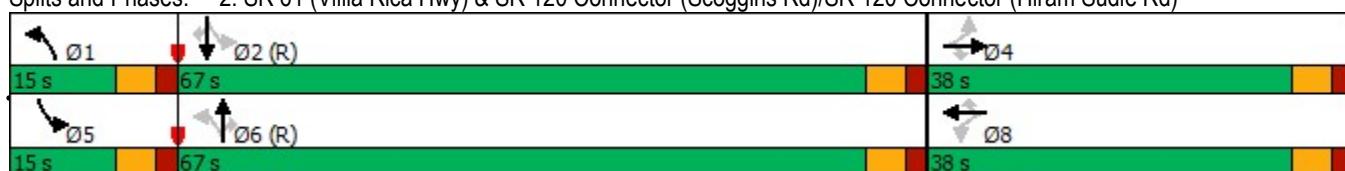

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 2: SR 61 (Villa Rica Hwy) & SR 120 Connector (Scoggins Rd)/SR 120 Connector (Hiram Sudie Rd)

Intersection Summary

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 0 (0%), Referenced to phase 2:WBTL and 6:EBTL, Start of Green

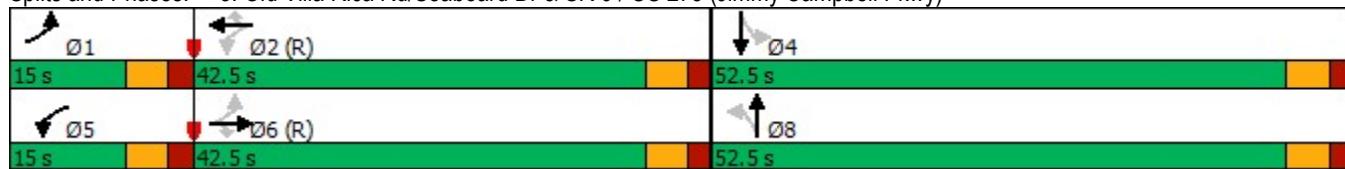

Natural Cycle: 135

Control Type: Actuated-Coordinated

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 8: Old Villa Rica Rd/Seaboard Dr & SR 6 / US 278 (Jimmy Campbell Pkwy)

HCM 6th Signalized Intersection Summary

Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 54 (45%), Referenced to phase 2:WBTL and 6:EBTL, Start of Green

Natural Cycle: 145

Control Type: Actuated-Coordinated

~ Volume exceeds capacity, queue is theoretically infinite.

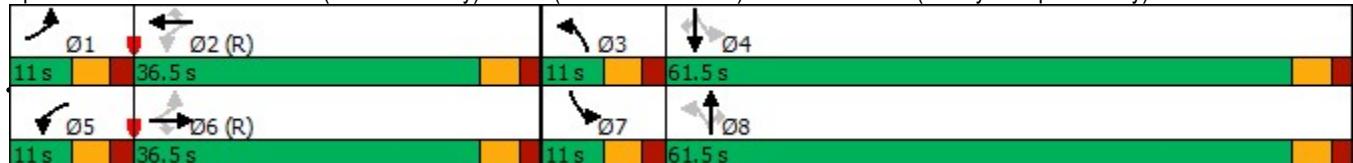

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 10: SR 61 (Villa Rica Hwy)/SR 61 (Nathan Dean Blvd) & SR 6 / US 278 (Jimmy Campbell Pkwy)

Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 0 (0%), Referenced to phase 2:SBTL and 6:NBTL, Start of Green

Natural Cycle: 80

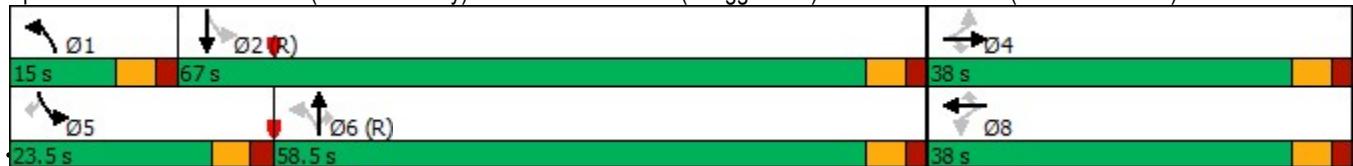

Control Type: Actuated-Coordinated

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 2: SR 61 (Villa Rica Hwy) & SR 120 Connector (Scoggins Rd)/SR 120 Connector (Hiram Sudie Rd)

HCM 6th Signalized Intersection Summary

Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 15 (13%), Referenced to phase 2:SBTL and 6:NBTL, Start of Green

Natural Cycle: 65

Control Type: Actuated-Coordinated

~ Volume exceeds capacity, queue is theoretically infinite.

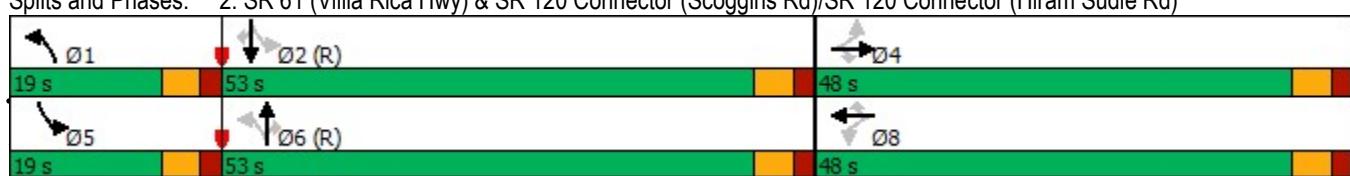

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 2: SR 61 (Villa Rica Hwy) & SR 120 Connector (Scoggins Rd)/SR 120 Connector (Hiram Sudie Rd)

Intersection Summary

Cycle Length: 120

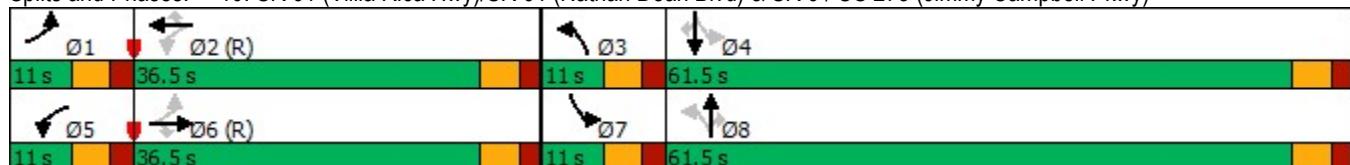

Actuated Cycle Length: 120

Offset: 0 (0%), Referenced to phase 2:WBTL and 6:EBTL, Start of Green

Natural Cycle: 125

Control Type: Actuated-Coordinated

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 11: SR 120 (Buchanan Hwy)/SR 6 BUS (Buchanan St) & SR 6 / US 278 (Jimmy Campbell Pkwy)

HCM 6th Signalized Intersection Summary

Intersection Summary

Cycle Length: 110

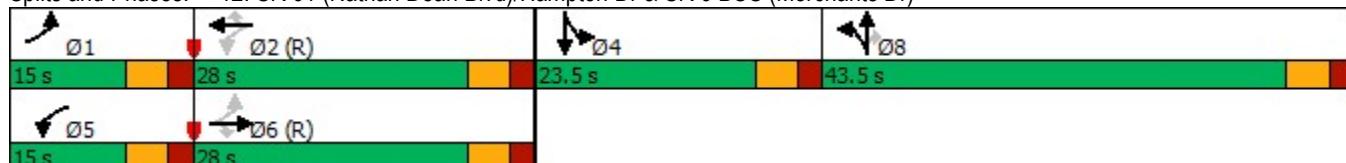

Actuated Cycle Length: 110

Offset: 0 (0%), Referenced to phase 2:WBTL and 6:EBTL, Start of Green

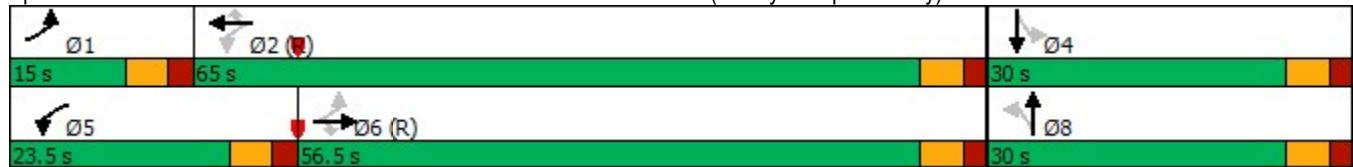

Natural Cycle: 90

Control Type: Actuated-Coordinated

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 8: Old Villa Rica Rd/Seaboard Dr & SR 6 / US 278 (Jimmy Campbell Pkwy)

HCM 6th Signalized Intersection Summary

Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 0 (0%), Referenced to phase 2:WBTL and 6:EBTL, Start of Green

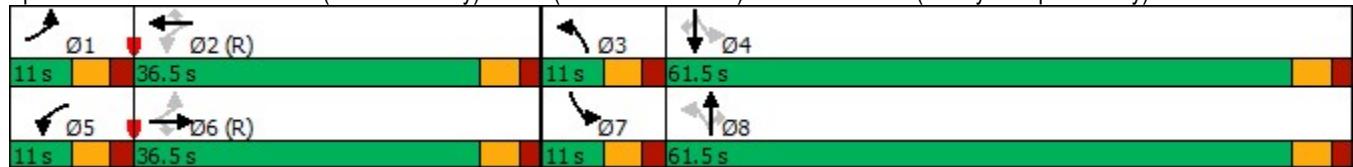

Natural Cycle: 145

Control Type: Actuated-Coordinated

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 10: SR 61 (Villa Rica Hwy)/SR 61 (Nathan Dean Blvd) & SR 6 / US 278 (Jimmy Campbell Pkwy)

Intersection Summary

Cycle Length: 120

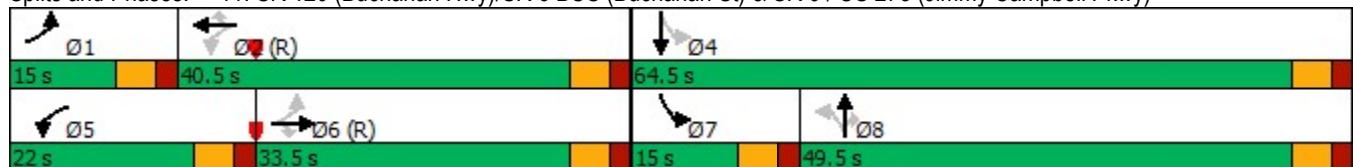

Actuated Cycle Length: 120

Offset: 15 (13%), Referenced to phase 2:SBTL and 6:NBTL, Start of Green

Natural Cycle: 80

Control Type: Actuated-Coordinated

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 2: SR 61 (Villa Rica Hwy) & SR 120 Connector (Scoggins Rd)/SR 120 Connector (Hiram Sudie Rd)

Intersection Summary

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 0 (0%), Referenced to phase 2:WBTL and 6:EBTL, Start of Green

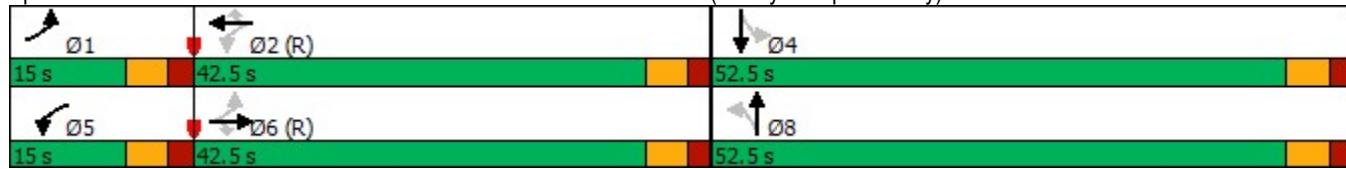

Natural Cycle: 135

Control Type: Actuated-Coordinated

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 8: Old Villa Rica Rd/Seaboard Dr & SR 6 / US 278 (Jimmy Campbell Pkwy)

HCM 6th Signalized Intersection Summary

Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 54 (45%), Referenced to phase 2:WBTL and 6:EBTL, Start of Green

Natural Cycle: 145

Control Type: Actuated-Coordinated

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 10: SR 61 (Villa Rica Hwy)/SR 61 (Nathan Dean Blvd) & SR 6 / US 278 (Jimmy Campbell Pkwy)

Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 0 (0%), Referenced to phase 2:SBTL and 6:NBT, Start of Green

Natural Cycle: 90

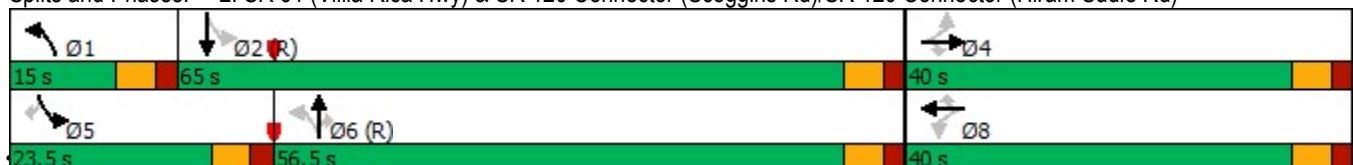

Control Type: Actuated-Coordinated

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 2: SR 61 (Villa Rica Hwy) & SR 120 Connector (Scoggins Rd)/SR 120 Connector (Hiram Sudie Rd)

HCM 6th Signalized Intersection Summary

Intersection Summary

HCM 6th Ctrl Delay 62.0
HCM 6th LOS E

Notes

User approved volume balancing among the lanes for turning movement.

Unsignalized Delay for [NBR, EBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 15 (13%), Referenced to phase 2:SBTL and 6:NBTL, Start of Green

Natural Cycle: 65

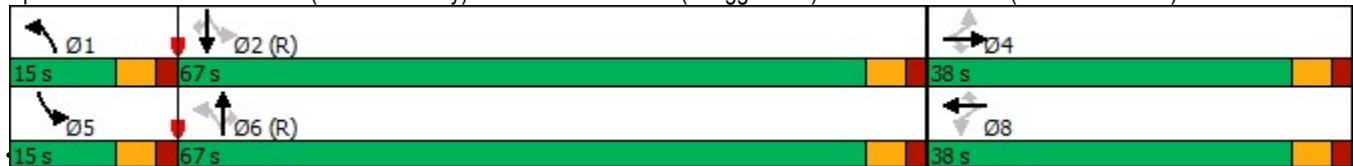

Control Type: Actuated-Coordinated

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 2: SR 61 (Villa Rica Hwy) & SR 120 Connector (Scoggins Rd)/SR 120 Connector (Hiram Sudie Rd)

HCM 6th Signalized Intersection Summary

2: SR 61 (Villa Rica Hwy) & SR 120 Connector (Scoggins Rd)/SR 120 Connector (Hiram Sibley Rd)

Intersection Summary

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 0 (0%), Referenced to phase 2:WBTL and 6:EBTL, Start of Green

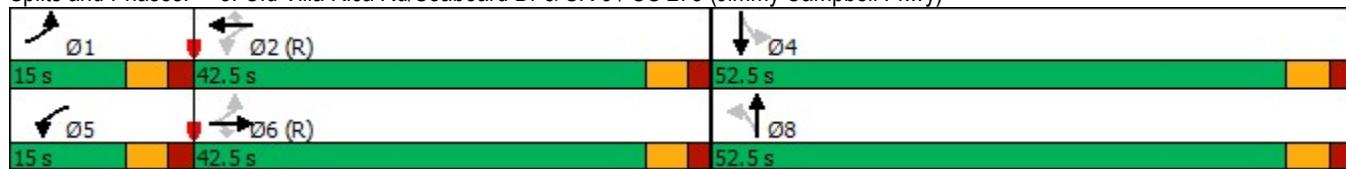

Natural Cycle: 135

Control Type: Actuated-Coordinated

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 8: Old Villa Rica Rd/Seaboard Dr & SR 6 / US 278 (Jimmy Campbell Pkwy)

HCM 6th Signalized Intersection Summary

Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 0 (0%), Referenced to phase 2:WBTL and 6:EBTL, Start of Green

Natural Cycle: 125

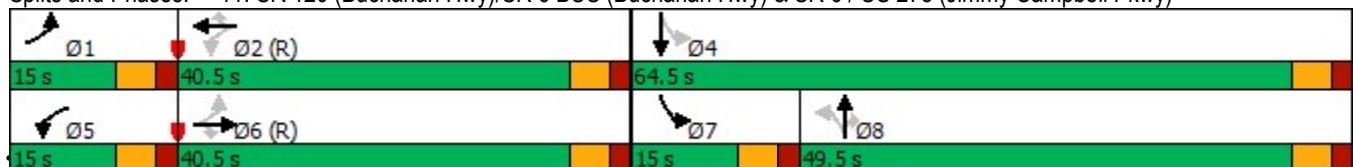

Control Type: Actuated-Coordinated

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 11: SR 120 (Buchanan Hwy)/SR 6 BUS (Buchanan Hwy) & SR 6 / US 278 (Jimmy Campbell Pkwy)

Intersection Summary

Cycle Length: 120

Actuated Cycle Length: 120

Offset: 0 (0%), Referenced to phase 2:SBTL and 6:NBTL, Start of Green

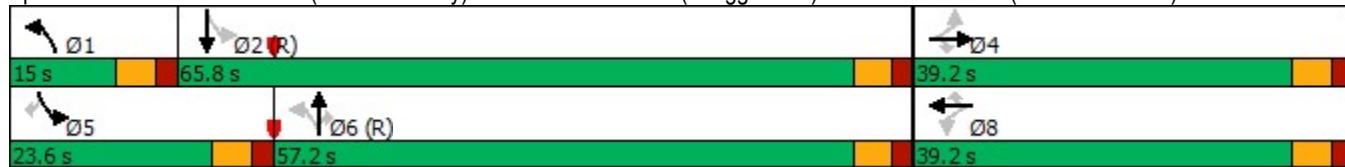

Natural Cycle: 75

Control Type: Actuated-Coordinated

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 2: SR 61 (Villa Rica Hwy) & SR 120 Connector (Scoggins Rd)/SR 120 Connector (Hiram Sudie Rd)

HCM 6th Signalized Intersection Summary

3b. Future PM - Improved

Intersection Summary

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 0 (0%), Referenced to phase 2:WBTL and 6:EBTL, Start of Green

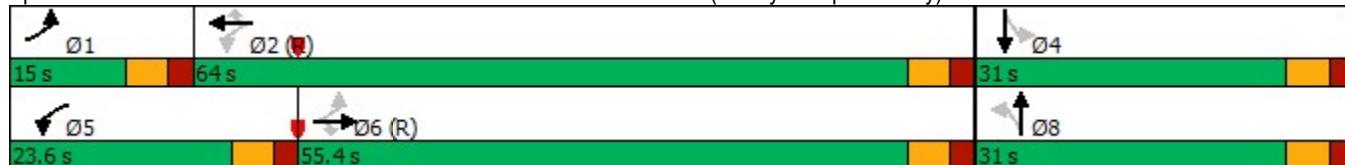

Natural Cycle: 90

Control Type: Actuated-Coordinated

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 8: Old Villa Rica Rd/Seaboard Dr & SR 6 / US 278 (Jimmy Campbell Pkwy)

HCM 6th Signalized Intersection Summary
