Approvals

Consult manufacturer for current industry approval information.

Environmental Considerations

Metal wall panels and roofing systems are the cladding materials of choice for "green" construction. SentryClad™ metal products are recyclable upon final disposal and these products are largely produced of recycled content. Call your sales representative to learn which products qualify to earn LEED points.

Physical/Chemical Properties

Test reports and additional product performance data are available upon request.

Fire Performance

Sheet metal roofing and wall panels are inherently fire resistant. UL assembly fire resistance ratings of 1,2 and 3 hours are available. Consult with N.B. Handy for technical support.

5.Storage / Installation

Store architectural metal roof panels properly and adequately to protect from damage on the jobsite or in the warehouse. Protect flat sheet, roofing and wall panels from adverse job conditions, such as moisture, prior to installation.

Protect flat sheet roofing and wall panels from other trades after installation. Factory applied protective strippable film must be removed immediately upon material installation. Accessories and trim components should be factory fabricated or field formed in finish and metal thickness, same as the panels, except as otherwise noted on the drawings.

Verify that the substrate layout complies with the shop-drawing layout. Do not start work until all unsatisfactory conditions have been corrected.

Methods

Flashings should be shop fabricated from material that is the same thickness and finish as the panels to which they are attached. Where practical, flashings should be furnished in 10' (3 m) lengths. Exposed flashings should be lapped 6" (152mm). Use premolded polyethylene or EPDM closures to match the profile of the panel in lengths as supplied by the manufacturer. Caulking should be polyether or polyurethane where it is exposed to the weather and there is no thermal movement. Caulking should be non-skinning, nonhardening gun grade butyl sealant or butyl sealant tape with a minimum thickness of 3/32" where it is concealed and where thermal movement must be accommodated. All caulking or sealing should be applied in a neat manner with excess caulking or sealant removed from exposed surfaces. All architectural metal roofing and wall panel systems should be installed plumb, straight and true to adjacent work. Polyethylene or EPDM profile closures should be provided and used as needed. No perforations should be made in roofing, wall panels or flashings by fasteners except as shown on the drawings. Complete installation recommendations are available from the manufacturer.

Precautions

Observe all industry recognized jobsite safety practices. Oil Canning is a characteristic of light gauge architectural metals and is NOT a flaw and therefore not considered a cause for rejection.

Building Codes

Current data on building code requirements and product compliance may be obtained from N. B. Handy Technical Services. Installation must comply with the requirements of the authority having jurisdiction (code officials).

6. Availability and Cost

Availability:

SentriClad™ products are sold through our network of NB Handy service centers in optimized and strategic locations throughout the Mid-Atlantic and Southeastern United States.

Cost:

Budget installed cost information and life cycle costing information may be obtained from NB Handy.

7. Warranty

The SentriClad™ paint finish has a manufacturer's standard 30-year warranty. See full warranty details for specifications.

8. Maintenance

Architectural metal roof, wall panel and flashing systems offer very low maintenance. Periodic inspection to ensure panel, sealant and flashing integrity is advisable. Depending on local environmental conditions, occasional pressure washing using a mild detergent solution can be effective in removing dust and dirt.

9. Technical Services

A staff of factory trained authorized and credentialed service personnel offers design assistance and technical support. For technical assistance, contact N.B. Handy.

Your company's certification will last for a period of five (5) years from the date on this certification letter. Certification entitles your firm to be included in SBO plans submitted by contractors bidding on City of Atlanta projects.

As a certified firm, you are required to notify the Office of Contract Compliance if the ownership or control of your firm changes or if your office relocates outside of the twenty-county Atlanta Regional Development Commission (ARDC) area. Failure to provide this notification, in writing, may result in your firm being removed from the Small Business Opportunity Register.

Additionally, your company is required to submit a full EBO/SBO application six (6) weeks prior to your expiration date via the City of Atlanta's Supplier Diversity Management System (SDMS).

We welcome you to the City of Atlanta's Small Business Opportunity Program.

Sincerely,
DocuSigned by:
