APPENDIX C.2 - SID NO. 202605-02 DISTRICT MAP, PLAN DRAWINGS AND ASSESSMENT TABLE	

1.01 PROJECT BACKGROUND

This Special Improvement Districts (SID) 202605-01 and 202605-02 are proposed to be constructed as part of the 2026 Utility and Street Improvement Project identified as City of Dickinson Project Number 202605. The project is included in the City's 2026 budget.

1.02 PROPOSED PROJECT IMPROVEMENTS AND PROJECT LIMITS

The 2026 Improvement Project will be constructed on the following streets:

- SE Area (202605-01)
 - 1st Street SE – South Main to 5th Avenue SE
 - 2nd Street SE – 2nd Avenue SE to 150 Feet East of 5th Avenue SE
 - 1st Avenue SE – East Broadway to 2nd Street SE
 - 2nd Avenue SE – East Broadway to 2nd Street SE
 - 3rd Avenue SE – East Broadway to 2nd Street SE
 - 4th Avenue SE – East Broadway to Alley South of 2nd Street SE
 - 5th Avenue SE – East Broadway to 2nd Street SE
- NE Area (202605-02)
 - 3rd Avenue E – 2nd Street E to 7th Street E
 - 4th Street E – 3rd Avenue E to 4th Avenue E

In summary, the project will include watermain replacements in areas where existing pipes are Asbestos Cement or Cast Iron, along with lead service line replacements to improve water quality and system reliability. Sewer spot repairs will be completed to address localized defects and prepare the system for future sewer relining by the city. In addition, the project will include concrete improvements such as curb and gutter, sidewalk, and ADA-compliant ramps, as well as an asphalt mill and overlay or full pavement reconstructs to the roadway surface. Together, these upgrades will enhance utility performance, extend infrastructure life, and improve safety and accessibility for residents.

1.03 PROJECT JUSTIFICATION

The proposed SID will replace deteriorating driveways and sidewalks as well as correct deficiencies on pedestrian facilities where practical. The street maintenance portion of the project will correct poor drainage along curb and gutter sections that have settled and deteriorated and upgrade pavement conditions.

Creating the SID is in accordance with the City's Special Assessment Policy (see Appendix A). The policy was approved (Resolution 39-2019) by the City Commission on December 17, 2019. The Policy gives the City authority to assess for constructing sidewalks, curb and gutter, and driveway aprons in conjunction with street maintenance projects. The city has opted only to use a SID for sidewalk and driveway repairs and replacement. The costs associated with repair and replacement of curb, gutter and accessibility ramps will be funded under the pavement maintenance budget.

1.03.1 WATER SYSTEM IMPROVEMENTS

Publicly operated water systems provide numerous advantages for urban communities. A municipal water treatment and distribution network ensures a consistent and reliable supply of

potable water for residential, commercial, and industrial users, supporting the diverse needs of the population. Because the system is centrally maintained by the City, inspections, repairs, and necessary upgrades are routinely performed to protect water quality and reduce the financial and maintenance burden on individual property owners. These systems are also designed to meet fluctuating demand and accommodate future growth, enhancing public health, fire protection, and overall community resilience. As a result, municipal water infrastructure contributes to higher property values and supports long-term economic development by ensuring dependable access to clean water.

In contrast, individual wells are generally impractical in urban settings. They require substantial space, offer variable water quality and quantity based on groundwater conditions, and often need additional filtration to meet drinking water standards. All testing, maintenance, and repair responsibilities fall to the property owner, including pump maintenance and potential system failures. Over a 25-year period, owning and maintaining a well system can cost anywhere from \$30,000 to \$100,000 or more, depending on site conditions and required repairs. While individual wells can serve as a cost benchmark, they are not a viable alternative within city limits.

A failed water main system can also cause extensive property damage, including structural impacts and loss of personal belongings. It is important to note that the water distribution improvements within the Special Improvement District are **not** being assessed to property owners, further increasing the value and overall benefit to those who receive service from the upgraded municipal system

1.03.2 ROADWAY PAVING AND INCIDENTAL IMPROVEMENTS

Roadway pavement is critical for maintaining safe and efficient transportation within urban communities. A properly maintained paved road network enhances both vehicle and pedestrian safety by providing a smooth, reliable surface that minimizes accidents and reduces vehicle wear associated with uneven or unpaved roads. Paved streets also support better traffic flow, lowering congestion and travel time for residents and businesses and contributing to a higher overall quality of life. In addition, paved roads are more durable and resilient to weather, preventing issues such as erosion, dust, and water pooling that commonly degrade unpaved surfaces and lead to frequent, costly repairs.

Although unpaved roads may have lower initial installation costs, they are not practical in urban settings due to their high long-term maintenance needs, vulnerability to weather, and inability to withstand heavy traffic. These roads require constant grading, deteriorate quickly in adverse conditions, and generate dust, erosion, and potholes—factors that increase maintenance costs and negatively affect vehicle condition, property values, and public safety. Unpaved roads also do not meet International Fire Code requirements in urban areas, making them an unsuitable alternative. While not viable within city limits, they provide a baseline comparison for evaluating the costs and benefits of paved roadway improvements in urban improvement districts.

Unpaved roads require significant ongoing maintenance to keep them functional. Over a 25-year period, the costs of maintaining an unpaved roadway include regular grading, dust control, erosion management, and resurfacing. Below is a breakdown of key expenses:

- Initial Installation Costs
- Routine Maintenance
 - Grading
 - Dust Control
 - Resurfacing
- Vehicle Damage and Safety Implications
- Additional costs to consider are related to delay time to the average use

The capital costs of a typical local roadway system is between \$4,500,000 and \$5,500,000 per mile.

Pavement preservation is a proactive approach that involves a series of low-cost, preventative maintenance treatments aimed at protecting our roadway network, extending pavement life, and meeting the needs of our citizens. While no pavement lasts forever, the timely application of these treatments can significantly extend the lifespan of the pavement, resulting in substantial cost savings.

The following pavement rehabilitation strategy is from the City of Dickinson's *2023 Pavement Management Report (MDS Technologies, Inc., February 1, 2024)*:

8 Rehabilitation Programs and Budget Analysis

Effective management of a pavement network involves understanding how pavements deteriorate over time and applying appropriate maintenance and rehabilitation treatments at critical times in the life of a pavement to minimize the long term cost of maintaining the network at a desirable condition level. The concept of pavement management is illustrated in Figure 4 below.

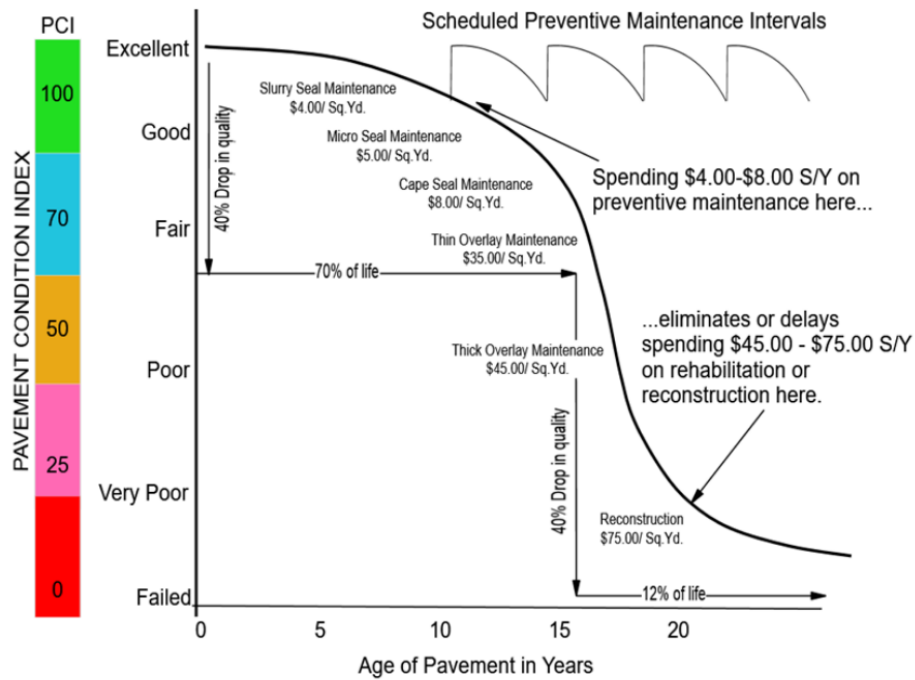

Figure 4: Pavement Management Concept and Effect of Timely Maintenance

Figure 4 shows that pavements typically do not deteriorate linearly. A pavement may experience only a 40 percent drop in quality over the first 70 percent of its life. During this time the life of a pavement may be extended significantly through the periodic application of relatively low cost maintenance treatments. This is represented by the “shark-fin” shaped curve in the upper-right of the figure.

A failed roadway system not only results in costly public repairs but also creates indirect expenses for road users, including increased vehicle wear, higher fuel consumption, and more frequent maintenance needs. Timely pavement preservation projects help maintain smoother, more reliable surfaces, reducing these additional costs for adjacent landowners. While the pavement within the Special Improvement District existed prior to this project, improvements are necessary due to required water system upgrades and significant deterioration of the existing roadway. Importantly, the asphalt surface costs within the Special Improvement District are **not** being assessed to property owners, further enhancing the overall benefit to those within the district. Per City of Dickinson policy, the only roadway-related assessment applied to landowners in special improvement districts is for sidewalk and curb-and-gutter maintenance; however curb and gutter maintenance is **not** being assessed. Historically, this portion of work in the City’s Road Maintenance projects has accounted for approximately 15% to 40% of the total project cost within special improvement districts

1.03.3 SANITARY SEWER IMPROVEMENTS

The project will include targeted sewer main spot repairs to address isolated sections of deteriorated or damaged sewer pipe within the project area. These repairs are necessary to prevent blockages, reduce inflow and infiltration, and ensure reliable sewer service for nearby residents. Completing these spot repairs will help stabilize the system and extend the life of the existing infrastructure, allowing the city to efficiently plan for future comprehensive sewer relining. By addressing the most critical issues in advance, the City can minimize disruptions, improve service performance, and ultimately reduce long-term maintenance costs for the community.

1.04 SCHEDULE AND OPINION OF COST

Construction is scheduled for summer of 2026, with the bid opening anticipated for February 2026. The preliminary opinion of construction cost for the utility and street improvement portion of the project that will be included in the Special Improvement District is shown in Appendix B while specific parcel assessments for the SID are shown in Appendices C.1 and C.2.

1.05 SID MAPS AND ESTIMATED SPECIAL ASSESSMENTS

The proposed SID boundary for each district is shown in Appendices C.1 and C.2, along with detailed information for each district. Appendices C.1 and C.2 include an overall layout identifying the related subdivisions and adjacent streets, as well as preliminary plan-view drawings illustrating the proposed improvements for each parcel based on field observations or anticipated areas of utility improvements. Preliminary SID assessment tables summarizing the improvements and estimated costs for each parcel are also provided in Appendices C.1 and C.2.

APPENDIX A
CITY OF DICKINSON SPECIAL ASSESSMENT POLICY

RESOLUTION NO. 39 - 2019

A RESOLUTION DECLARING A SPECIAL ASSESSMENT POLICY FOR COSTS FOR SIDEWALKS, CURB AND GUTTER IMPROVEMENTS

WHEREAS, the City of Dickinson intends to perform routine maintenance projects on asphalt and concrete streets, and

WHEREAS, the City of Dickinson has a limited amount of funding available to perform maintenance projects, and

WHEREAS the City of Dickinson has the legal authority to assess costs for sidewalks and curb and gutter improvements to properties within the City Of Dickinson pursuant to N.D.C.C. Section 40-31-06 and Municipal Code Section 33.04.180.

NOW, THEREFORE, it is hereby resolved by the Board of City Commissioners, as follows:

1. There is hereby created a special assessment policy for street maintenance projects.
2. Sidewalk and curb and gutter improvements made in conjunction with the street maintenance projects will be assessed to the adjacent landowners except in the following conditions:
 - a. On corner lots, through the entirety of the radius around the corner.
 - b. Where otherwise satisfactory curb and gutter or sidewalk need to be replaced because of work being done on the street project, including lighting and signing.
 - c. Where curb and gutter or sidewalk about the back lot line of a property
 - d. Where at the discretion of the City Engineer, sidewalk installation is not feasible.
3. Of the eligible costs in Section 2, one hundred percent (100%) will be assessed to the benefitting properties.
4. The costs of assessments shall be paid by the benefitting properties over a ten (10) year term at a rate of 1.5% over the then current market interest rate at the time of construction.

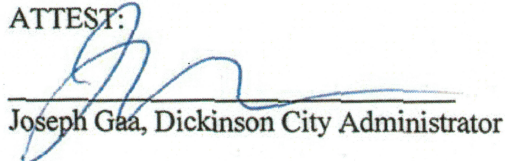

NOW, THEREFORE, BE IT RESOLVED that the Board of City Commissioners of the City of Dickinson, North Dakota creates a special assessment policy for street maintenance projects.

Dated this 17th day of December 2019.

Scott Decker, President
Board of City Commissioners

ATTEST:

Joseph Gaa, Dickinson City Administrator
