Hello Bonny,

Thank you for taking a couple minutes today to discuss the revised estimate for refinishing the exterior stain at the office building of the Days of '76 Campground. The new estimate includes Media-blasting the exterior to bring the logs back to a more natural/new look for the following reasons:

- Previous stain jobs have trapped dirt and debris between layers of stain and cannot be removed without the blasting procedure.
- Over time, the logs themselves have become discolored on various parts of the building. An example would be the lower back side of the building (along Crescent Street) has become pitted and discolored from snow being plowed against the building. The media-blast will remove the pitting and discoloration, allowing the new stain to provide a better layer of protection for the historic logs.

All-in-all, the building will be better preserved with the added maintenance of media-blasting, in addition to the stain. Please reach out with any additional questions.

Thank you,

Chris Roberts
