

The show has their own electrical box that needs to plug into 220v 50 amp power. The concessions use this box for power. The Moon Bounce & the Show LED lights and music can be plugged into a nearby wall outlet. The Globe would be the same as they alternate the connection. They have extension cords that can be used.

The Moon Bounce is only connected before the show and at intermission. The one light on the top of the Globe is plugged in for only about 5 minutes just for the act.
