

Agenda topics for City council

1. Pedestrian crossing at the intersection of Wiley Road and Blue Star Highway. Due to the increase in traffic a push button flashing signal should be installed for pedestrian safety.
2. Harbor Lake Drive is a private road in name only. There are twenty-one residents that access the road. The eleven units at the end of the road are subsidized housing. The delivery truck traffic and the Inter Urban use of the road create excessive wear on the road. There are dead trees that need to be removed before they fall on the road and prevent emergency vehicle access. Brush and tree trimming are necessary for road safety.
3. "The current Michigan deer die-offs are caused by Epizootic Hemorrhagic Disease (EHD), a viral illness spread by biting midges (Culicoides) whose larvae develop in stagnant water or moist water, including pond edges and swamps". This is a quote from the DNR information page. There is a stagnant body of water that borders the nursing home and HHI properties and passes under the road to the to a much larger pond. Who is responsible for the pond and culvert maintenance? This is a public health issue and an emergency access issue. There were dead deer floating in the larger pond, and on the edge of the Hidden Waters Association property. The DNR was contacted, and they said they would not remove deer on private property. Is there an agency that can be contacted for removal?
