

BRINGING LIVE ALIVE

Fire Safety Plan

In the event of an emergency during the Shinedown show, Pyrotek Special Effects, Inc, the Operator, Terry Park, along with the help of promoter and building will implement an emergency plan. All Equipment (see effects package) is equipped with Emergency Stop (E-stop) control systems which supply all of the main power to the control systems. The E-stop control box is equipped with a main on/off key switch and a red mushroom shaped emergency-stop push button that when depressed disables the entire electrical system (it removes all electrical power from the system and components). The E-stop control box will be at arm's length of the operator, Terry Park, at all times. The E-Stop will terminate power in less than one second. The technicians onsite will contain or extinguish the fire with fire extinguishers. In the event that the effect cannot be immediately placed under control, emergency personnel will be called in and the promoter and building will ensure the safety of the audience. All personnel will have access to a telephone where 911 can be called.

Zone Shut Down

Firing locations will not be accessible to anyone but the pyrotechnic crew and will be equipped with fire extinguishers. Security for the building will limit access into the building, and specifically the firing area.

Fire Extinguishers

4 - Class 10-BC extinguishers and 2 - Pressurized water Class 2A extinguishers will be present on site. The Fire Extinguishers shall be placed on each side of the stage wings or as the Authority Having Jurisdiction sees fit.

Communication

Radios will be positioned in 2 key areas (including the lead technician). These radios will enable us to communicate any security breach or any other situation that may be deemed problematic enough to shut down sections of the show. The lead technician will have direct line of site to all positions as well as radio contact.

Thank you,
