- D. Peak Hour Traffic Calculations
- E. Level of Service Reports

1. Introduction

APEX Consulting Engineers, LLC prepared this Level 2 Traffic Impact Study (Study) for the proposed Mews Subdivision (Project), located at 1138 18 1/2 Road, Fruita, CO, accessing K 4/10 Road on the north and south side of the roadway. The Project will construct 50 low-rise multifamily homes. The following sections describe the Project, traffic volumes, auxiliary turn lane assessments, access spacing, and sight distance evaluation for this intersection.

2. Project Location and Description

As shown in Figure 1, the proposed Project will be located on the north side of K 4/10 Road in the northeastern area of Fruita, CO. The Project is expected to be completed no later than 2023.

Figure 1 - Site Location Map

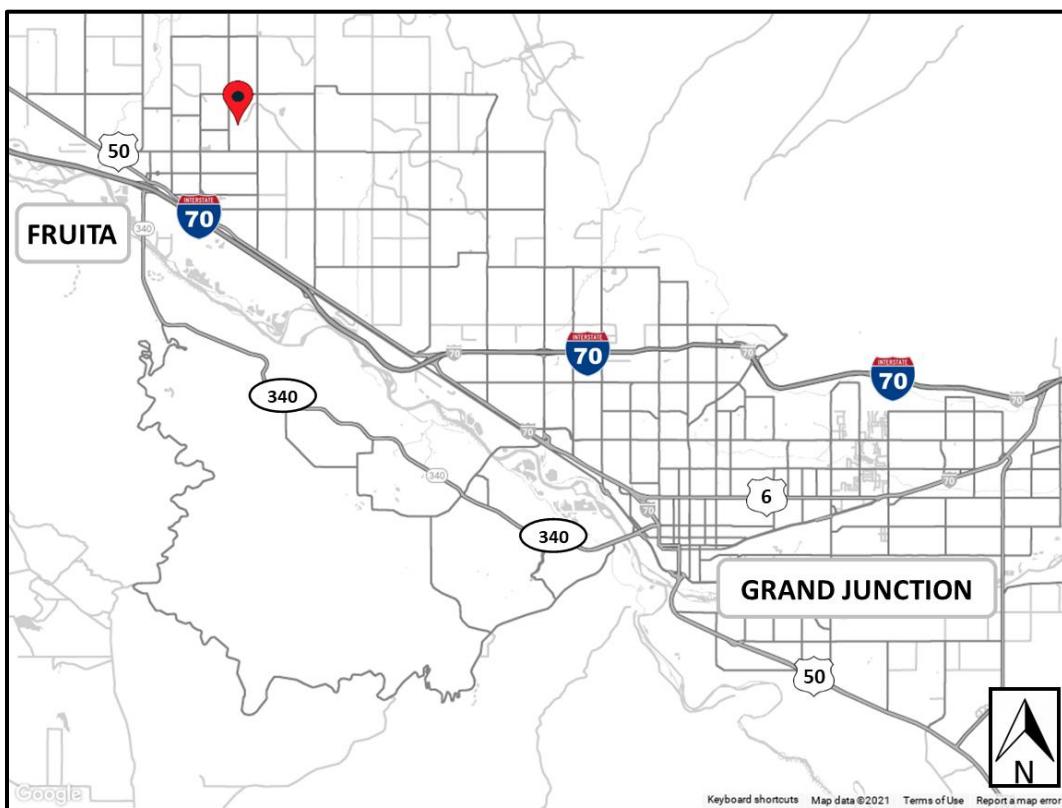

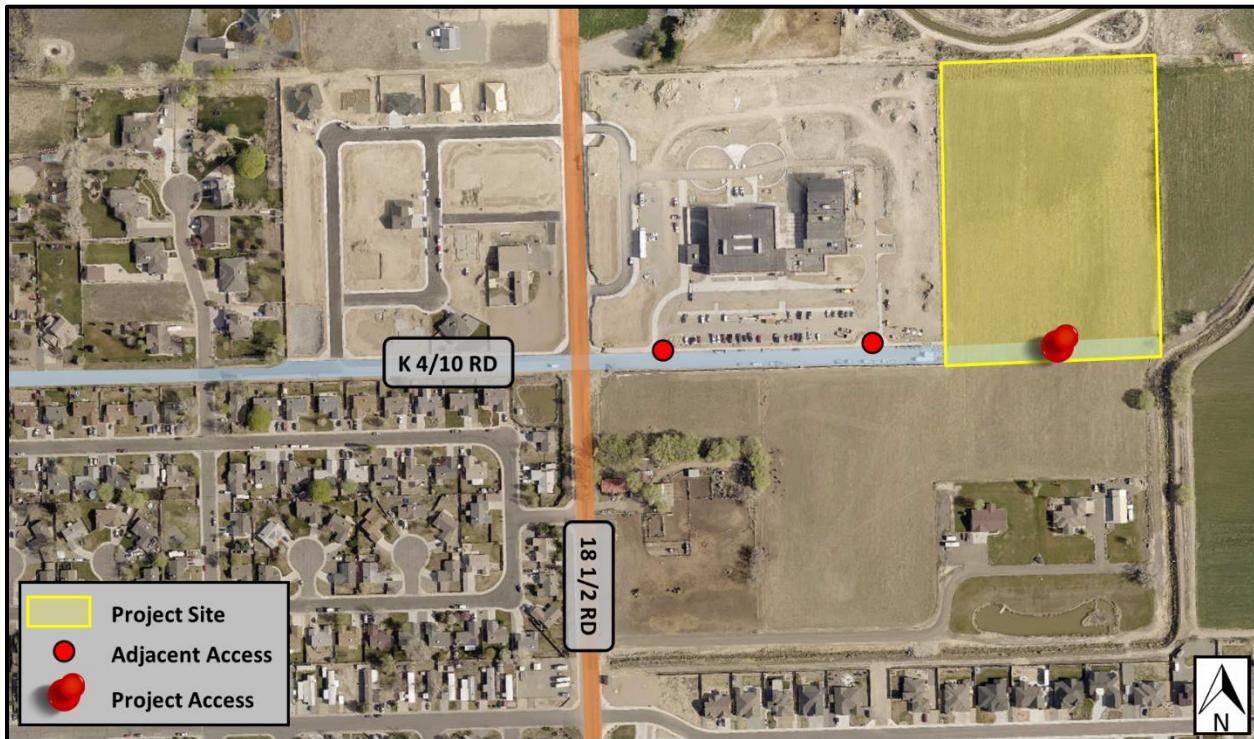

Figure 2 shows the adjacent access points in relation to the project access.

Figure 2 – Project Site Access Locations and Adjacent Access Points

3. Trip Generation & Distribution

3.1 Trip Generation

Land Use Code 220, Residential (Low-Rise Multifamily Housing), from the ITE Trip Generation Manual 10th Edition, was used in trip generation calculations. In all peak hour cases, the higher of “either peak hour of roadway” or “peak hour of generator” is used, providing a conservative assessment. In this case, peak hour of generator is used. Trip generation traffic calculations from the ITETripGen Web-based App are attached in Appendix A. Table 1 provides the Project peak hour traffic in vehicles per hour (VPH).

Table 1 – Project Peak Hour Traffic Volumes (VPH)

Period	AM	PM
Entry	8	20
Exit	22	14
TOTAL	30	34

Trips generated from the Fruita Elementary School Traffic Impact Study prepared by Kimley Horn will be added to the study intersections as counts were performed outside of the regular school session. The original study's trip generation for the elementary school is attached in Appendix B.

4. Trip Distribution & Assignment

4.1 Determination of Trip Distribution

Traffic counts at K Road and 18 1/2 Road (Intersection 2) are used to determine general Project trip distribution at K 4/10 Road and 18 1/2 Road (Intersection 1). All Project traffic is assumed to travel south or west at Intersection 1 as services are not located north of the subdivision.

The existing trip distribution to/from the east at Intersection 2 are used for the to/from the south distribution at Intersection 1.

The existing trip distribution to/from the west at Intersection 2 are used for the to/from the west distribution at Intersection 1.

The distribution at intersection 1 is listed below.

- 0% to/from the north in the AM.
- 57% to/from the west in the AM
- 43% to/from the south in the AM

and

- 0% to/from the north in the PM.
- 38% to/from the west in the PM
- 62% to/from the south in the PM

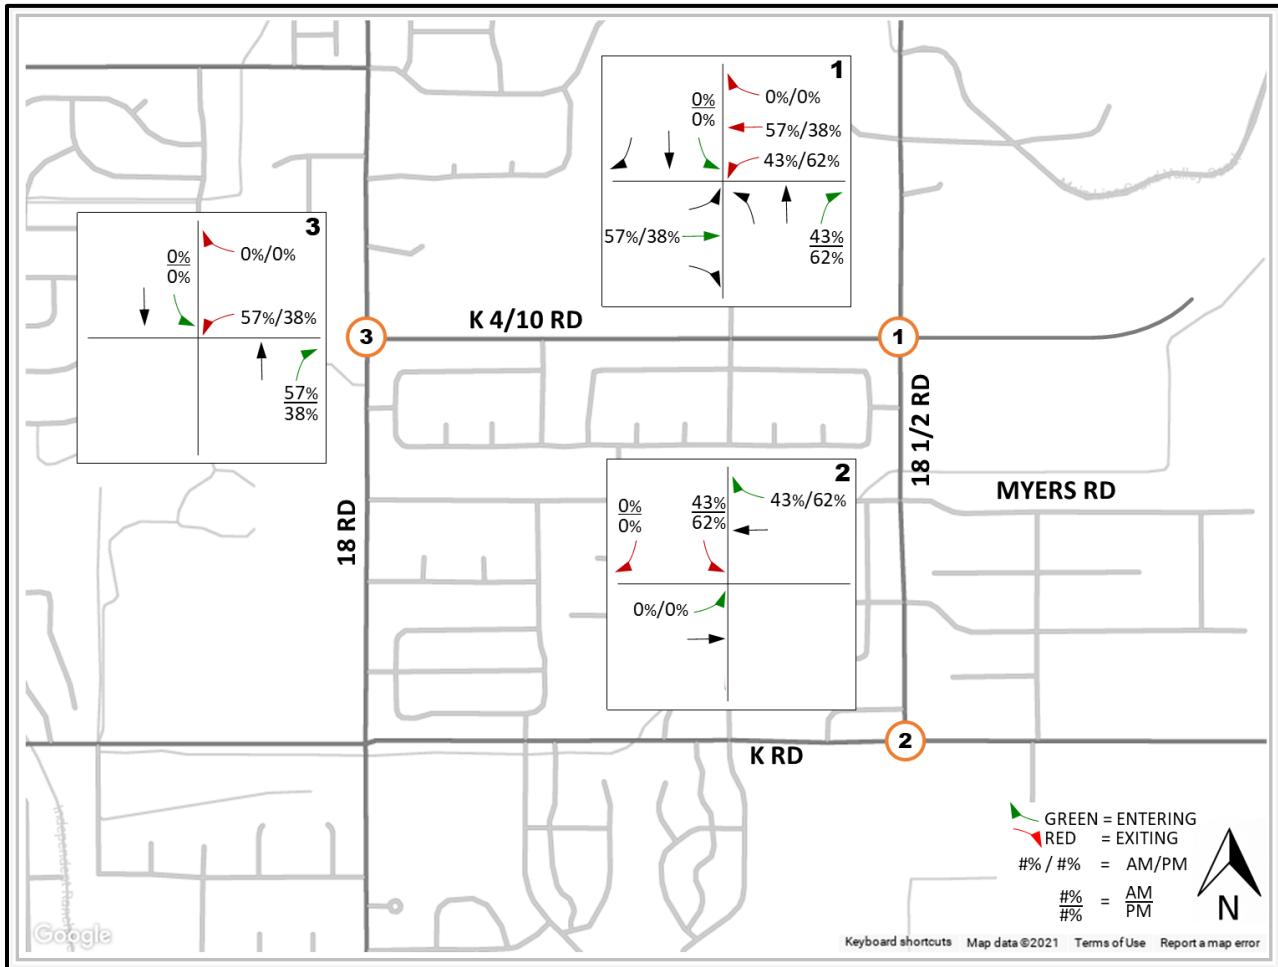

All Project traffic routed through Intersection 2 is assumed to travel to/from the east.

All Project traffic routed through Intersection 3 (18 Rd & K 4/10 Rd) is assumed to travel to/from the south.

The detailed Project trip distribution is shown in Figure 3.

Figure 3 – Project Trip Distribution

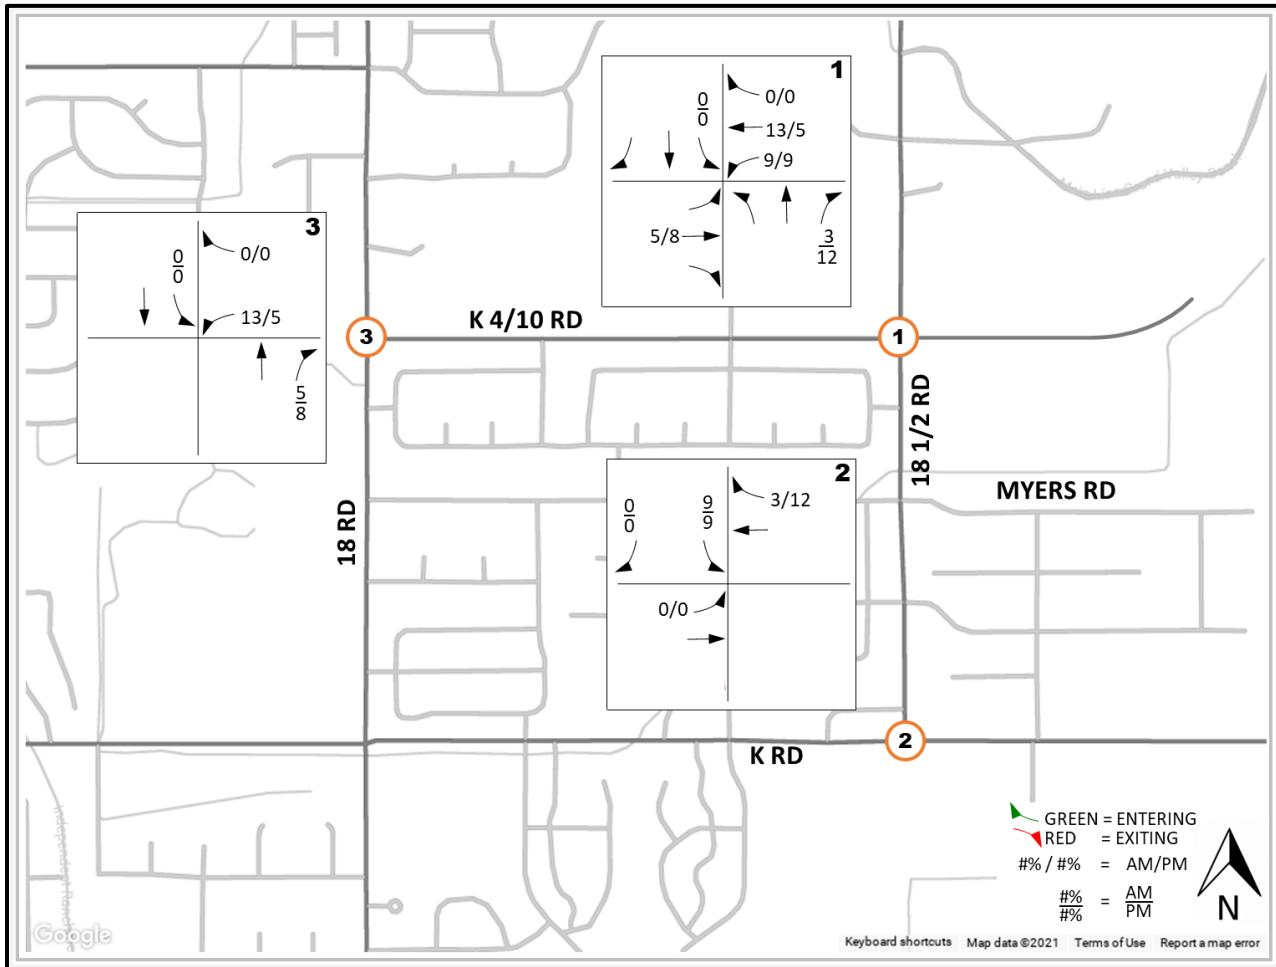

4.2 Assignment of Project Traffic

Project traffic determined from the trip generation calculation is assigned to the existing traffic network using the distributions from Figure 3. The resulting Project trip assignment is shown in Figure 4.

Figure 4 – Project Trip Assignment

5. Existing & Future Traffic Volumes

Peak hour intersection turning movement counts were conducted at the following intersections.

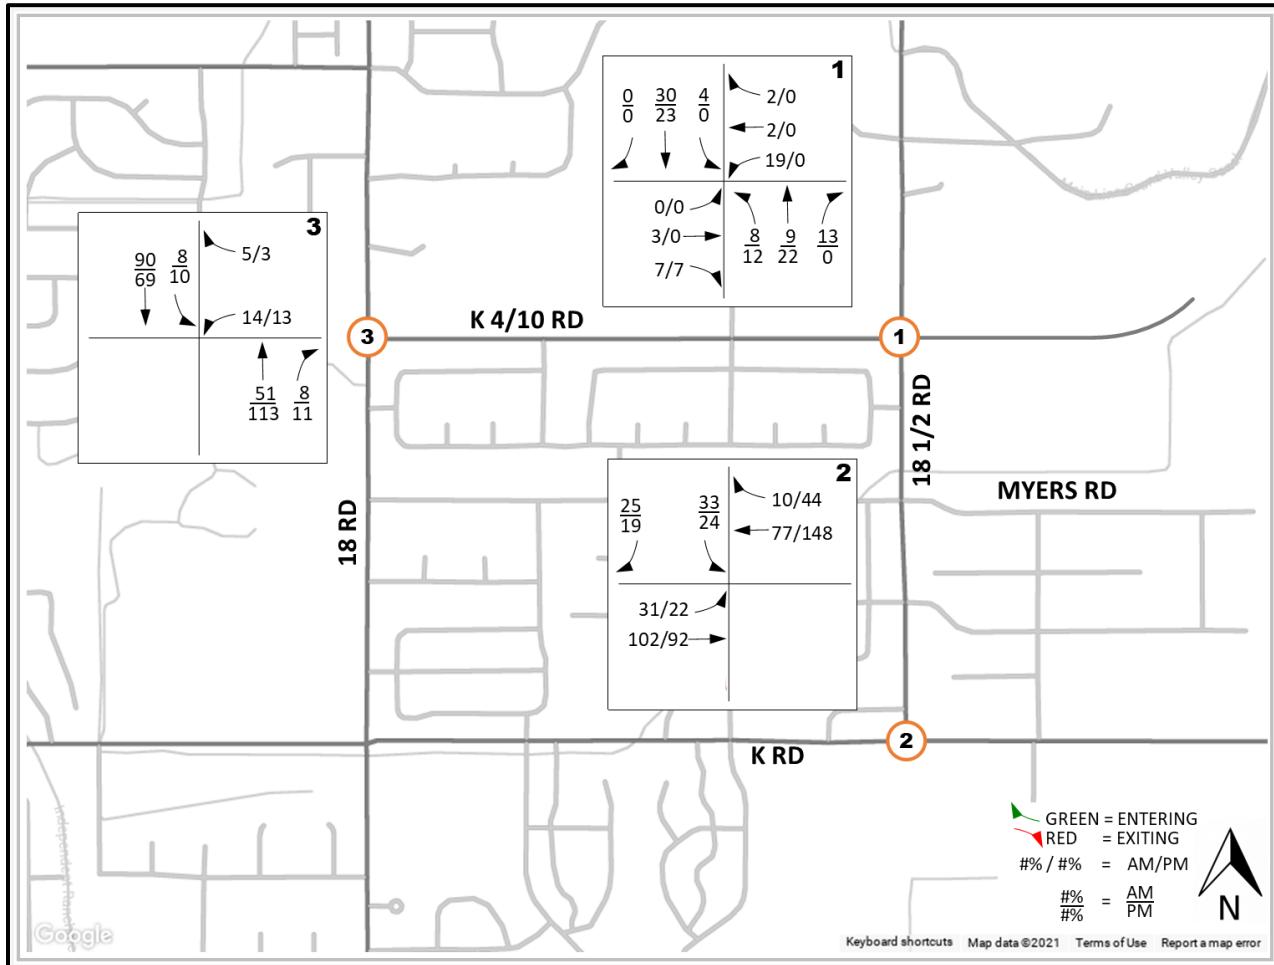

- K 4/10 Road & 18 1/2 Road (**Intersection 1** / June 15, 2021)
- K Road & 18 1/2 Road (**Intersection 2** / June 15, 2021)
- K 4/10 Road & 18 Road (**Intersection 3** / June 15, 2021)

Peak seasonal adjustment was not included since the roadways are in a mixed rural and residential area, lacking direct access to areas with seasonal activities.

The existing peak hour traffic is represented in Figure 5. Count summaries are included in Appendix C.

Figure 5 – Existing Peak Hour Traffic
 (From counts 6/15/2021)

6. Study Years Traffic Volumes

Future background traffic is determined in this section.

The study years are 2023 and 2043. The Grand Valley Metropolitan Planning Organization (GVMPO) provided traffic volumes from the Regional Travel Demand Model (RTDM), base 2018 + future 2045, and are the basis for the following growth factors. Note that the study model period uses 2019 instead of 2018 as directed by the GVMPO.

Table 2 – Road Segment Growth

Road	Segment	ADT		Period Growth Factor	Avg. Annual Growth Rate	2 - year growth factor (2021-2023)	22 - year growth factor (2021-2043)
		2019	2045				
18 Road	Both Sides	1,553	3,158	2.033	2.77	1.056	1.824
18 1/2 Road	N of K.4 Rd	122	1,318	10.803	9.59	1.201	7.498
	S of K.4 Rd	287	2,003	6.979	7.76	1.161	5.177
K Road	E of 18 1/2 Rd	2,539	1,896	0.747	-1.12	0.978	0.781
	W of 18 1/2 Rd	2,826	4,381	1.550	1.70	1.034	1.449

These growth factors were used to determine future peak hour background traffic volumes, as shown in the peak hour traffic calculations provided in Appendix D. Note, K Road has a negative annual growth rate due to the future construction of 18 1/2 Road south of K Road.

7. Study Period Volumes

Future background traffic includes the current land use traffic at the site and the through volumes with the growth factors applied to the current traffic volumes.

Total traffic volumes consist of future background traffic volumes plus Project trips to demonstrate the proposed use of the site. The following figures present background and total peak hour traffic for the peak hour study periods. Calculations are included in Appendix D.

Figure 6 – Background Peak Hour Future Traffic (Year 2023)

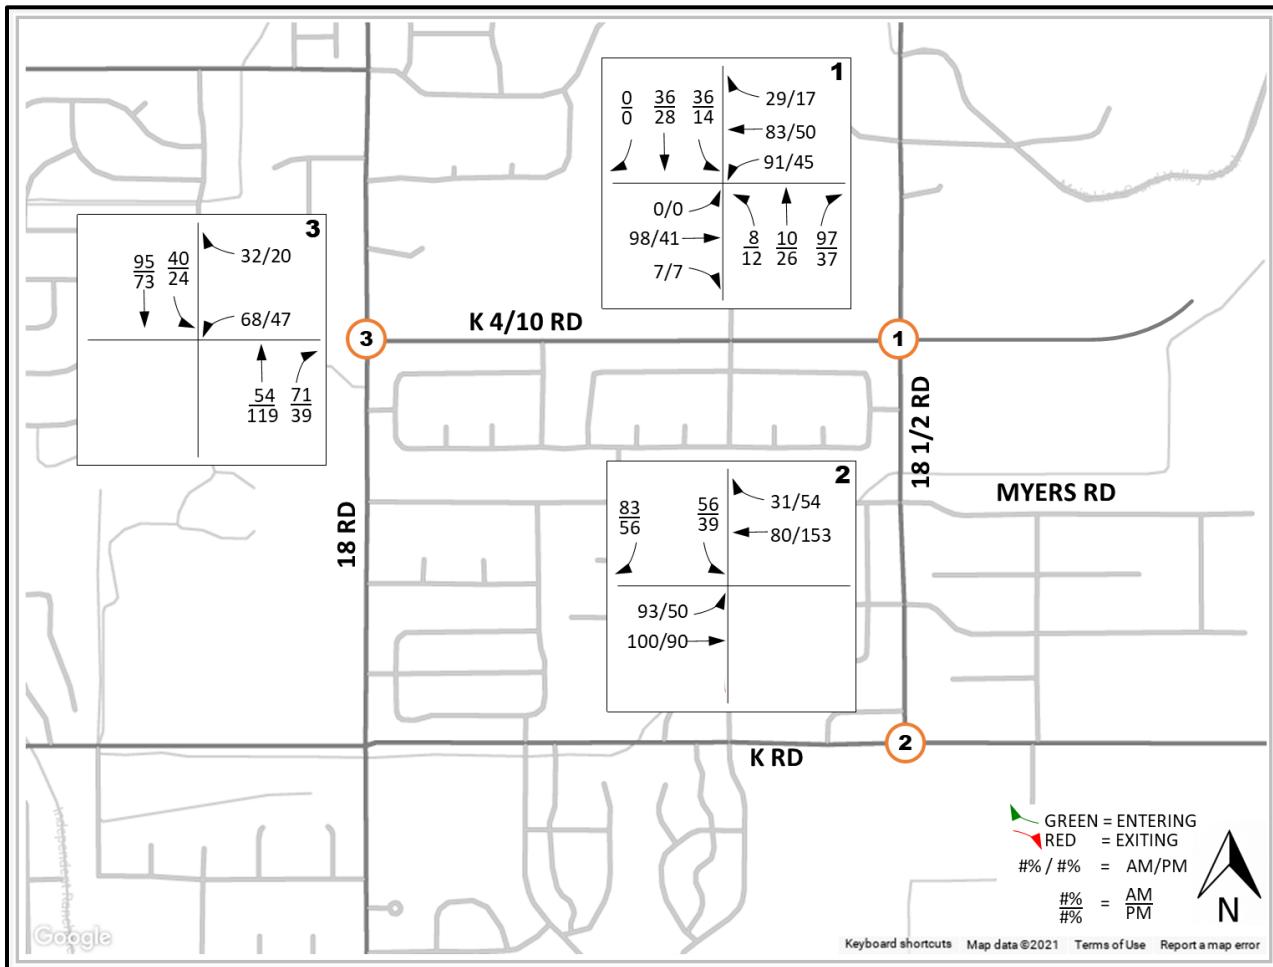

Figure 7 –Total Peak Hour Future Traffic (Year 2023)

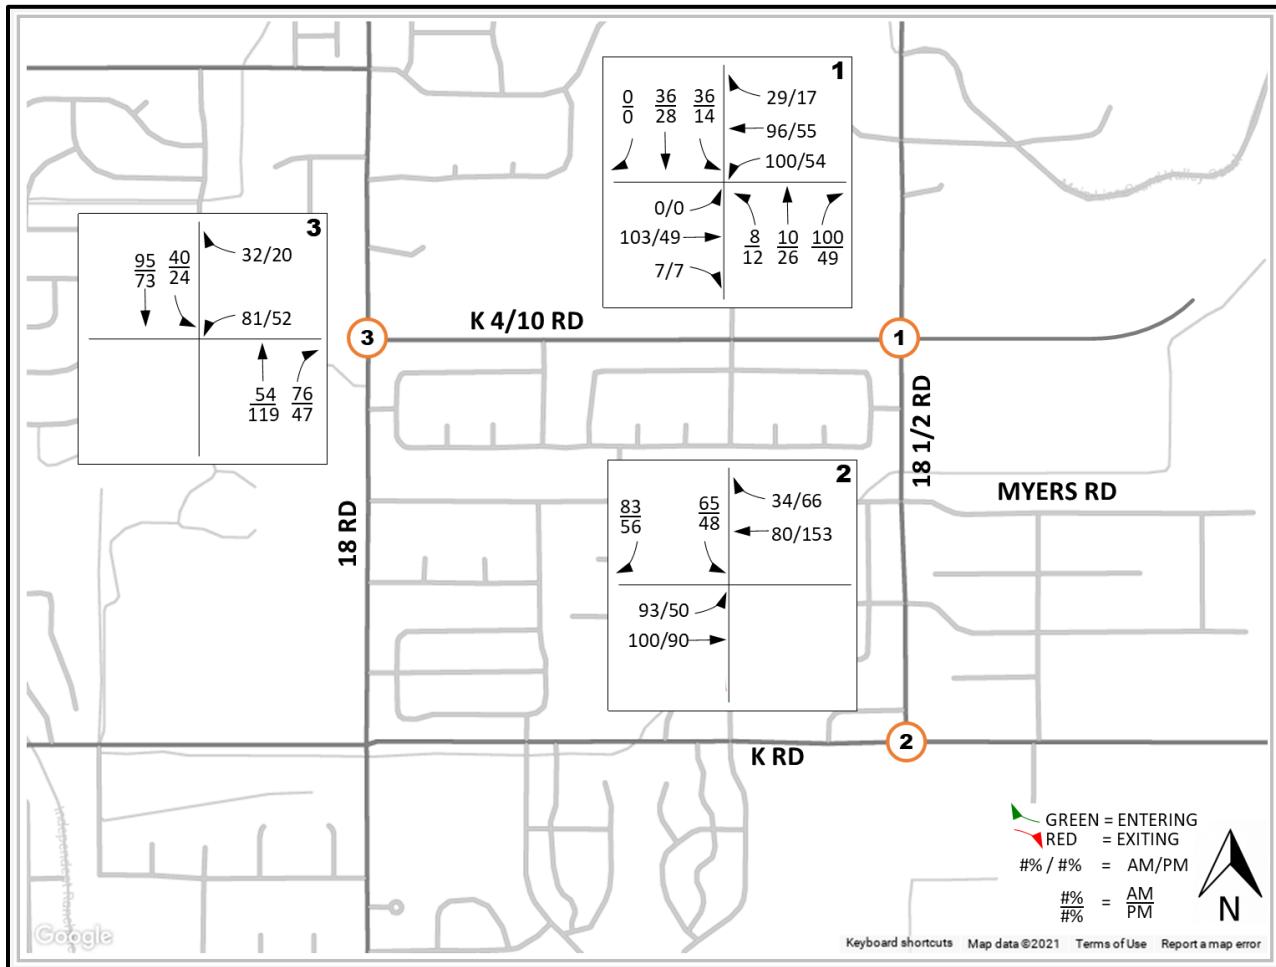

Figure 8 – Background Peak Hour Future Traffic (Year 2043)

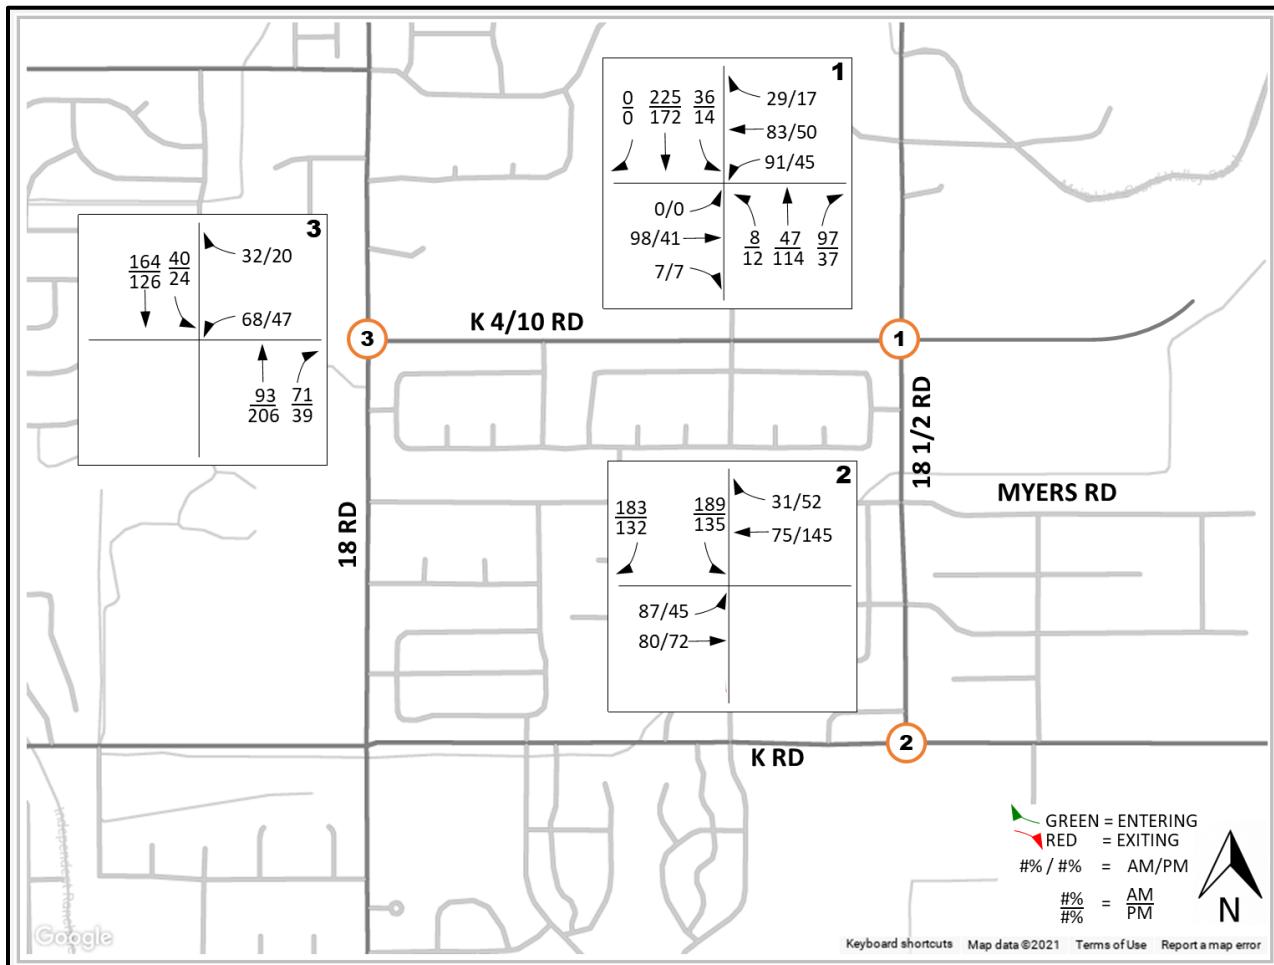

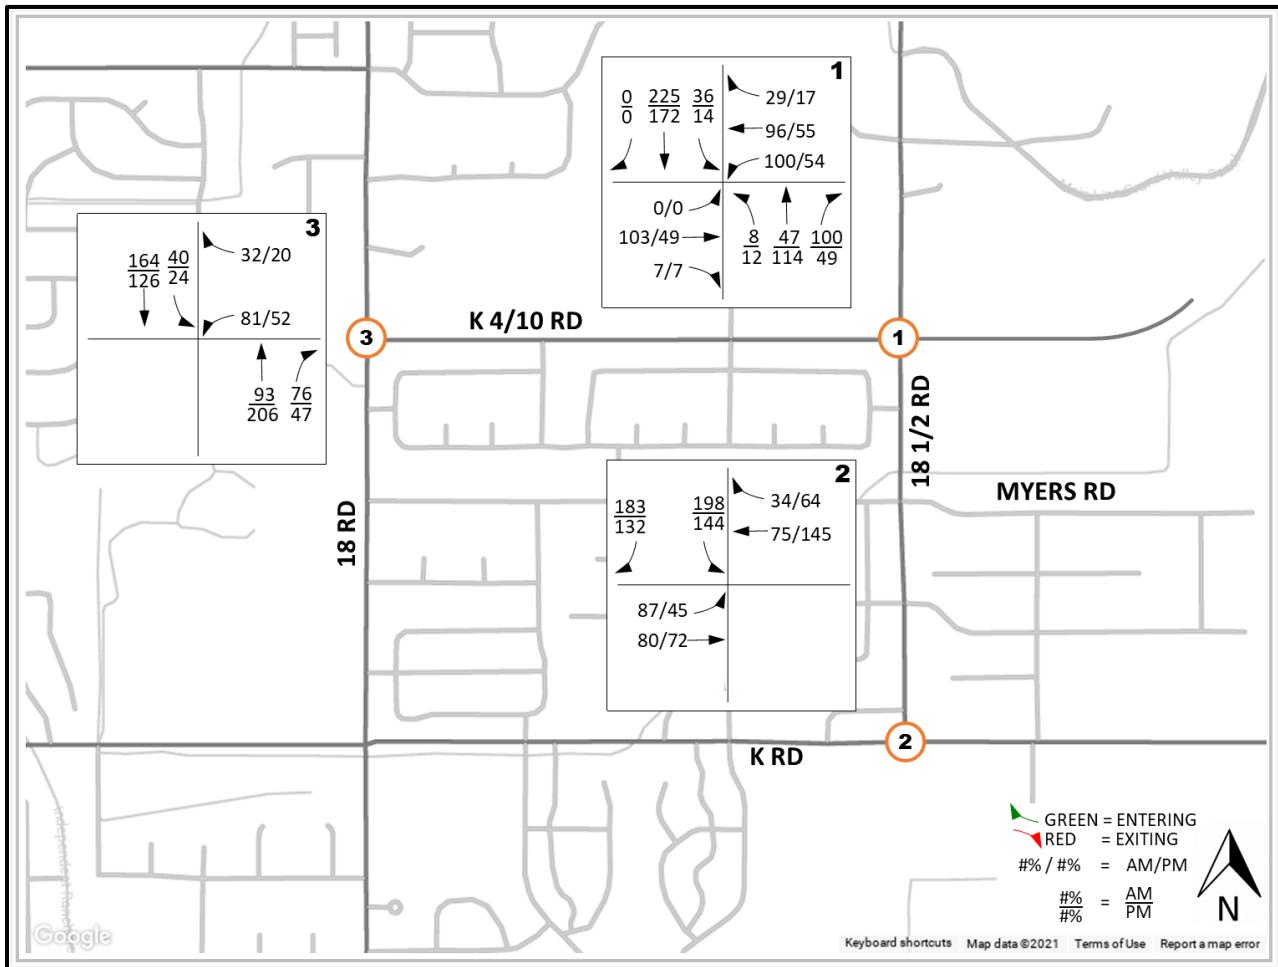

Figure 9 – Total Peak Hour Future Traffic (Year 2043)

8. Auxiliary Turn Lane Evaluation

The need for auxiliary lanes was based on the turn lane warrants listed in the Mesa County Transportation Engineering Design Standards (TEDS) based on total traffic volumes at the 20th year following Project completion (year 2043). The following table shows the data and criteria necessary to identify the need for exclusive right-turn and left-turn deceleration lanes at the intersections in the Study area based on speed limits of 35 mph.

Table 3 – Comparison of Turning Volumes to Turn Lane Requirements

Intersection	Year	Deceleration Movement	Speed Limit	Highest Period	Turning (vph)	Through Volumes (vph)		Threshold Turning Volumes	Required Threshold Conflicting	Auxiliary Lane Req'd			
						Direction	Conflicting						
1	K 4/10 Rd & 18 1/2 Rd	2023 Total	EB Right	35	No project traffic added to this movement

					PM	81	WB	32	40	32			
			SB Left	45	AM	76	NB	93	200 ¹	400 ¹			
					No project traffic added to this movement								

Notes:

1. Right turn lanes generally not required with through volumes less than 400 vph and right turns less than 200 vph.

Note the traffic data presented in the Kimley Horn study prepared for the school warranted turn lanes, though those results were not reported. Additional project traffic adds to the existing warranted condition.

9. Level of Service

Due to the high turning movement volume at Intersection 1, the Study includes level of service analysis to evaluate the quality of each intersection without the addition of auxiliary lanes. The traffic analysis was conducted using the methodologies outlined in the Transportation Research Board's Highway Capacity Manual, 2016 Edition. Synchro® 10 Planning & Analysis Software was used to determine traffic operation.

The results of the intersection operational analysis were used to assess the LOS experienced by drivers as the duration of delay a driver experiences at a given intersection. LOS A represents the most desirable conditions with free-flow movement of traffic and minimal delay to motorists. LOS F generally indicates severely congested conditions with excessive delays to motorists. Intermediate grades of B, C, D, and E reflect incremental increases in congestion.

The duration of delay is measured differently for signalized intersections as compared to unsignalized intersections. The LOS delay range for an unsignalized intersection is typically shorter than at a signalized intersection primarily because at a stop sign, the traveling public has an expectation to experience less delay than at a signal. In addition, studies have shown that at unsignalized intersections drivers tend to become impatient with long delays and may use inadequate and unsafe gaps in the traffic stream to make left turns or enter the major street. The following table provides the delay thresholds for signalized and unsignalized intersections.

Table 4 – Intersection Delay & LOS Thresholds

Level of Service (LOS)	Signalized Intersections (seconds/vehicle)	Unsignalized Intersection (seconds/vehicle)
A	0.0 – 10.0	0.0 – 10.0
B	10.1 – 20.0	10.1 – 15.0
C	20.1 – 35.0	15.1 – 25.0
D	35.1 – 55.0	25.1 – 35.0
E	55.1 – 80.0	35.1 – 50.0
F	Greater than 80.0	Greater than 50.0

Source: Transportation Research Board, Highway Capacity Manual, 2016 Edition

Traffic Operations Analysis Results

Peak hour LOS was computed within the Study area using Synchro's Highway Capacity Manual 2016 Methodology Module. Results are reported in Table 5 and calculations are included in Appendix E.

Table 5 – Intersection Operations Summary

Intersection E-W N-S		Period	Traffic Control	New Lane Geometry	2023		2043	
			<u>Unsignalized</u>	Intersection LOS	Background	Total	Background	Total
					A (8.2)	A (8.6)	A (7.4)	A (8.1)
1	K 4/10 Rd	18 1/2 Rd	AM	Eastbound	Stop	1 left-thru-right	B	B
				Westbound	Stop	1 left-thru-right	B	C
				Northbound	Free	1 left-thru-right	A	A

				Southbound	Free	1 left-thru-right	A	A
	Control Delay LOS & Delay (sec/veh)				B (10.3)	B (10.5)	B (12.7)	B (13.2)
2	K Rd	18 1/2 Rd	AM	Eastbound	Free	1 left, 1 thru	A	A
				Westbound	Free	1 thru-right	-	-
				Southbound	Stop	1 left-right	B	B
	Control Delay LOS & Delay (sec/veh)				B (10.5)	B (10.7)	B (13.8)	B (14.1)
	K Rd	18 1/2 Rd	PM	Eastbound	Free	1 left, 1 thru	A	A
				Westbound	Free	1 thru-right	-	-
				Southbound	Stop	1 left-right	B	B
	Control Delay LOS & Delay (sec/veh)				B (10.4)	B (10.6)	B (12.2)	B (12.5)
	K 4/10 Rd	18 Rd	AM	Eastbound	Free	1 left-right	B	B
				Westbound	Stop	1 left-right	B	B
3	K 4/10 Rd	18 Rd	PM	Northbound	Free	1 thru-right	-	-
				Southbound	Free	1 left-thru	A	A
	Control Delay LOS & Delay (sec/veh)				B (10.4)	B (10.6)	B (11.2)	B (11.4)
	K 4/10 Rd	18 Rd	PM	Eastbound	Free	1 left-right	B	B
				Westbound	Stop	1 left-right	B	B
				Northbound	Free	1 thru-right	-	-
				Southbound	Free	1 left-thru	A	A
	Control Delay LOS & Delay (sec/veh)				B (10.2)	B (10.3)	B (11.2)	B (11.3)

As seen in Table 5, Intersection 2 and 3 remain at a LOS B or better for all conditions. Intersection 1 has a 2023 LOS B or better and in the 2043 condition it drops to a LOS C. Note that the LOS will be a C even without the construction of the Project as seen in the Background 2043 column. This shows that the Project does not significantly impact the LOS of any Intersection within the Study.

Though turn lanes are warranted at all three intersections, Table 5 demonstrates the intersections function within acceptable levels without the addition of auxiliary lanes.

10. Intersection Sight Distance

The Project access will be located on a proposed extension of K 4/10 Road. Sight distance triangles will need to be dedicated through the right of way or tracts located on the site. Required sight distance for vehicles entering the roadway was obtained from Table 4.2 in the Mesa County Road Access Policy.

K 4/10 Road is a 2-lane roadway with a posted speed limit of 35 mph. The grades are less than 3%. The required sight distance is 390 feet and will be exceeded while looking west at the Project access. K 4/10 Road will have a dead end to the east of the Project access with no additional traffic entering K 4/10 Road. Sight distance requirements will be met when future development of the nearby area occurs.

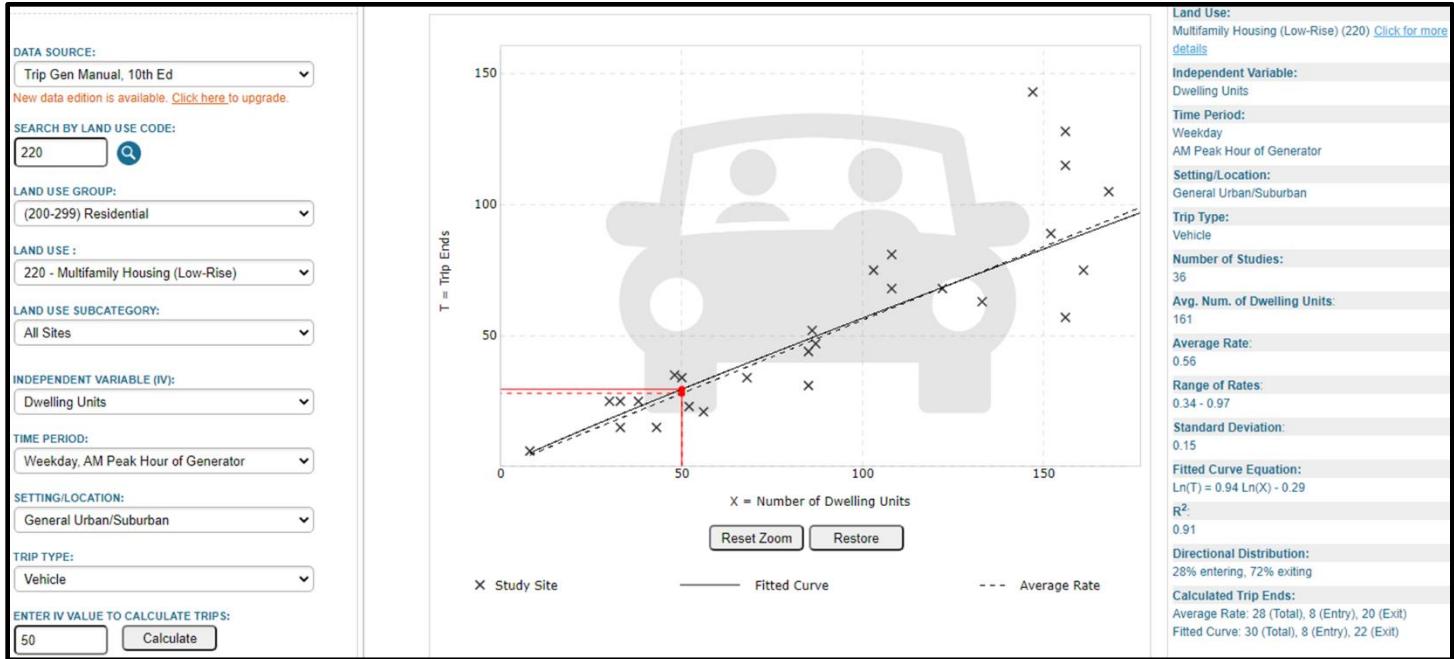

11. Summary and Recommendations

- The project results in an increase in traffic at the Project site from 0 vph peak hour to 30 vph AM peak hour and 34 vph PM peak hour.
- Auxiliary lanes are currently warranted (i.e., prior to the addition of Project traffic). However, the addition of auxiliary lanes is not necessary and will not significantly reduce the level of service of the intersections.
