Jodi,

The total area within the 200' radius, including the subject property at 1005 Holden St appears to be approximately 200,225 square feet or 4.597 acres. The opposed properties appear to be a combined approximate 22,063 square feet or 0.507 acres.

The percent of opposition would calculate to be approximately 11.02% in opposition within the 200' radius, including the area of the subject property in the calculation.

Let me know if you have any questions or if you need the calculation to not include the subject property.

Thanks,

Chris Hay, PE
