

OPERATIONAL PLAN FOR OUTSIDE STORAGE

The outside storage will be used to store excess empty metal racking. The proposed square footage for outside storage is 35,104 square feet. Excess empty metal racking will be stored outside. The maximum height of items stored outside would be 18 feet for our forklift masts but we will limit the height to 15 feet. The outside storage will be screened by the installation of fencing slats. A separate document addressing the required screening is attached.
