Request for Qualifications

It is always a joy to have the opportunity to bring art to a community. I was lucky enough to grow up in a region and environment that supports and values a rich diversity of art and artists. My youth was spent exploring the outdoors, taking machines apart to see how they worked, and visiting museums of all sorts. I participated in theatre and Odyssey of the Mind, which taught me teamwork and creative problem solving. These skills have become invaluable to me as I work with other artists, fabricators, clients, and community leaders. Everything that ever sparked my interest inspires my art, and everything interests me.

When I create custom artwork for a specific project, I consider the setting and feeling of the place and research the area, community, and history. From there, I brainstorm ideas and generate concepts and designs. Next, I figure out what the key components and elements will be so that I know how they need to be constructed. The construction must be carefully considered in order for the piece to stand the tests of time, different weather conditions, and interactions with people and wildlife. This includes not only material, but safety considerations as well. Drawings, sketches, and models are then created for submission. Upon approval, I order parts and materials, and either create or order custom components that I use to create and assemble the piece before its final transportation and installation on site. At times working solo, and sometimes in collaboration, I have been commissioned for well over than a dozen public art projects, some of which are described below, and have been successful at coming in at or under budget on all of them.

Nothing is more essential for the soul. Art can inspire a person to action, to think in ways maybe they hadn't before, or to feel an emotion. While museums are wonderful, I believe that access to, viewing, and interacting with art should not be limited to those with the opportunity to travel a long distance to do so. Hence, public displays of art and sculpture are a particular passion of mine. I'm always eager for the next.

## Work Sample Descriptions

### **(A) The Monarch**, Noyes Park, Fergus Falls, MN

Stainless steel, self-weathering steel, UV acrylic, hardware

6' x 6' x 8'

\$7,750

2017

Large stainless steel buffer fly with an eight foot wingspan resting on a self-weathering steel base. Wings are UV acrylic sandwiched between two layers of stainless steel.

### **(B) Wind Sculpture Model 101** (Whimsical Windmill) Elk River Powered of Nature

Elk River Public Library Grounds, Elk River, MN

Self-weathering steel, steel, stainless steel, galvanized steel, powder coating, bearings, gearbox, hardware

42" x 84" x 61"

\$12,000

2015

The wind sculpture is self-furling like those found on old farms, to take its self out of strong winds, increasing the longevity of the piece, and uses standard replaceable off-the-shelf sealed stainless-steel bearings. Each color and pattern have historic inspiration.

### **(C) IT'SUGAR Giant Gumball Machine** (collaboration with Jeffrey Zachmann)

Las Vegas Strip, Las Vegas, NV

Stainless steel, steel, aluminum, powder coating, bearings, hardware, plastic balls.

12' x 12' x 25'

\$300,000

2018

Kinetic sculpture entrance in the shape of a large gumball machine that feature large hollow metal gears, levers and a crank surrounded by rolling 10" balls powered by 5 hydraulic motors.

### **(D) Monarch and Prairie Grass Bike Racks** (collaboration with Naomi Schliesman)

Throughout the City of Fergus Falls, MN and Springboard for the Arts, St. Paul, MN

Steel and Powder Coating

Monarch - 47" x 13" x 43"

Prairie Grass – 46½ " x 14½" x 34½"

\$17,520 (12 Bike Racks)

2018-2022

Colored bike racks in the silhouettes of prairie grass and butterflies that are welded ¼" steel coated in industrial powder coating.
