

**Date:** June 11, 2024

**To:** Bjorn Jones, PE  
City Engineer  
125 East Main Street  
Grass Valley, CA 95945

**From:** Laurie Loiza, PE

**Subject:** Intersection Improvements on W. Main Street at Mill Street and at South Auburn Street

The City of Grass Valley has requested a traffic review of two intersections located on W. Main Street at Mill Street and W. Main Street at South Auburn Street. The goal of this memorandum is to provide a summary of current conditions, improvement alternatives and recommendations for these intersections with a focus on pedestrian safety. Accessibility for the disabled was not evaluated in this review. The Grass Valley Police Department provided background information and traffic incident reports to aid in this review and direct observations were made of operations at these intersections to prepare this review.

The two study intersections are adjacent each other and located in the center of downtown Grass Valley, northwest of Highway 49, on W. Main Street. The area is primarily commercial, with many local shops and restaurants that generate substantial pedestrian traffic. Figure 1 shows the locations of the two intersections being reviewed.

## **Intersection #1: W. Main Street & Mill Street**

### ***Existing Conditions***

Prior to 2023, the intersection was 3-way stop-controlled with crosswalks across all three legs. In 2023, the City converted Mill Street between Neal Street and W. Main Street to a pedestrian promenade – restricting vehicular traffic at each end with bollards. All vehicle turns to and from Mill Street were eliminated, however the crosswalks and stop signs on W. Main Street remained after the project was completed. The resulting intersection has single direction stop-control before the first crosswalk in each direction on W. Main Street and then drivers encounter an unprotected crosswalk 40-ft later which, without the former road intersection, now essentially functions as a mid-block crosswalk. W. Main Street is at a 10% grade. Appendix A contains an aerial map of the intersection.

The conversion of Mill Street to a pedestrian promenade has resulted in the following:

- A crosswalk configuration with two successive crosswalks in each direction (one controlled and the other uncontrolled) that is unusual and, under any other circumstances, wouldn't otherwise be designed or constructed in this configuration.
- Pedestrians appear confused by the unusual configuration of the two crosswalks, and some appear tempted to cross through the middle of the intersection directly into the pedestrian promenade.
- Vehicle confusion at double crosswalks:
  - Vehicle approach the first crosswalk and stop due to the stop sign.
  - Vehicles approach the second crosswalk and aren't sure if they need to stop or not. Pedestrians assume on-coming traffic will stop for them.

Coastland Civil Engineering contacted Grass Valley Police Department to gather background information and traffic incidents on this intersection. Officer John Herrera described the following about Intersection #1:

- Vehicles typically do not adhere to stop control (rolling stops)
- Vehicles traveling down the 10% grade have a lesser tendency to stop.

The traffic incident data (Appendix C) supports the above observations and concerns.

## Alternatives

Alternatives to improve pedestrian safety:

| Alt.           | Description   | Pros   | Cons   | Cost                     |
|----------------|---|--|--|--------------------------|
| 1              | <ul style="list-style-type: none"> <li>Add high visibility crosswalk striping and signs to enhance crosswalk visibility at both locations.</li> </ul>   | <p>Lower Cost</p> <p>Enhances driver awareness</p>   | <p>Vehicle &amp; pedestrian confusion remain</p>   | <p>\$10,000-\$15,000</p> |
| 2 <sup>a</sup> | <ul style="list-style-type: none"> <li>Eliminate the easterly/downhill crosswalk.</li> <li>Add high visibility crosswalk striping.</li> <li>Move easterly stop sign uphill to the westerly crosswalk location.</li> <li>Bring limit lines (stop bars) on both sides within 10-ft of remaining crosswalk.</li> </ul> | <p>Pedestrians are all within a stop-controlled crosswalk.</p> <p>Vehicle confusion eliminated</p> | <p>Higher cost</p>   | <p>\$20,000-\$30,000</p> |
| 3              | <ul style="list-style-type: none"> <li>Eliminate the westerly/uphill crosswalk.</li> <li>Add high visibility crosswalk striping.</li> <li>Move westerly stop sign downhill to the easterly crosswalk location.</li> <li>Bring limit lines (stop bars) on both sides within 10-ft of remaining crosswalk.</li> </ul> | <p>Pedestrians are all within a stop-controlled crosswalk.</p> <p>Vehicle confusion eliminated</p> | <p>Higher cost</p> <p>Eastbound stop sign may block access to part of pedestrian promenade.</p>    | <p>\$20,000-\$30,000</p> |
| 4              | <ul style="list-style-type: none"> <li>Eliminate both existing crosswalks and make a new extra-wide textured crosswalk in the middle of the intersection - an extension of the promenade across W. Main Street.</li> <li>Install new stop signs and pavement markings</li> </ul>                                    | <p>Pedestrian friendly</p> <p>Excellent ADA Accessibility</p> <p>Very visible</p>                  | <p>Much higher cost</p> <p>Longer ped. exposure to vehicles</p> <p>Likely to slow traffic flow</p> | <p>\$54,000-\$68,000</p> |

<sup>a</sup> Recommended alternative, see Appendix A for exhibit.

## Conclusions and Recommendations

Alternative 2 is recommended. Despite its higher cost than Alternative 1, it upholds the overall goal of pedestrian safety by consolidating pedestrian traffic into a single stop-controlled crosswalk, thereby reducing pedestrian and vehicle confusion. While Alternative 3 provides similar improvements to Alternative 2, the stop sign placement on eastbound Main Street is problematic as it may block full access to the promenade when bollards are removed. Alternative 4 has a high cost and may delay through traffic more than other alternatives.

## **Intersection #2: W. Main Street & S. Auburn Street**

### ***Existing Conditions***

This location is a four-way signal-controlled intersection with crosswalks on each leg. It is a relatively high-volume intersection for the area and used by through traffic and visitors to the downtown area. Appendix B shows an aerial map.

The City is concerned that drivers turning left from S. Auburn Street onto W. Main Street are unaware of pedestrians crossing W. Main Street. Officer Herrera suspects drivers making the left turn are not focused on pedestrians in the crosswalk. No traffic incident reports were provided.

### ***Alternatives***

Three alternatives were developed for this intersection:

| Alternative    | Description  | Pros  | Cons  | Cost              |
|----------------|--|---|---|-------------------|
| 1 <sup>b</sup> | <ul style="list-style-type: none"> <li>Remove westerly crosswalk on W. Main Street</li> <li>Install pedestrian barriers on existing ramps</li> <li>Install no crossing signs</li> <li>Modify traffic signal equipt.</li> <li>Modify signal timing</li> </ul> | <p>Removes left-turn/ped conflict</p> <p>Increased intersection efficiency, especially left-turn to W. Main St.</p> | <p>Cost</p> <p>Longer route for certain pedestrians</p> <p>Barriers subject to vehicle damage</p> | \$30,000-\$40,000 |
| 2              | <ul style="list-style-type: none"> <li>Modify signal timing to add dedicated pedestrian phase to segregate north-south pedestrian travel from vehicular traffic.</li> </ul>  | <p>Removes left-turn/ped conflict</p>   | <p>Significantly reduces intersection efficiency, especially in peak demand periods.</p>          | \$10,000          |
| 3              | <ul style="list-style-type: none"> <li>Modify signal timing to advance the walk signal for 3 to 7 seconds to give pedestrians a head start before left-turn/thru gets green.</li> </ul>  | <p>Increased pedestrian visibility</p>  | <p>Does not fully resolve safety concern</p> <p>Reduces intersection efficiency</p>               | \$10,000          |

<sup>b</sup>See Appendix B for exhibit Alternative 1

### ***Conclusions and Recommendations***

Coastland recommends Alternative 1. It reduces pedestrian risk by removing a pedestrian/vehicle point of conflict between left-turn movements from northbound S. Auburn Street to W. Main Street.
