CAPITAL IMPROVEMENTS ELEMENT

GOAL 8

The City of Green Cove Springs shall ensure the orderly and efficient provision of the following public facilities to serve the needs of the present and future residents: roads, sanitary sewer, solid waste, drainage, potable water, and recreation/open space.

Objective 8.1

Public facilities shall be provided consistent with the adopted Five-Year Schedule of Capital Improvements to correct existing deficiencies, if any; to accommodate desired future growth; and to replace obsolete and worn-out facilities.

Policies

8.1.1 As part of the annual budgeting process, the City shall prepare a Five-Year Schedule of Capital Improvements, which shall be based on:

An inventory of capital improvements for public facilities needed to correct existing deficiencies, to correct projected future deficiencies, and to replace obsolete and wornout facilities;

The estimated cost of the capital improvement;

The priority of the capital improvement, consistent with the criteria in Policy 8.1.3;

An estimate of funds available to finance the capital improvements.

8.1.2 A capital improvement in the context of the Comprehensive Plan and the Five-Year Schedule of Capital Improvements shall refer to a public expenditure for roads, sanitary sewer facilities, solid waste facilities, drainage facilities, potable water facilities, and recreation/open space facilities which: is needed to meet concurrency requirements, and requires an investment of \$25,000 or more for the construction, acquisition, or installation of facilities or for the acquisition of land.

8.1.3 The scheduling of capital improvements shall be predicated on the following criteria to ensure ranking of the improvements in the appropriate order of need:

Priority A

1. Capital improvements needed to protect public health and safety.

Priority B

- 1. Capital improvements needed to correct existing deficiencies.
- Capital improvements needed to replace or repair obsolete or worn-out facilities in order to maintain adopted LOS standards.

Priority C

- 1. Capital improvements that will increase efficient use of existing public facilities where the economic benefit exceeds the economic costs of increasing the facility efficiency.
- 2. Capital improvements that will promote redevelopment and/or in-fill development.

Priority D

- 1. Capital improvements that represent a logical extension of public facilities to accommodate projected new development that is consistent with the Future Land Use Map.
- 2. Capital improvements needed to serve developments that were approved prior to the adoption of this Plan.

Priority E

- 1. Capital improvements that will further the plans of the St. Johns Water Management District and other state agencies that may provide public facilities within the City.
- **8.1.4** As part of the annual budgeting process, the City shall review the criteria used to prioritize capital improvements on the basis of consistency with local comprehensive planning activities, cost feasibility, effectiveness, and overall impact on the budget.
- **8.1.5** The City shall ensure that all proposed capital improvements are consistent with each of the goals, objectives, and policies in this Comprehensive Plan.

Objective 8.2

The City shall maintain a list of inefficient, worn-out, or obsolete public facilities.

Policies

- **8.2.1** City departments shall identify inefficient, worn-out, or obsolete public facilities that need to be replaced or improved in order to maintain the adopted LOS standards.
- **8.2.2** City departments shall prepare cost estimates for the replacement or improvement of the public facilities identified in Policy 8.2.1 and shall identify potential sources of financing, if any.
- **8.2.3** Consistent with Policy 8.1.1, the public facilities and cost estimates shall be included in the Five-Year Budgeting process.

Objective 8.3

The City shall use Level of Service (LOS) Standards to measure the adequacy of existing public facilities and to ensure that future development will be served with adequate public facilities.

8.3.1 The City shall require that public facilities shall meet or exceed the following Level of Service Standards:

<u>Public Facility</u> Principal Arterials	LOS Standard Traffic "D" peak hour traffic
Minor Arterials	D" peak hour traffic
Collector	"D" peak hour traffic
Local Road	"D" peak hour traffic
Sanitary Sewer	120 gallons per person per day;
Potable Water	150 gallons per person per day;
Solid Waste	8 pounds per capita per day;
<u>Drainage</u> Minor Internal Facilities	10-year return period storm; 24-hour duration;
Storage basins	25-year return period storm for peak flow attenuation; 24- hour duration;
Major Drainage Facilities	100-year return period storm; 24-hour duration;
Water Quality	Treatment of stormwater runoff shall be required for all development, redevelopment and, when expansion occurs, in existing developed areas. The stormwater treatment system or systems can be project specific, serve sub-areas within the City or be a system to serve the entire City. Regardless of the area served and in accordance with Chapter 17-2562-330, F.A.C., the stormwater treatment systems must provide a level of treatment for the runoff from the first one (1) inch of rainfall for projects in drainage basins of 100 acres or more, or as an option for projects with drainage basins less than 100 acres, the first one-half (1/2) inch of runoff in order to meet receiving water quality standards of Chapter 1762-302, Section 1762-302.500, F.A.C.

Formatted: Indent: Left: 0", Tab stops: 0.75", Left + 3.19", Left + Not at 3.74"

Stormwater discharge facilities shall be designed so as to not lower receiving water quality or degrade the receiving water body below the minimum conditions necessary to assure the suitability of water for the designated use of its classification as established in Chapter 1762-302, F.A.C. It is intended that all standards in these citations are to apply to all development and redevelopment and that any exemptions or exceptions in these citations, including project size thresholds, are not applicable. Infill residential development within improved residential areas or subdivisions existing prior to the adoption of this comprehensive plan, must ensure that its post-development stormwater runoff will not contribute pollutants which will cause the runoff from the entire improved area or subdivision to degrade receiving water bodies and their water quality as stated above.

Water Quantity

Post-development runoff rates from the site shall not exceed peak pre-development runoff rates.

Drainage Water Quality

 Minor Internal Facilities
 10-year return period storm; 24-hour duration

 Storage Basins
 25-year return period storm for peak flow

 Minimum Floor Elevations
 attenuation; 24 hour duration

Major Drainage Facilities 100 year return period storm 24 hour duration.

Treatment of stormwater runoff shall be required for all development, redevelopment and, when expansion occurs, existing developed areas. The stormwater treatment system or systems can be project specific, serve sub-areas within the City or be a system to serve the entire City. Regardless of the area served and in accordance with Chapter 17-25, F.A.C., the stormwater treatment systems must provide a level of treatment for the runoff from the first one (1) inch of rainfall for projects in drainage basins of 100 acres or more, or as an option for projects with drainage basins less than 100 acres, the first one half (1/2) inch of runoff in order to meet receiving water quality standards of Chapter 17-302, Section17-302.500, F.A.C. Stormwater discharge facilities shall be designed so as to not lower receiving water quality or degrade the receiving water body below the minimum conditions necessary to assure the suitability of water for the designated use of its classification as established in Chapter 17-302, F.A.C.

Formatted: Indent: Left: 1.63", Hanging: 2.12"

		be determined by the lesser o	f FISH Capacity or core		
	capacity.				

8.3.2 The City shall annually review the adopted Level of Service Standards to determine their adequacy to meet public needs and to determine cost feasibility and budget implications.

Objective 8.4

The City shall require that developers provide and pay for all public facilities at the adopted level of service needed by the development, except where there is sufficient capacity or where the needed facilities are included in the Five-Year Schedule of Capital Improvements.

Policies

- **8.4.1** The City shall require the performance bonding of project-related utility or traffic circulation improvements necessary to accommodate the development.
- **8.4.2** Annually, the City shall review the potential use of impact fees as a means to assess new developments for needed public facilities.

8.4.3 The City shall continue to require mandatory dedications as a condition of plat approval.

Objective 8.5

The City shall manage the land development process to ensure the provision of needed capital improvements for development orders that were issued prior to the adoption of the Comprehensive Plan and for future development and redevelopment projects.

Policies

- **8.5.1** The City shall require that new development or redevelopment projects meet the established Level of Service Standards.
- **8.5.2** The City shall provide public facilities at the adopted Level of Service Standards to serve developments that have been issued development orders prior to the adoption of the Comprehensive Plan consistent with Policy 8.1.3.

Objective 8.6

The City shall manage its fiscal resources to ensure the provision of needed capital improvements for development orders that were issued prior to the adoption of the Comprehensive Plan and for future development and redevelopment projects.

Policies

- **8.6.1** The City shall limit outstanding indebtedness for capital facilities to ten (10) percent of the assessed property value, except in the case of natural disaster as determined by the City Council.
- **8.6.2** There shall be no limitation placed on the use of revenue bonds as a percentage of the total debt of the City.
- **8.6.3** The City shall adopt a capital budget as part of the annual budgeting process to schedule capital facility construction.
- **8.6.4** Annually as part of the budgetary process, the Finance Director shall prepare estimates of existing and potential revenue sources.

Objective 8.7

The City shall maintain the Concurrency Management System.

Policies

8.7.1 The City shall maintain provisions in the land development regulations for concurrency to ensure that public facilities are provided to serve future development and redevelopment projects concurrent with the impacts of such development the following criteria shall be used in the Concurrency Management System to determine when concurrency has been satisfied.

8.7.2 The following criteria shall be used in the Concurrency Management System to determine when concurrency has been satisfied:

Category 1

- 1. The necessary facilities and services are in place at the time a development permit is issued; or
- A development permit is issued subject to the conditions that the necessary facilities and services will be in place when prior to the impacts of the development occur; or;
- 3. The necessary facilities are under construction when a permit is issued; or
- 4. The necessary facilities and services are guaranteed in an enforceable development agreement that includes the provisions of 1, 2, and 3 above.

Category 2

- The necessary facilities and services are subject to a binding executed contract which provides for commencement of construction or provision of the required facilities and services within one year of the issuance of the development permit; or
- The necessary facilities and services are guaranteed in an enforceable development agreement that requires commencement of construction of the required facilities or provision of the required facilities and services within one year of the issuance of the development permit.
- **8.7.3** For potable water, water supply, sanitary sewer, solid waste, and drainage, concurrency shall be met if one of the Category 1 provisions, as listed in Policy 8.7.2, has been satisfied.
- **8.7.4** For recreation and parks, concurrency shall be met if one of the Category 1 or Category 2 provisions, as listed in Policy 8.7.2, has been satisfied.
- **8.7.5** For roads, concurrency shall be met if one of the Category 1 or Category 2 provisions, as listed in Policy 8.7.2, have been satisfied or if the road is scheduled for improvement prior to the beginning of the fourth year of the adopted Five-Year Schedule of Capital Improvements, provided that a plan amendment shall be required to eliminate, defer, or delay construction of said roadway listed in the Five-Year Schedule of Capital Improvements.
- **8.7.6** The City shall continue to monitor the remaining capacity and deficiencies of the public facilities addressed in the Capital Improvements Element.

- **8.7.7** As part of the preparation of the Five-Year Schedule of Capital Improvements, the City shall annually review the capacity or deficiency of the following public facilities: roads, sanitary sewer, solid waste, drainage, potable water, and parks and recreation. The annual review shall, at a minimum, analyze the following information for each facility:
 - a. adopted level of service standard;
 - b. existing deficiency or capacity;
 - c. reserved capacity for approved but unbuilt development;
 - d. improvements to be made by all approved developments; and
 - e. improvements to be made by the City or any other governmental agency.
- **8.7.8** A concurrency certificate shall be required prior to the issuance of any final development order or final development permit. Final development orders and permits shall contain a specific plan for development including the densities and intensities of development.
- 8.7.9 The City may approve developments in phases or stages.
- **8.7.10** No development order shall be issued within those areas of the City as defined below where public facilities do not meet the adopted level of service standards:
 - a. Roads, area of impact pursuant to the requirements set forth in Florida Statutes 163.3180 (h);
 - b. Sanitary sewer, treatment plant service area;
 - c. Solid waste, city-wide;
 - d. Drainage, drainage sub-basin;
 - e. Potable water, treatment plant service area; and
 - f. Parks and recreation, city-wide.
 - g. Public School, Concurrency Service Area
- **8.7.11** If a development fails to meet a condition of approval of the concurrency application, no additional development orders, development permits, or certificates of occupancy may be issued for the development, until such time as the conditions of concurrency approval have been fully satisfied.

- **8.7.12** If any concurrency requirement as stipulated in Policies 8.7.3 through 8.7.5 can not be satisfied, the developer may take the following corrective actions:
 - (1) Provide the necessary improvements to maintain the adopted level of service; or
 - (2) Reduce the impact of the proposed project so that concurrency requirements can be met.
- **8.7.13** The determination of concurrency shall be determined by comparing available capacity of a facility to the demand created by the proposed project. Available public facility capacity that can be reserved on a first-come-first-serve basis shall be calculated by adding together the design capacity and the capacity of new facilities that will become available on or before the date of occupancy of the development, if any, and subtracting reserved capacity and used capacity.
- **8.7.14** All development shall be consistent with the terms and conditions of the development order or development permit for which a concurrency certificate was issued. Any proposed change from the development order or development permit shall cause the proposed change to be subject to concurrency review and issuance of a concurrency certificate if applicable.
- **8.7.15** If the developer decides to provide some or all of the needed facilities to satisfy the concurrency requirements, the concurrency application shall include appropriate plans for improvements, documentation that such improvements are designed to provide the capacity necessary to achieve or maintain the level of service, and recordable instruments guaranteeing the construction, consistent with the provisions of Policy 8.7.2, Category 1, 1-3.
- **8.7.16** The City shall provide level of service information as contained in the Comprehensive Plan to the public for all public facilities.
- **8.7.17** If a road segment is deficient as of the date of application or inquiry, the developer may prepare a more detailed Highway Capacity Analysis. The analysis shall be consistent with the TIPs traffic analysis program prepared by the Florida Department of Transportation.
- 8.7.188.7.17 The City may require additional studies or informationshall require a , such as a traffic study for new and redevelopment pursuant to the City's Traffic Impact Analysis Guidelines. , from applicants in order for an accurate assessment to be conducted. Said requests shall be reasonable and made in writing to the applicant. Review and approval of proposed development may be postponed for a reasonable time to allow the applicant to comply with such requests. If the applicant does not comply with such a request, the application shall be denied.

- 8.7.198.7.18 The City Manager or their designee shall prepare an assessment of project-related impacts and an assessment of public facility capacity. Based on these, the City Manager shall determine if available capacity for all public facilities exceeds project-related impacts and issue or deny the concurrency certificate accordingly.
- **8.7.20**<u>8.7.19</u> The assessment of project-related impacts shall be based on the adopted level of service standards, the total number and type of dwelling units for residential development applications, and the type and intensity of use for non-residential development applications. The assessment may be based on any studies, measurements, or calculations prepared by the developer or upon professionally acceptable methods. The selected methodologies must be clearly described and the data sources must be clearly identified.

8.7.218.7.20 The assessment of public facility capacity shall, at a minimum, include the following types of information for each public facility:

- (1) Design capacity;
- (2) Improvement capacity of new facilities that will become available on or before the date of occupancy of the development, if any;
- (3) Used capacity;
- (4) Reserve capacity; and
- (5) Available capacity.

8.7.228.7.21 The issuance of a concurrency certificate constitutes the issuance of reserve capacity, where applicable, as stipulated in the certificate.

8.7.238.7.22 The concurrency certificate shall be valid so long as the development conforms to time limitations that may be stipulated in the development order or permit.
