

**METROPOLITAN DEVELOPMENT COMMISSION
HEARING EXAMINER**

March 12, 2026

Case Number: 2026-ZON-009
Address: 4500 Blackstone Drive (Approximate Address)
Location: Perry Township, Council District #24
Petitioner: Anthony Trickle
Request: Rezoning of 0.507-acre from the D-A district to the D-3 district to provide for residential uses.
Staff Recommendations: Approval
Current Land Use: Residential accessory structure
Staff Reviewer: Robert Uhlenhake, Senior Planner

PETITION HISTORY

This is the first hearing for this petition.

STAFF RECOMMENDATION

Staff recommends **approval** of the request.

PETITION OVERVIEW

LAND USE

The 0.507-acre site is comprised of a parcel developed with a residential accessory structure. The site is surrounded by single-family dwellings zoned D-3.

REZONING

The request would rezone the property to the D-8 district to allow for residential uses that are not permitted in the existing C-1 district.

The D-A District is intended to provide for animal and poultry husbandry, farming, cultivation of crops, dairying, pasturage, floriculture, horticulture, viticulture, apiaries, aquaculture, hydroponics, together with necessary, accompanying accessory uses, buildings, or structures for housing, packing, treating, or storing said products; or lands devoted to a soil conservation or forestry management program. A single-family dwelling is intended to be permitted as a part of such agricultural uses. A secondary provision of this district is large estate development of single-family dwellings. This district fulfills the very low-density residential classification of the Comprehensive General Land Use Plan. This district does not require public water and sewer facilities.

The D-3 district is intended to provide for low or medium intensity residential development. Land in this district should have good thoroughfare access, be relatively flat in topography, and be afforded pedestrian linkages to community and neighborhood services and facilities (schools, parks, shopping areas, etc.). Recreational facilities developed for the neighborhood complement the treed yards on the individual lots. Predominantly single-family detached dwellings are envisioned with two-family dwellings on corner lots in this district. The D-3 district has atypical density of 2.6 units per gross acre. This district fulfills the low-density residential classification of the Comprehensive General Land Use Plan. All public utilities and facilities must be present. Development plans, which may include the use of clustering, should incorporate, and promote environmental and aesthetic considerations, working within the constraints and advantages presented by existing site considerations, including vegetation, topography, drainage, and wildlife.

STAFF ANALYSIS

The request would rezone the property to the D-3 district to allow for residential uses.

According to Assessor’s records, the residential accessory structure was constructed in 2014. It is believed that the construction was associated with an adjacent property and would have been considered as construction in a side yard, which would allow for it to be permitted without a residential component. In 2017, the property was sold to the petitioner, who does not live adjacent to the site. This resulted in the property being non-compliant without it being attached to a primary dwelling unit.

Staff is supportive of the rezoning because it would allow for residential development that is compatible with the surrounding area and would align with the Suburban Neighborhood recommendation of the Comprehensive Plan.

COMPREHENSIVE PLAN ANALYSIS

Comprehensive Plan

The Comprehensive Plan recommends the Suburban Neighborhood typology which is predominantly made up of single-family housing but is interspersed with attached and multifamily housing where appropriate. This typology should be supported by a variety of neighborhood-serving businesses, institutions, and amenities. Natural Corridors and natural features such as stream corridors, wetlands, and woodlands should be treated as focal points or organizing systems for development. Streets should be well-connected, and amenities should be treated as landmarks that enhance navigability of the development. This typology generally has a residential density of 1 to 5 dwelling units per acre, but a higher density is recommended if the development is within a quarter mile of a frequent transit line, greenway, or park.

Pattern Book / Land Use Plan

The Comprehensive Plan consists of two components that include The Marion County Land Use Pattern Book (2019) and the land use map. The Pattern Book provides a land use classification system that guides the orderly development of the county and protects the character of neighborhoods while also being flexible and adaptable to allow neighborhoods to grow and change over time.

The Pattern Book serves as a policy guide as development occurs. Below are the relevant policies related to this request:

Conditions for All Land Use Types – Traditional Neighborhood Typology

- All land use types except small-scale parks and community farms/gardens in this typology must have adequate municipal water and sanitary sewer.
- All development should include sidewalks along the street frontage.
- In master-planned developments, block lengths of less than 500 feet, or pedestrian cut-throughs for longer blocks, are encouraged.

Conditions for All Housing

- A mix of housing types is encouraged.
- Should be within a one-mile distance (using streets, sidewalks, and/or off-street paths) of a school, playground, library, public greenway, or similar publicly accessible recreational or cultural amenity that is available at no cost to the user.
- Primary structures should be no more than one and a half times the height of other adjacent primary structures.
- Should be oriented towards the street with a pedestrian connection from the front door(s) to the sidewalk. Driveways/parking areas do not qualify as a pedestrian connection.
- Developments with densities higher than 15 dwelling units per acre should have design character compatible with adjacent properties. Density intensification should be incremental

with higher density housing types located closer to frequent transit lines, greenways, or parks.

Detached Housing (defined as single-family dwellings)

- The house should extend beyond the front of the garage. Garages should be loaded from an alley or side street when possible and should be detached if located on the side of the house.
- Secondary units are encouraged.
- Lots should be no larger than one and a half times the adjacent lots.

Attached Housing (defined as duplexes, triplexes, quads, townhouses, row houses, stacked flats, and other, similar legally complete dwellings joined by common walls and typically with each unit on its own lot or part of a condominium.)

- Duplexes should be located on corner lots, with entrances located on different sides of the lot.
- It is preferred that townhomes should be organized around intersections of neighborhood collector streets, greenways, parks or public squares, or neighborhood-serving retail.
- If the above conditions are not met, individual buildings of attached housing (not part of a complex) may be interspersed with single-family homes but should not make up more than 25% of the primary residential structures on a block.

Infill Housing Guidelines

The Infill Housing Guidelines were updated and approved in May 2021, with a stated goal “to help preserve neighborhood pattern and character by providing guiding principles for new construction to coexist within the context of adjacent homes, blocks, and existing neighborhoods. These guidelines provide insight into basic design concepts that shape neighborhoods, including reasons why design elements are important, recommendations for best practices, and references to plans and ordinance regulations that reinforce the importance of these concepts.”

These guidelines apply to infill development in residential areas within the Compact Context Area and include the following features:

Site Configuration

- Front Setbacks
- Building Orientation
- Building Spacing
- Open Space
- Trees, Landscaping, and the Outdoors

Aesthetic Considerations

- Building Massing
- Building Height
- Building Elevations and Architectural Elements

Additional Topics

- Secondary Dwelling Units, Garages, and Accessory Structures
- Adapting to the Future

As established neighborhoods experience new development, infill residential construction will provide housing options for new and existing residents. Increased population contributes positively to the local tax base, economic development, lively neighborhoods, and an interesting city. As infill construction occurs, it is important to guide development in a way that complements current neighborhoods. Each home in a neighborhood not only contributes to the existing context of adjoining houses and the block, but to the sense of place of the entire neighborhood.”
