Re: Macon Worthington Engine Parts and Field Service

The following two motions and associated bills encompass the bid award notification, Hold Harmless Agreement, and Field Services contract with IDS, Inc. for the harvesting of the Worthington engine parts that will be used to repair our Worthington engine and provide additional spare parts for these engines in the future. Combined, these two engines provide approximately 13 MW of generation.

The opportunity to extend the life of our two Worthington engines was presented to the Board during the January 17 study session.

If you have additional questions or comments, please let me know.

Best regards,

Don Schuette

Director of Electric Utilities
