Re: Macon Worthington Engine Parts and Field Service

Please find attached the bid award notification, Hold Harmless Agreement, and Field Services contract with IDS, Inc. for the harvesting of the Worthington engine parts that will be used to repair our Worthington engine and provide additional spare parts for these engines in the future. New or used parts are basically non-existent and this opportunity will provide for extended life for our two Worthington engines. Combined, these two engines provide approximately 13 MW of generation.

If you have additional questions or comments, please let me know.

Best regards,

Don Schuette

Director of Electric Utilities
