Public Comment / Question

We wanted to let the Town Council know that we are opposed to both the closing of Mars Way or making it a one-way street. We do sympathize with the owners on the street because of the traffic. But we are concerned about overall traffic congestion that will already happen when the Caretta project is completed and ultimately other development such as the Christmas tree lot and/or the land where Cathy's Connection and the Charlie's Reef Grill are. We support the addition of speed humps and the idea of making one side of the street no parking and turning it into a sidewalk to make things safer. Thank you.

Sent from my iPhone

Thank you Mr. Mayor and the Juno Beach Town Council for the opportunity to provide comments regarding Mars Way.

First, I would to express my support of the presentation made by Jane LeClainche at the January 8th Mars Way workshop. Her presentation provides a good history and solutions to issues pertaining Mars Way.

I think it is gratifying to know that the recent traffic study on Mars Way shows speeds have been trending downward compared to speeds collected in 2020. However, traffic volumes have increased. We have a volume problem and not necessarily a speed issue.

Several individuals have suggested that speed tables should be installed. Speed tables are not the answer.

A majority of Mars Way residents signed a petition opposing speed tables. I would vehemently oppose speed tables.

Speed tables will not address the quantity of traffic, type of traffic, narrowness of the road, line of sight issues on the road and line of sight issues pulling out of one's driveway. Also, the new speed study shows most drivers are driving between 20 and 28 mph. Speed tables wouldn't be effective in reducing speeds further and would be a waste of money.

Additionally, when speed tables have been installed in other communities they are often removed due to excessive noise or

other reasons.

The solution is to make Mars Way a one way east to west or close the median at Mars Way and U.S. 1, which is a dangerous intersection.

The Florida DOT will pick up the cost eliminating any fiscal burden on Juno Beach taxpayers.

Thank you.

Which 2022 SUVs Are Built On a Truck Chassis?

In the US there are 18 SUVs made the old way; with body-on-frame construction. We give you the list of them, and a brief rundown so if you're looking for one of these SUVs, you'll know where to look.

by [THOM TAYLOR](#)

2 min read

Some SUV buyers feel that without a separate truck frame, it isn't an SUV. What used to be a given is no more. All crossovers are essentially built around a car unibody platform. Some of the larger SUVs are too. However, for 2022 there are 18 SUVs that still use a separate truck frame from the body.

Most of these truck frames get tweaked for use under an SUV. This is due to shorter wheelbases, weight requirements, and other modifications to perform better, and ride smoother than their truck counterparts. And that part too is different from unibody SUVs. The ride tends to be more firm, and, well, more truck-like. This isn't bad, since pickup trucks have come a long way in the ride and comfort category.

With a list this long, we can't get too far in the weeds on specs and other info. But knowing you want a body-on-frame SUV means you need to know what is out there. So this list is for you.

Toyota Sequoia

This 2023 Toyota Sequoia TRD Pro is a hybrid 4x4 | Toyota

Available as both a two- and four-door, [the Wrangler](#) is a throwback, and legendary in off-road circles. The Unlimited is the Jeep Wrangler's top model. Prices start at \$30,000 for the four-door.

Ford Expedition/Lincoln Navigator

2022 Ford Expedition | Ford

Ford's [Expedition](#) and Lincoln Navigator are essentially the same vehicles, based on Ford's F-150 frame. Of course, the Nav is the luxury counterpart, but the Expedition is no slouch in that department, either.

Ford Bronco

The 2022 Ford Bronco arrives on stage | Getty

The much-heralded [Ford Bronco](#) is a body-on-frame SUV, available as either a two- or four-door. Both have taken a chunk out of Jeep sales, so Ford must have hit its sweet spot.

Cadillac Escalade, GMC Yukon/Yukon XL, Chevy Tahoe/Suburban

2022 Chevy Suburban | Chevrolet

[The Escalade](#), Yukon, Tahoe, and Suburban are all based on the same body and frame. Both the Tahoe and Yukon are on shorter wheelbases than their siblings but are essentially the same platform. The base-price breakdown is Escalade: \$76,295; Yukon: \$51,000; Yukon XL: \$54,800; Tahoe: \$50,200; Suburban: \$52,900.
