Brush School District Transportation Facility-

BBD continues to exceed my expectations. With each and every project, the BBD team's commitment to professionalism, transparency, quality, and customer satisfaction are unparalleled. I would recommend that anyone considering a school or other facilities project include Buildings By Design on their list of bidders - they provide excellent workmanship at a fair and reasonable price.

-Bill Wilson, Superintendent of Schools, Brush School District RE-2J

BUILDINGS BY DESIGN

JULY 14, 2023

TOWN/OWNER BRIAN PHILLIPS, CHIEF OF POLICE TOWN OF JOHNSTOWN 430 S. PARISH AVE. JOHNSTOWN, COLORADO 80534 BUILDINGS BY DESIGN

Buildings By Design LLC. 515 Industrial Park Rd Brush, CO 80723 PHONE: 970-842-5837 FAX: 970-842-4903 S-CORP LLC. | 19 YEARS IN BUSINESS

RE: Buildings By Design Proposal - Police Department Renovation and Expansion Project CMAR

On behalf of Buildings By Design, I would like to express our sincere gratitude for the opportunity to submit our qualifications for the Town of Johnstown Police Department Renovation and Expansion Project.

We are thrilled to be considered for such an important endeavor within the community. Our team at Buildings By Design has a proven track record of successfully delivering high-quality construction projects, and we are excited to bring our expertise to the table.

Throughout the years, we have collaborated with esteemed architectural firms, such as D2C Architects, on numerous projects. This partnership has allowed us to foster strong working relationships and deliver exceptional results. We greatly appreciate the opportunity to continue this collaborative spirit on the Police Department Renovation and Expansion Project.

Our team has extensive experience in managing police department renovations and understands the unique requirements and challenges associated with them. We can help you navigate the common challenges that arise during the renovation process.

Operational disruptions: Renovations can disrupt the daily operations of a police department. The construction process may require parts of the building to be inaccessible, affecting workspace, storage, and equipment availability. This can impact the department's ability to carry out its duties efficiently. Buildings By Design will collaborate with D2C Architects and the Town of Johnstown Police Department to ensure that we minimize impacts to your operational facility by approaching construction sequencing with specific phases to manage the construction elements to minimize disruptions.

Security: Safety is of paramount importance, and it is our responsibility to ensure that all construction processes meet the highest safety standards. Our team will collaborate with the Town of Johnstown Police Department to set specific security protocols for access to the facility during construction. Additionally, we will manage any additional security enhancements that are necessary for your department's operational needs.

Technology integration: Modern police departments rely heavily on technology, including computer systems, surveillance equipment, and communication networks. Our team has experience with managing the integration of new technologies or the upgrades of existing systems, which can be challenging to implement seamlessly.

Budget constraints: Renovations can be costly, and police departments often operate within limited budgets. Securing sufficient funding for the renovation project can be a significant challenge. We will ensure that we put our very best foot forward to ensure that we provide the most competitive pricing with qualified subcontractors. We will also ensure cost efficiencies during construction to minimize the impact to the overall budget.

We are committed to ensuring the project is completed with the utmost professionalism, efficiency, and adherence to the highest quality standards. Our goal is to create a modern and functional facility that supports the vital work of the Johnstown Police Department while enhancing the safety and well-being of the community.

Once again, we would like to express our gratitude for considering our qualifications for this project. We firmly believe that our experience, expertise, and commitment make us an ideal partner for the Town of Johnstown. We eagerly await the opportunity to contribute to the success of this important initiative.

If you require any additional information or have any questions, please do not hesitate to contact me directly. Please note that we are also acknowledging receipt of Addendum #1 dated 06/16/2023 and addendum #2 dated 07/03/2023.

Sincerely,

Travis Lefever | Managing Member & Project Executive travis@buildingsbydesign.com | 970-842-5837

Describe your proposed Project Approach, addressing:

- Suggested procurement packages, construction sequences, means and methods.
- Value engineering ideas for the most cost-effective solutions.
- Input on factors such as cost, ease of installation, delivery schedule, quality, potential
- contracting, or construction issues.
- Partnering.
- Method of establishing a project contingency and who controls the use of the contingency and procedures for justifying use of contingency funds.
- Comments and suggestions regarding the proposed Contract Documents. If desired, propose alternate Contract Documents. The Town will consider other standard CMAR Contract Documents in lieu of the sample Documents included in this RFP.
- Provide the percentage and scope of work that will be self-performed vs. those elements of work
- that will be subcontracted out.
- Describe availability, bandwidth, and resources available to complete the project.

Our proposed project approach for the Johnstown Police Department Construction Manager at Risk project is designed to ensure the successful delivery of the project within the specified budget, timeline, and quality requirements. Our approach emphasizes collaboration, transparency, and effective project management techniques to mitigate risks and maximize project outcomes. The key steps of our proposed project approach are as follows:

Pre-Construction Phase:

Project Initiation: We will conduct an initial project kick-off meeting with key stakeholders, including representatives from the Johnstown Police Department, D2C Architects, local authorities, and any additional relevant project member.

Planning and Design: We will collaborate with the project stakeholders to define the project requirements, establish design criteria, and develop a detailed project plan, including schedules, budgets, and quality control measures.

Procurement: We will collaborate with Johnstown Police Department and D2C architects to choose subcontractors and suppliers based on competitive bidding processes, qualifications, and value engineering principles for our procurement packages.

Construction Sequencing.: The construction sequence will depend on the project's phasing requirements, with careful consideration given to minimizing disruptions to the ongoing operations of the police department. We have provided a schedule and phasing plan to sequence the project in the following. To ensure that the Johnstown police department can continue to use the building during construction, the project will be divided into three phases. We will look to demolish Phase A while excavating and laying the foundation for Phase C, allowing the team to work simultaneously in two different locations. Phase B will remain occupied during this time. Upon completion of Phase A, we will demolish Phase B before beginning interior finishes on both Phase B and Phase C. This will require coordination with the design team and the Johnstown police department to ensure feasibility and adjust our plan as needed. We must ensure successful collaboration with all stakeholders to modify the phasing boundaries as necessary to accommodate the building's occupants.

Value Engineering & Constructibility Analysis: When it comes to value engineering ideas for renovating the Johnstown Police Department, there are several strategies we can help you consider. Value engineering focuses on optimizing the value of a project by identifying cost-saving measures without compromising functionality or quality. Here are some of our thoughts for value engineering ideas for the renovation of the Johnstown Police Department:

- 1. Energy-efficient upgrades: Incorporate energyefficient lighting fixtures, HVAC systems, and insulation. This will not only reduce operational costs but also contribute to sustainability efforts.
- 2. Space optimization: Analyze the existing layout and identify opportunities to optimize space utilization. Consider flexible workstations, multi-purpose rooms, and efficient storage solutions to maximize usable area.
- 3. Technology integration: Explore cost-effective technology solutions to enhance security systems, communications, and data management.
- 4. Sustainable materials: Opt for sustainable and durable building materials that require minimal maintenance.
- Workflow analysis: Study the department's operations and workflows to identify areas of inefficiency. This analysis can help streamline processes, improve communication, and enhance overall productivity.
- 6. Renovation phasing: Break down the renovation project into phases, prioritizing critical areas or functions. This approach allows for cost distribution over time, minimizing disruptions to daily operations and optimizing budget allocation.
- 7. Salvaging and reusing existing elements: Assess if any existing fixtures, furniture, or equipment can be salvaged and repurposed. This reduces waste and lowers procurement costs for new items.
- 8. Value-based procurement: Evaluate different suppliers and contractors based on their value proposition rather than solely considering the lowest bid. We will look for vendors with a track record of delivering quality work within budget and on schedule.
- 9. Future-proofing: Anticipate future needs and trends when making design and infrastructure decisions. This can involve incorporating modular components that can be easily modified or expanded as requirements evolve.
- 10. Collaborative partnerships: Engage with local businesses, community organizations, and educational institutions to explore potential partnerships. This can lead to cost-sharing opportunities, volunteer support, or access to specialized expertise.

Remember, value engineering requires a collaborative and creative approach. Involving stakeholders from different departments, including the police personnel, architects, engineers, and project managers, will ensure a well-rounded perspective and innovative ideas for cost optimization. **Innovation & Cost Savings Tracker:** In order to help with future delivery method decisions and to maintain the trust and confidence in the project management process. It has been our experience that decisions need to be recorded as they happen and there needs to be a team commitment to the process or this information is easily forgotten. We will work with the Town of Johnstown and D2C architects and any additional project members & consultants to update the decision tracking matrix.

Schedule and Forecasting Analysis: As the design is being refined, we will develop and maintain resource loaded project schedules. Upon NTP, our scheduling team will develop an initial CPM schedule with all preconstruction and construction activities that encompasses all project elements to include:

- Design-path milestones, project administration and program-level schedule constraints
- Potential elements external to the project that are outside the team's direct execution scope but have the ability to impact project timelines
- Anticipated construction sequencing and work item dependencies, including acceleration and recovery scenarios based on discovery work performed during project pursuit and preconstruction discovery
- Application and approvals for permits, reviews and submissions
- Material procurement of long-lead items
- Quality assurance, project controls and subcontractor selection

Key benchmarks, decisions and updates will not only be reflected in the schedule, but will be tracked in Risk and Decision Tracking matrix through the preconstruction phase. Innovations and opportunities for acceleration will also be identified, tracked and vetted for inclusion in the CPM schedule. Our team will use the schedule to manage and analyze changes that occur in the dynamic field environment as well. During construction phase activities, Scott McDonald, Levi Dyess and CJ Kukus will develop the CPM and will be tasked with tracking performance and forecasting the remaining work. If potential schedule impacts are identified on key risk items, we will have recovery scenarios predefined.

Preconstruction manager Merle and Estimator Cody Holland will be at the ready to examine alternate strategies using best practices that are in concert with stakeholder and any other interests and concerns. We will plan the project using a Work Breakdown Structure that incorporates design and construction activities into distinct and several work categories. A fully functional baseline schedule is a powerful tool for evaluating "what-if" scenarios, identifying potential critical paths, prioritizing submittal and fabrication activities, and communicating significant dates and milestones to stakeholders. Our schedule certainty is enhanced by our ability to self-perform work critical to the project success or that is on the critical path. This approach allows Buildings By Design to better control the overall project schedule and ensures that key project elements are constructed according to the highest expectations and standards.

Scope Resolution and GMP Creation: Buildings By Design will participate in estimating reviews with Johnstown Police Department and D2C Architects to discuss assumptions, risk amounts, allocation of risk, and negotiate IGMP (Initial Guaranteed Maximum Price). With Key Principal oversight our team will create a cost model. Merle and Cody will lead the Estimating Team in developing and submitting the contract construction price including direct costs, risk contingency, and fee. Through an open book negotiation process, Buildings By Design will share our detailed cost breakdown of our production rates, quantities, crew sizes, work shifts, labor rates, equipment rates, material prices, and subcontractor prices. Our team, led by Merle will start negotiating the final GMP at final design after the following: all alternative methods of performing the work under the Subcontracting Plan have been discussed, the DBE plan is reviewed and approved, and all alternative value engineering methods based upon the 90% design have been incorporated.

Partnering: Collaboration and partnering with key stakeholders, including the client (Johnstown Police Department), D2C Architects, engineers, and subcontractors, will be encouraged throughout the project. Open communication channels and a cooperative environment will foster a more efficient and successful project delivery.

Project Contingency: A contingency fund will be established to account for unforeseen events or changes in project requirements. The control and use of the contingency funds will be managed through a predefined procedure developed in coordination with the Town of Johnstown PD. Requests for the use of contingency funds will require proper justification, ensuring transparency and accountability.

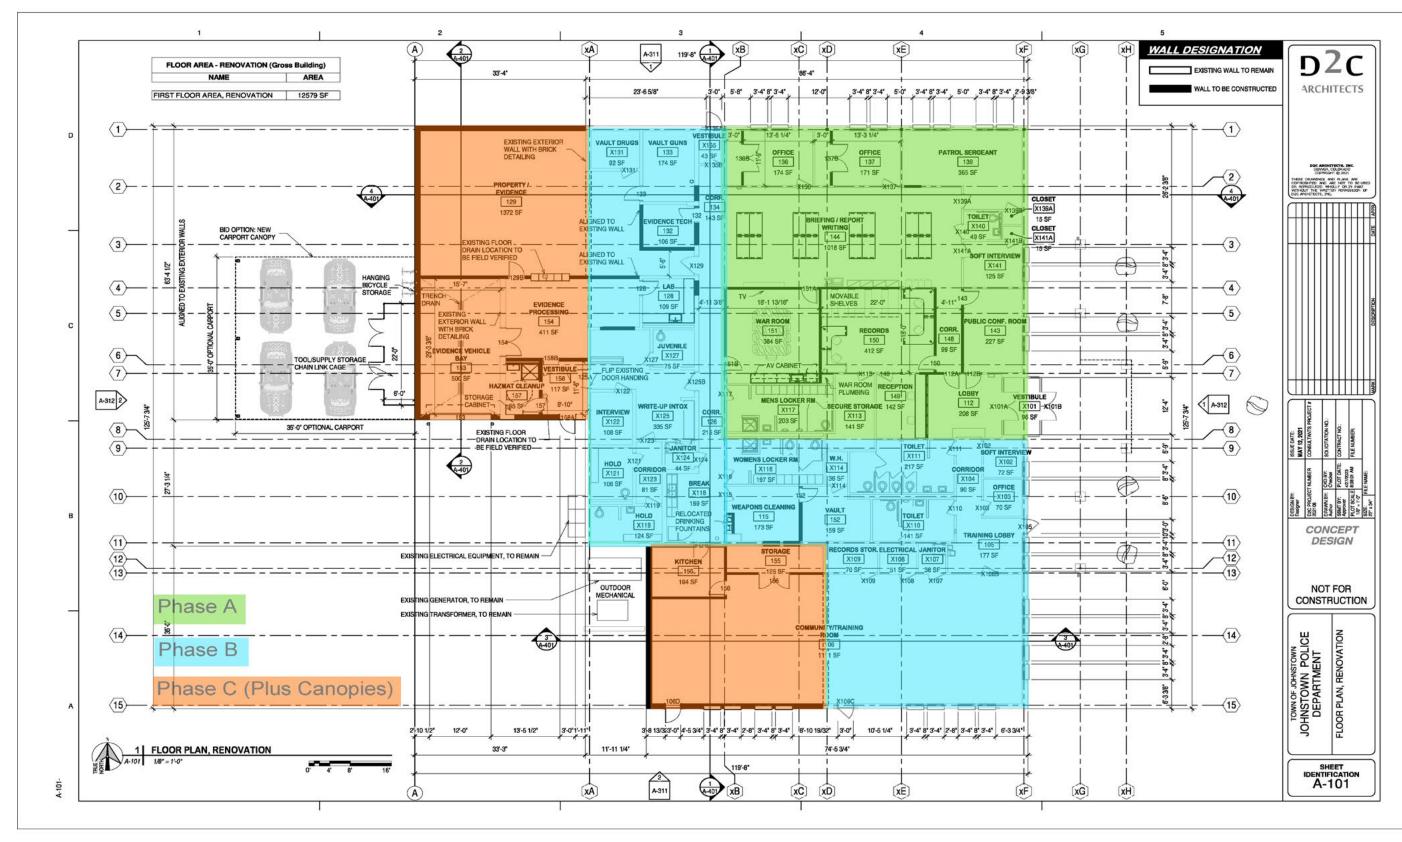

Comments and Suggestions on Contract Documents: Building By Designs has reviewed the proposed Contract Documents provided by the Town and at this time we don't have any comments and suggested changes

Self-Performed Work vs. Subcontracting: Building By Designs will determine the percentage and scope of work that can be self-performed based on the company's expertise, resources, and available bandwidth. The remaining elements of work will be subcontracted out to qualified subcontractors, ensuring that they meet the necessary qualifications, licenses, and insurance requirements. We anticipate self performing multiple scopes, however we will competitively bid all scopes to ensure that the Town of Johnstown recieves the most competitive pricing.

Building Subcontractor Capacity and Sustainability: Subcontractor selection is an important part of Buildings By Design process and a key component to this project. Project Manager CJ Kukus, Merle and Cody will directly oversee and manage subcontracts, with the focus being to identify opportunities relevant to and manageable for qualified local workforce and DBE participation. To achieve these goals, we use an early action approach that begins in preconstruction, and we rapidly develop a competitive subcontractor field by using the following strategies:

- Incorporating ongoing preconstruction-phase design, constructibility and innovation efforts to develop iterative and final procurement trade packages, including any self-performed packages that are clear, detailed and complete;
- Defining a scope of work description for each package to ensure "same-page" understanding between the design and construction intent;
- "Right sizing" bid packages to encourage subcontractor participation;
- Developing a sequence and schedule for trade bid package procurement;
- Advertising packages easily with sufficient time for all levels of subcontractors to participate; and
- Validate the qualifications and assess the expertise of subcontractors and certified DBE subcontractors/suppliers to determine if they are capable of performing the scopes of work identified in the contract.

JOHNSTOWN POLICE DEPARTMENT ADDITION AND RENOVATIONS PHASING PLAN

Certificate of Good Standing

OFFICE OF THE SECRETARY OF STATE OF THE STATE OF COLORADO

CERTIFICATE OF FACT OF GOOD STANDING

I, Jena Griswold, as the Secretary of State of the State of Colorado, hereby certify that, according to the records of this office,

Buildings by Design, LLC

is a

Limited Liability Company

formed or registered on 09/14/2004 under the law of Colorado, has complied with all applicable requirements of this office, and is in good standing with this office. This entity has been assigned entity identification number 20041320113.

This certificate reflects facts established or disclosed by documents delivered to this office on paper through 05/28/2021 that have been posted, and by documents delivered to this office electronically through 06/02/2021 @ 09:06:05.

I have affixed hereto the Great Seal of the State of Colorado and duly generated, executed, and issued this official certificate at Denver, Colorado on 06/02/2021 @ 09:06:05 in accordance with applicable law. This certificate is assigned Confirmation Number 13210484

Duswall

Secretary of State of the State of Colorado

Notice: A certificate issued electronically from the Colorado Secretary of State's Web site is fully and immediately valid and effective However, as an option, the issuance and validity of a certificate obtained electronically may be established by visiting the Validate a Certificate page of the Secretary of State's Web site, http://www.sox.state.co.us/hi_CertificateSecretCriteitu.do entering the certificate's confirmation number displayed on the certificate, and following the instructions displayed. Confirming the issuance of a certificate is merely optional and is not necessary to the valid and effective issuance of a certificate For more information, visit our Web site, http:// www.sox.state.co.us/click "Businesses, trademarks, trade names" and select "Frequently Asked Questions."

» Project Team: Resource Committment, Capabilities & Experience

Staff

Scott McDonald | Superintendent. We are proposing Scott, for the Johnstown Police Department Project. Scott has extensive CM/GC experience in supporting multiple clients with projects of similar scope and complexity to your project. He has over 40 years of commercial construction experience and we feel that with his previous experience especially with EMS Buildings fit nicely for your project. His responsibilities will start with coordinating and management of all on-site construction activities as well as work with the project teams to successfully deliver the project on time and budget with exceptional quality. He will ensure that all required materials, equipment, and inspections occur in accordance with the construction schedule for timely delivery. He is also responsible to ensure that the job site is a safe for workers and visitors and manage compliance with our safety policy. He manages the overall project and 3 week look ahead schedules to ensure that subcontractors complete their scope within the specified time to meet schedule compliance. Scott will also provide support during preconstruction to ensure transparency, constructibility reviews and overall operational support of the project.

Levi Dyess | General Superintendent | Assistant Safety Manager. Levi will support the project teams with general oversight and support for the Project. With over 25 years of experience, Levi will ensure that the project receive the full attention of all field staff; support preconstruction activities and ensure deliverables are met with accuracy and efficiencies.

Merle Grauer | Preconstruction Manager. Merle has provided preconstruction services for an array of clients, both public and private. He is knowledgeable in all phases of construction, from pre-design to post-occupancy. Merle's experience includes new construction, renovation, and extensive transportation facility projects. In addition, he has a strong understanding of the construction process, including cost estimating, value engineering, scheduling, and project management.

Merle's goal is to ensure that the preconstruction team develops the GMP while providing multiple pricing options throughout the different phases of the project. This will allow the client to have a clear understanding of the project cost from the beginning, and avoid any surprises during construction.

Cody Holland | Estimator LEED® Green Associate[™]. Cody will work with our estimating team to develop and price

design solutions, materials and assist with sequencing. He will help support Merle to provide quick and accurate valuation of options, innovations, constructibility and any possible value engineering concepts. Cody will also help lead efforts to help provide building efficiency and incorporate green building principals. Cody is an attentive, detailed oriented individual that will help deliver cost efficiencies throughout the estimating and preconstruction stage of the project.

Travis Lefever | Principal In Charge | Project Executive.

Travis has over two decades of experience delivering various project delivery methods and excels in value engineering (VE) analysis to create cost savings for clients. In his role as Project Executive and Principal In Charge, Travis is responsible for maintaining collaboration and communication among the team. He also works closely with Merle during design phase to ensure efficiency & constructibility reviews are being met. Travis strongly believes that every project presents a unique opportunity and strives to ensure each client's vision is captured through the design process.

Travis has a long history of delivering quality projects on time and on budget. He has a deep understanding of the construction process and is always looking for ways to improve efficiency and save his clients money. Travis is a strong advocate for collaboration and communication among all members of the project team. He believes that every project presents a unique opportunity to capture the client's vision and bring it to life through the design process.

Cj Kukus | Project Manager. CJ will be the primary point of contact during the construction phase of the project, he will help support the design and preconstruction team to evaluate the plans for constructibility and will facilitate the sequencing of the construction scheduling and procurement aspects of the project. As the project manager CJ will have overall project responsibility and will establish the overall project plan including budget management, phasing, site logistics, and schedule. CJ will monitor the status of all project deliverables: shop drawings, submittals, samples and other required project documentation.

Our proposed team is dedicated to the success of your project and is committed throughout the lifespan of the project.

Key Personnel

NAME & ROLE

Travis Lefever Managing Member Project Executive

Merle Grauer Preconstruction Manager

CJ Kukus

Senior Project Manager

- Coordination with Preconstruction management team for constructibility reviews
- Proper planning to ensure project tasks and timelines are set up for success
- Provide proactive risk management plan to ensure roadblocks are removed.
- Manage relationships with all stakeholders by accurately and effectively communicating the progress and overall health of the project.
- Work with Preconstruction teams to establish overall plan including budget, phasing and site logistics.
- Monitor status of all project deliverables: shop drawings, submittals and Procore management

Levi Dyess General Superintendent

- Ensure safety standards per company Best Practices and OSHA standards are implemented at job-sites and that on-site leadership is enforcing it
- Communicate to Estimating Team, Project Managers, and others of opportunities for constructibility reviews, schedule acceleration or potential delays.
- Managing field leaders such as Superintendents, Foreman, and other site leads
- Oversight & implementing project quality standards for the project and ensuring installation Best Practice Systems are being upheld

Scott McDonald Superintendent

- Coordination with Preconstruction management team for constructibility
- Establish lay-down perimeter and safety plan
- Primary point of contact for field teams
- Planning, organizing and management of day to day operations.
- Creation and management of baseline and all look-ahead schedules
- Management and Supervision of all daily on-site tasks and subcontractors
- Completion of job safety responsibilities, including weekly "toolbox talks"
- Coordinate, facilitate and participate in weekly OAC Meetings

PRIMARY PROJECT RESPONSIBILITIES

- Leads the development of milestone estimates and GMP proposals in collaboration with preconstruction teams, the design team and the Town of Johnstown
- Works with the Project team to develop and price, design solutions, materials, and sequencing
- Provides quick and accurate valuation of options, innovations, constructability, and VE concepts
- Leads estimate preparation and directs estimating staff, coordinates subcontractor estimates
 - Coordination with Preconstruction management team for constructibility reviews
- Proper planning to ensure project tasks and timelines are set up for success
- Provide proactive risk management plan to ensure roadblocks are removed.
- Manage relationships with all stakeholders by accurately and effectively communicating the progress and overall health of the project.
- Lead Preconstruction teams to establish overall plan including budget, phasing and site logistics.

Safety

Our entire team fully understands the importance of maintaining site safety and security on the project site is of the utmost importance to ensure that all personnel have a safe working environment. Below are the elements of our safety plan implemented in 100% of our projects.

Establish a Safety Culture. Safety is a top priority for all employees, subcontractors and support staff. We know that establishing a safety culture requires a topdown approach. "Safety First" really isn't just lip service. Our committment to safety is incorporated into our core principles of our company culture. This is evident by our EMR and TRIR rates where we have been continually below the industry standard throughout our tenure. Simply put, our record doesn't show "lip service" it provides real results and positively impacts 100% of our projects. TRIR rates are included in the table on page 11.

Creation of a Site Specific Safety Plan. Understanding that every construction project is different and comes with it's own unique set of challenges and obstacles. Proper Planning is considered a vital task in a successful management of project through completion.

The Construction planning process begins with a site-specific safety plan. We start by fully inspecting the site and determining what potential hazards may already exist. Plan out what safety measures should be implemented to mitigate those hazards and will prevent accidents.

As our construction plan is created we review each phase of the project and break down the individual tasks involved and assembly what safety measures, personal protective equipment (PPE) and training will be required of our subcontractors and other project staff to ensure we keep all workers safe.

We will then ensure that the plan is shared with all team members and emphasize that there is an expectation that everyone is to follow the plan.

Ongoing Training. Once the plan is built and administered, we fully understand that training doesn't stop there. We stand firm in that ongoing training helps ingrain the safety culture into the minds of all employees.

We conduct an initial safety orientation for all employees, subcontractors and other project staff to fully review all expectations and safety requirements including necessary evacuation procedures, and first aid plans. Workers are trained on how to complete the task correctly, and how to perform that task safely to protect themselves and others around them.

Speak Up & Hold Others Accountable. Every person on the job site knows that they should feel comfortable speaking up when they observe an unsafe working condition. Regardless of whether the worker is a construction worker, safety manager, construction labor etc., they have the ability to order work stopped if they feel that there is a safety issue that needs addressed. Our team emphasizes that all workers are responsible for keeping themselves and others around them safe.

Weekly Safety Meetings. The importance of safety starts with talking about it often. Daily safety inspections are routine with our field staff. Before the daily activities start, our superintendent reviews the work being done that day and discusses the hazards involved and the safety measures and controls that are in place if needed. After identification of the safety measures for daily activities there is a consistent review of any instances where workers may have not been following safety protocols and also including celebrating instances of where workers were observed working safely. Each employee is expected to review their PPE, tools and equipment before beginning daily activities to ensure everything is in good working order. Weekly "tool-box" talks occur to continue to reiterate safety measures and review of activities and adjusting plans for when there may have been an opportunity for improvement.

Inspect, Evaluate and Adjust. Site inspections are done daily. Equipment and tools are inspected to ensure all guards and safety controls are in place. Items like scaffolding and ladders are inspected to confirm good working order and safe to use. The site is clean and wellkept to avoid tripping hazards over tools and discarded materials.

As the project progresses our safety manager and field team evaluate the current safety plan and discuss what measures are working and what areas that may need to be addressed and any additional training needed. At that point the safety plan is adjusted as needed when work conditions may change.

Some Of Our Key Components To Our Safety Plan Include.

- We exceed OSHA standards. This includes 100% tieoff for steel erection activities. We also require hard hats 100%, safety glasses, hi-visibility vests, and steel-toed boots.
- Every BBD project manager and field associate has OSHA 10 and/or 30-hour training.
- Each Trade Contractor is evaluated by our Safety Manager as part of our pre-qualification process. Contractors with an inadequate safety plan or poor records will be deemed unqualified, and not considered.
- Our Safety Director will audit the project site periodically to ensure work is being completed in compliance with our Safety and Health Program, as well as conducting safety pre-starts for each critical job site activity.
- Substance-Free Workplace Policy: BBD is committed to providing a safe work environment and fostering the well-being and health of its employees. That commitment is jeopardized when any BBD employee or contractor's employee uses controlled substances or illegal drugs in the workplace. Therefore, we take this very seriously and any violators of the policy will be removed from the job-site and disciplined accordingly.
- Safety Recognition Program (SRP): We encourage our associates to go above and beyond when it comes to safety. Our program takes a proactive approach to preventing injuries, increases communication between field/office, encourages near miss reporting, and boosts our safety culture.

Our Commitment To Safety Includes The Following Fundamentals

- Strong emphasis on safety training
- Job Hazard Analysis of routine jobs, tasks, and processes.
- Site-Specific Training Orientation: this will inform the employees of site-specific hazards, emergency numbers, and evacuation procedures, as well as general safety regulations to be followed while onsite.
- Toolbox Talks performed weekly.
- Daily huddles with associates to review potential hazards and heighten safety awareness.
- Routine self-inspections: weekly documented site inspections are performed by each Project Superintendent with minimum weekly site audits conducted by the Safety Director.

- Pre-Installation Meetings: held with contractors prior to mobilization on site. The objective is to clearly communicate BBD's expectations and to coordinate activities.
- Job Safety Analysis held with the crew prior to the start of a work assignment or when conditions change that affect the safety of the work.
- Hazard Reporting System: All employees are required to report any and all hazards to their Superintendent immediately.
- Investigation of Accidents and Near-Misses: We investigate and determine the root cause of all incidents. Incident reports are shared with all employees following each investigation to create awareness and prevent future incidents.

Construction Sequencing and Scheduling

Our team follows a systematic approach to develop and maintain project schedules for Johnstown Police Department. The process involves several key steps and considerations to ensure efficient planning, coordination, and successful project execution. Below is a synpsis of how we create and manage construction schedules:

Project Initiation: We will initiate the process by gathering relevant information about project. This includes understanding the our clients objectives, reviewing project specifications, conducting site visits, and assessing any existing structures or infrastructure.

Scope Definition: We will collaborate with the client and design team to clearly define the project scope, identifying the specific renovations or additions required, as well as any associated constraints or limitations.

Task Identification: We will then break down the project scope into individual tasks and activities. Considering various aspects such as demolition, structural changes, plumbing, electrical work, HVAC installations, finishes, and any other components involved in the renovation or addition.

Task Sequencing: Once the tasks are identified, twe will then determine the order in which they need to be performed. Some tasks may be sequential, meaning they must occur in a specific order, while others can be done simultaneously or in parallel.

Duration Estimation: We provide estimates the time required to complete each task. This estimation takes into account factors such as labor requirements, equipment availability, material delivery times, and any dependencies between tasks. We also take into consideration of the expertise of personnel, historical data, and industry standards to make accurate predictions.

Schedule Development: Using the task sequencing and duration estimates, we will then develop a detailed project schedule. This schedule typically includes start and end dates for each task, as well as any milestones or critical deadlines.

Resource Allocation: We will assess all necessary resources, including labor, equipment, and materials, for each task and aligns them with the project schedule and

ensure that resources are allocated optimally to meet project the specific requirements and timelines.

Schedule Optimization: We will collaborate and review the initial project schedule to identify potential bottlenecks, conflicts, or areas for improvement. There may be areas to where we will need to adjust task sequencing, reallocate resources, or consider alternative approaches to optimize the schedule and maximize efficiency.

Monitoring and Control: Once the project is underway, our superintendent and project manager will closely monitor the progress of each task and compare it against the planned schedule. We track milestones, identify any deviations or delays, and implement corrective actions as necessary. Regular communication and collaboration with the client, subcontractors, and suppliers are crucial during this phase.

Schedule Updates: As the project progresses, CJ, Levi and Scott will update the schedule to reflect any changes, such as unforeseen circumstances, design modifications, or variations in client requirements. They communicate the updated schedule to all stakeholders, ensuring everyone is informed and aligned with any revised timeline.

Project Completion: Upon completion we will evaluate the final project schedule against the actual duration and performance. This will allow a post-project review to identify lessons learned, strengths, and areas for improvement in future projects.

Short Term Duration Schedules: Our project superintendent Scott will utilize Procore project manage suite to track and monitor overall construction activities. These activities include RFI's, Observations, Daily Logs, and schedule management. He will utilize two and three week look aheads that are shared to all project teams through Procore. This allows for real time collaboration and effecient schedule management. During weekly meetings and OAC meetings, these will be discussed to proactively identify any schedule gaps and or areas of how we may be able to accelerate the schedule for early completion.

On the following page, we have provided an example of a three- week look ahead schedule for a project of similar size.

>> Quality Assurance/Quality Control

Buildings By Design is committed to maintaining highquality standards throughout its construction projects. Here are the details on how we administer our quality control program during construction, documents performance measures, and addresses quality issues:

Quality Control Procedures: We have established comprehensive quality control procedures that outline the specific steps and protocols to be followed during construction. These procedures cover various aspects such as material selection, construction techniques, safety protocols, inspections, and testing.

Pre-construction Planning: Before the construction phase begins, our Preconstruction Manager and Superintendents and Project Manager conduct thorough pre-construction planning processes. This includes a review of project specifications, design documents, and quality standards. The purpose is to identify potential quality risks, develop strategies to mitigate them, and establish performance measures to monitor quality throughout the project.

Training and Education: Ensuring that all personnel are well-trained and educated on the quality control procedures. Project managers, superintendents, subcontractors, and on-site workers receive appropriate training to understand their responsibilities in upholding quality standards.

Performance Measures and Documentation: We will implement performance measures to assess and document quality during the construction process. These measures include inspections, tests, and other quality assurance techniques. The results of inspections and tests are recorded in Procore so that we can create reports, logs, and other documentation as necessary. This creates a comprehensive record of quality performance that can be tracked and measured against.

Inspections and Audits: Regular inspections and audits are conducted by our field site personnel to monitor compliance with quality control procedures, building codes, and regulations. These inspections occur at different stages of construction to identify any potential quality issues or non-conformances. **Non-Conformance Management:** If any quality issues or non-conformances are identified during inspections or audits; we will take immediate corrective actions. The non-conformance is documented, and a root cause analysis is conducted to determine the underlying reasons. Corrective measures are implemented to rectify the issue, and preventive actions are put in place to avoid similar issues in the future.

Continuous Improvement: Our team emphasizes continuous improvement in its quality control program. Feedback and lessons learned from previous projects, client input, and industry best practices are incorporated into the program to enhance quality performance over time. This ensures that the quality control program evolves and adapts to deliver even better results.

Client Communication: Its paramount to maintain open and transparent communication with our clients throughout the construction process. Clients are regularly updated on the progress of their projects and provided with reports and documentation related to quality inspections. Any identified quality issues are promptly communicated, along with the proposed corrective actions and timelines for resolution.

Our quality control program aims to ensure that construction projects meet or exceed the specified quality standards. By adhering to rigorous procedures, documenting performance measures, and promptly addressing quality issues, Buildings By Design strives to deliver high-quality buildings while meeting client expectations and industry regulations.

Re: Bonding Letter

<u>Buildings by Design</u> is currently bonded by Philadelphia Indemnity Insurance Company, and is an account in good standing. Philadelphia Indemnity Insurance Company is rated by A.M. Best as "A++" (Superior) and "XV" financial size. Philadelphia Indemnity Insurance Company is admitted to conduct Surety business throughout the United States with an underwriting limitation of \$304,546,000 assigned by the US Department of the Treasury.

We would favorably consider bonding individual projects of \$25,000,000 and an aggregate work program of \$50,000,000 for Buildings by Design.

We will consider specific requests for surety bonds based on our underwriting evaluation at the time of the request. Our underwriting evaluation includes our satisfactory review of contract terms and conditions and bond forms, verification of project financing, appropriate financial information as well as other underwriting conditions which may exist at the time of the request. Any request for bonds is a matter between <u>Buildings by Design</u> and Philadelphia Indemnity Insurance Company, and Philadelphia Indemnity Insurance Company assumes no liability to any party by providing this letter.
