Follow Up Flag: Follow up
Flag Status: Flagged

You don't need that 3 way valve, that was sent incorrectly with your project. Go ahead and set it aside, our tech can pick that up during start up.

Our servers are still down, so I've been unable to get in there since last week to work on anything, but the goal was originally to try and have that in your hands this week, it may push to early next week for the complete OMM.

I can send LOH instructions as soon as the server is up. IT is working through issues to get it online and have it stay up, they're hoping by EOD today we have full functionality and access to our drives.

Thank you,

Nina Halverson

Hello Nina,

I have another question. We are wondering where this valve in the picture goes. This is where the full IO&M manual is really needed. How are we doing on getting that to me? We also have to install the loss of head panel and I have no instructions for this either.

Hi Brian,

I am working to verify the date on the greensand, I did request it, but I have not gotten a confirmation with the holiday week. They have not sent that out yet.

But yes, they are from different companies so they will be separate deliveries.

Our servers are currently down so I cannot get into the drives to get letters out to you but as soon as they are up, I can do that for you. I also wanna verify I don't believe you need to test them 150 psi, I believe ASME was 130 but again as soon as I can get into the server files, I will verify that and let you know.

Thank you,

Nina Halverson

Subject: RE: [EXT]RE: Kurita Invoice for Kronenwetter

Hello Nina,

I need a couple things from you. I received a call from the trucking company and they will be delivering the gravels on 12-10. It sounded like he also had a second delivery of media he needed to schedule with me, likely for later in the week. And he also said he is going to be delivering the greensand from New Jersey, but that is not in yet. Have you been able to confirm the greensand will be able to be delivered on 12-16-24? I have All American Water Solutions set up to do the install starting 12-17-24.

The electrician onsite needs a Kurita technician to talk to regarding some wiring questions. Can we get a contact for a startup tech to see if he is able to resolve these issues?

I need a written warranty letter from you regarding the detention tank that was tipped on its side. I plan to perform a 150psi hydrostatic water test on it. If that test is performed and passes will that be satisfactory for Kurita to honor the original warranty of that tank? If that is acceptable to Kurita I need a statement stating that upon successful completion of a 150psi hydrostatic water test Kurita will honor the original manufacturer's warranty of the tipped detention tank. And this statement should be printed on Kurita letterhead and signed. This is short notice, but I would like this warranty letter by tomorrow as the village is holding a meeting tomorrow night where this will be a topic of discussion as well as discussing the delays of entire project. I may need your input on project delays as well so we can be given a contract extension.

Thank you,

Hello Nina,

I just spoke to Randy at All American Water Solutions and he is available the week of December 16th to install the media. He would likely start on the 17th or 18th. The gravels are being delivered on December 9th and the greensand is supposed to be December 16th delivery. Can you confirm these dates of delivery. This is really the only date that works for him to install the media and I don't want to miss this window. Then we could have startup on January 6th. And that would make the engineers and the village happier.

Thank you,

Emily/ Brian

See attached commissioning checklist, please complete to the best of your ability with dates or expected dates, and send back prior to end of business day on 11/27 to secure your start-up dates.

If we don't have this back there is risk of field service cancelling the reserved time, which is not what we want to have happen.

Thank you,

Nina Halverson

Emily –

I've worked with field service and they will be using the 1/6 week for overseeing the media install and disinfecting.

Then we will return the following week 1/13 to complete the start up and training.

Thank you,

Emily –

I've been in and out of office sick for the last week so my apologies for delay.

1. We don't have anyone sooner than 1/6 for a visit at this time, we can make that the media install visit. I will work with field service to schedule start up for as soon as possible after that week. I never received response from anyone on whether your team was working the holiday weeks, so I was not able to reserve any of that time.
2. Media Gravels will be delivered on 11/22– the greensand is delayed with the previous port closures will be delivered on 12/16. I've requested updates to ensure these are still the correct dates. The carrier will call ahead of delivery as well.
3. This is on my list for today – steps are still as outlined below.
4. I will upload to the folder below
5. Control panels are complete and shipping today, they should be onsite tomorrow, 11/20.

Thank you,

Nina Halverson

Subject: Re: [EXT]RE: Kurita Invoice for Kronenwetter

Importance: High

Nina,

Good morning. I tried calling you yesterday and this morning with no luck. We need a response today on the email I sent back to you on 11/12. Everything that needs to be addressed is highlighted in yellow. Even if you have partial answers, please send those our way. We need some kind of communication. We missed our window to get an extension on this project due to not getting these answers. There was a city hall meeting last friday and

Brian had nothing to give them to argue for the extension. Conversations have begun regarding liquidated damages. Just a heads up so you aren't caught by surprised.

I do apologize for having to be so direct. I'm just trying to make the situation very clear.

ORIGINAL EMAIL-----

1. What is the intent of the visit scheduled for January 6th? Is it to perform start-up? Or is for the media filling? Brian would like a Tonka representative to be on site for the media fill as called out in the scope of supply.
 1. We can plan for to oversee the media install during the trip on 1/6 if you will be ready for that. I don't know if we have time in December available still for a tech to be there for a day or so to oversee, if we do it will likely be the short holiday weeks of Christmas and New Years. That would be enough time to oversee the media install and then would allow time for your team to complete the soak/disinfection and any Bac-T testing that is needed before start up, which would then allow them to complete start up the week of 1/6. Let me know if your team is working those weeks and I will see if we have time on the schedule for either of them.
 1. WR RESPONSE 11/12: Please move forward with trying to schedule a tech to oversee the media install. Once you have an update on this front, please let us know as soon as possible
2. Please release the media as soon as you have confirmed the quantity. Please provide us with an email once released. Brian needs to know when the lead time clock starts ticking.
 1. Media was released a bit ago, is there a date you'd like it delivered? Initially I told them mid-November, as I can always have them hold it easier than I can have them bump it up. I will check on this and verify we're still set to go.
 1. The media can be received at any time. Rohde Brothers would prefer that it is delivered somewhat close to the time the media installation technician is on site.
3. When you get a moment, can you please walk Brian through how the remainder of this project will go? (how many visits, when to expect documents, start-up checklists, readiness calls, etc). I think this would be very beneficial for everyone involved.
 - i. Yes, I will call Brian and walk through with him, but essentially next steps are getting media to site and installed when you're ready, at that point we would have you walk through the start up checklist and verify all components are installed, everything is wired and plumbed and that all disinfection processes and tests are completed. Once that is complete then we can complete start up. We would have 2 visits based on current information, 1 to oversee the media installation which would be 2 days, then we'd have a return visit to complete the start up, if we can do media install during one of the holiday weeks in December, start up can be the week of 1/6. This

would be generally 3-4days on site and include the NES walking through all items, processes and complete training with operators onsite.

1. Brian has yet to receive a call from you.

4.

5. I know that the O&M is a little bit way out, but can you please provide information that would be helpful while the filters are being installed? For example, what is expected to be done before the media can be loaded? Does the tank need to be chlorinated before and after media installation? You indicated on 10/31 that you had field assembly documents and instructions. Have you had a chance to send those files over?

1. Yes, I will send those again for you, they're a larger PDF and I'm finding they get stuck in space sometimes. They outline the field assembly portions, the media install procedures and the complete disinfection process for you step by step. I will also include the commissioning checklist for review as you work through install.

i. To help aid in the delivery of these files, please place them in the linked folder below. Everyone on this email chain has access to this folder and can edit the contents. Brian can download them from here.

ii. [Important Files](#)

5. Do you have an update on the status of the control panel? We are starting to risk the electrian not having enough time to insall and wire this.

Subject: RE: [EXT]RE: Kurita Invoice for Kronenwetter

Hello Nina,

Nina,

Thank you for replying. I'm going to need good support from you to get this project done and ready for January 6th startup. The startup cannot slip with all of the delays we have already had in receiving. In response to your emails,

- I don't care if we don't know for sure who the actual startup technician is. I want somebody to talk to that is familiar with these systems so if I have questions during install I have someone. I also want to ask them if there are any common problems on startup day that we can avoid. And most importantly please make sure they are competent. I've been through some recent startups on expensive and technical equipment that went terrible because of incompetence. I recently had to wait for an expert from Australia that was useless. That is blunt but I want to get my point across.
- If there is a checklist for prior to startup, please get that to me.
- We need to schedule the media delivery now if they are 3-4 weeks out. Please verify quantities and lets get this set up. I can make the next available date work.
- I keep bringing up the installation and operation manual, but we are installing it now and should have this already. Is this a few days out? Or longer?
- Give me a date for the panel delivery as soon as you can. I will make sure we are there to receive. I'm getting the most heat from the GC, electrician, and engineer on this panel.
- For the dropped tank. We will take pictures. There is no apparent physical damage that can be seen. The engineer is not going to be happy with just a visual inspection. My plan is to do a hydrostatic pressure test to 150psi, have it witnessed by a third party and have the third party sign an inspection and test form. I will then pass the form on to you to sign stating you acknowledge the third party test and the warranty is not affected. Does that sound reasonable?

Thank you,

I don't know which tech is assigned for your visit in January yet, so I don't have a contact to share, but will do so as we near that date and it's assigned to someone.

I will follow up with media and disinfection information in another email, I'm working to verify the quantities before sending – we don't usually send this until media has been ordered and amounts are verified as it can shift the amounts needed to charge and disinfect.
Do you have a date you'd like the media delivered? We usually need 3-4wks lead time on this to ensure timely delivery.

Thank you,

Nina Halverson

I had a few discussions with fabrication about the vessel that was dropped today, if there is no visual damage, no cracking, all seams and welds are intact and not disturbed they don't see any need to come back out and reinspect or certify the vessel again.

I'd advise to get some more photos of the seams, verify nothing internally is moving around or shifted and should be fine.

The photos are of your blower housing/surround enclosure.

The control panel hasn't shipped yet, I've requested an update on that from the programmer, there were a few things that needed some rework during checkout, but those should be resolved this week so it can be shipped.

Nina,

Good morning. I wanted to follow this morning that in addition to the answer about the tipped tank, we do still need answers for the email Brian sent on Thursday. Just want to make sure his requests don't get lost in the email chain. Please give us an update on the highlighted items.

1. The deliveries were received on Monday the 28th. Everything appears good so far. There are still boxes we have not opened. The four small vessels appear to have been stored outside as they are quite dirty and the paint appears quite faded compared to the large vessel. We will be taking pictures. I do not know if this is an issue yet, but wanted to mention it.
2. We did not receive the control panel. When will this arrive?
 - a. Attached are three pictures of another electrical box. Can you tell me what it is for?
3. I need the IO&M manual as soon as possible.
 - a. If that does not contain instructions on filling the media, send those separately. I want to review those instructions and set up the delivery in the next couple of weeks.
4. I want a phone number of a startup technician to talk to discuss the startup process to be sure we are ready for January 6th.
5. Are there any special instructions on chlorinating this filter system?
6. What needs to be done to confirm the tipped tank is still intact and warrantied?

Thank you!!

Emily Nurmi (she, hers, her)

Nina,

I forgot another important question. Our foremen had an accident while trying to lay down one of the small vessels. The four tanks were stood upright outside with the crane but were too tall to move in the building this way so he had to lay them back down. He was using a forklift for this and while tipping one of them down the weight of the tank pushed on the forklift sideways because he was not straight on with the tank. The forklift tipped on its side the tank tipped onto its side also. The engineer was notified of this and is looking for recommendations from Kurita if any testing needs to be done to be sure nothing was damaged and so the warranty is not affected. It did fall freely from about a 60 degree angle. It fell onto a sandy grassy area. We can perform a pressure test and have it witnessed by a third party inspector. If you can send instructions of what Kurita would like done to satisfy that there is no damage. I need to forward that to the engineer. Thank you.

Brian –

Good morning – the smaller vessels were stored inside, but were there and complete for quite some time, also – not finished coated as that is not our scope, but all should be primed and ready for final clean up and finish coat of paint.

Please still send photos.

I will verify the status of the electrical panel and have that sent if not already on route.

I will send field assembly and instructions and am still finalizing the OMM, but will also get that to you.

Thank you,

Nina Halverson

Hello all,

I have not received a call from the trucking company yet with the main filter vessel. Can someone please confirm they are on schedule for today and an ETA. On a delivery this size and with special unloading requirements I always receive a call from the trucking company to be sure we can offload. No call is making me nervous. I did receive a call from the driver with the four smaller vessels on Friday. He should be there at 8am. I will reply if they happen to arrive.

Yes Nina, please put us down for January 6th.

And please follow up with the O&M manual and the media filling instructions. The specs call for a factory representative to be onsite during the filling process. Is this something you typically do or not? How much notification do you need for the media delivery?

Brian –

Right now, with holidays and a full NES calendar the soonest we have open is the **week of Jan 6th, 2025**. I will have them put you on the calendar for that week and if we have anything open up sooner we can move you as able.

If we get to December and you don't think we'll hit that let me know as soon as possible so I can try and get you in there for the next open week.

Thank you,

Subject: RE: [EXT]RE: Kurita Invoice for Kronenwetter

Good morning –

I've been able to confirm that delivery on 10/28 is secured. They are going to aim to be there as close to the 7am mark as possible, this could delay if we run into oversized road restrictions for any reason, but the carrier will be in contact as they are on route with estimated times. They are aware they will need to call in advance to ensure proper staging and delivery order as well since we will be delivering 4 vessels in total that day.

The carrier is still currently lined up to delivery components and facepiping next week on the 23rd, please let me know if this will not work. A crane is not needed to unload these items, a forklift or similar will be needed but that is it. A pallet jack would also work, though not as easy.

Please let me know if there are any other concerns or questions.

Thank you,

Nina Halverson

Hello Emily and Nina,

We need to confirm an onsite delivery date. The general contractor is pushing, but I need this as well. I have a crane and equipment moving company onboard to unload the filter, but if I am not

given enough notice I can't promise we will be able to unload it. Last ship date I heard was October 14th. I am currently setting up for receiving on the 21st. I will need a contact for the trucking company or they will need to contact me. Will this equipment all fit on one truck? Once I know the first delivery we can set up for the media delivery.

I need to know availability for startup services and to get that scheduled now to assure a spot.

I'm also looking for specific instructions for putting the media in.

Please reply by October 2nd.

Nina,

Good afternoon. Do you have an update on when these filters will ship? Based on your last email, it looks like they will ship on 10/7. You mentioned that a week before the ship date they usually hit paint and final inspections. Can you confirm this they have hit this stage yet?

Thank you,
Emily

Brian –

Our fabrication team has a meeting tomorrow, but as of this morning the current ship date looks like it will be 10/7.

I will follow up with you if that date has changed when we have the meeting tomorrow.
I can keep you posted as the vessel hits paint and final inspections – this is usually a week before they would be looking to ship so this can help align the crane delivery to offload all vessels.

Thank you,

Nina Halverson

Emily and Nina,

I am going to need a confirmed ship date and the actual date this will arrive to the site very soon. I'd like a date by next Wednesday the 18th. I need to get a crane reserved as soon as possible. Thank you.

Brian/Emily –

Good morning!

I have a short update on the vessels here. We have the vertical pressure filters complete and ready to ship.

The Fab shop has faced a number of issues with storms and is quite delayed on the horizontal filter, the update that was provided was mid-end of October now – I am working to bring this timeline in and working with them to get this sooner so hopefully I have a better date for you next week.

Given this update, did you still want the VPF's held until the horizontal is complete or would you like to take delivery of those sooner?

Attached are photos of the finished vertical vessels.

Thank you,

Nina Halverson

Hello Nina and Emily,

I would still take some photos of the vessels for billing purposes. And the main thing, we are now within one month of delivery, and I need to start setting up a crane and equipment to receive this equipment. I am going to need a hard delivery date very soon, mainly to reserve a crane. Let me know as soon as possible.

Hello Emily and Nina,

Can you please provide me with some photos of materials being used and progress photos. I need to send these in order for us to continue receiving payments.

Brian,

I passed this information along to Nina at Kurita. She is working on getting these photos for you.

Please let me know if you need anything else

Emily,

We received this invoice from Kurita. It looks like this is for a portion of the materials. I will be putting this amount on our next pay app for the project that goes out the 20th of every month, but I will likely be needing some photos of materials for us to get this approved. And being that these materials are not in my possession or onsite I'm not sure they will approve payment until delivery. Lets at least start with some photos. If you can give me some advanced notice of any other large invoices coming we can ask for that payment sooner.
