RE: Emergency Update of Spill Prevention Control & Countermeasure plan (SPCC)

We had an FDEP compliance inspection on 1/29/24 and was notified that our SPCC needed to be updated. The SPCC is a comprehensive plan used to prevent, control and act on any chemical spill in the plant such as diesel or sodium hypochlorite. FDEP is giving us until 2/19/24 to have the plan updated. The plan has to be signed and sealed by an engineer. I have contacted Mittauer and received the attached proposal of \$6,500 to do the update by the deadline. This will come out of account 410.74.536-030.31 (Engineering Services) Please approve this as an emergency.
