TPS Review ..... 6
AM/PM Peak Hour Traffic. .....  7
Conclusion .....  8

## Introduction

This is intended to be the site of a proposed Commercial and Office/Warehouse facility located on the north east corner of Lake Worth Road and Boutwell Road, The site will have two entrance exits onto Boutwell Road. This site is located in Lake Worth Beach.

Proposed site plan for this site identifies the following planning data:

- Building 1 - Office/Warehouse .............................................................................. 6264 sf 1566 sf office/4698 sf Warehouse
- Building 2 - Commercial/Retail....................................................................... 5312 sf

5312 sf Commercial/Retail

- Building 3 - Commercial/Retail...... ................................................................ 4892 sf.. 4892 sf Commercial/Retail

TOTALS:
1566 sf office/4698 sf Warehouse
10204 sf Commercial

General Planning Data:

- Property Control Number ................................................................................ 38434420011170020
- Size ................................... ........................................................................................................ 1.8 acres
- Address................................. .............................................................................. 2022 Lake Worth Road
- Municipality .............................................................................................................. Lake Worth Beach

## Purpose

The purpose of this study is to review daily and peak hour traffic from the site. Traffic from the AM peak hour and the PM peak hour will then be reviewed for compliance with Palm Beach County's Traffic Performance Standards.

LOCATION MAP

Proposed Daily Traffic Generation

| Land use | Intensity/Gross Trips | Generation Rates | Passby | Net External Trips |
| :--- | :--- | :--- | :--- | :--- |
| Office | 1566 square feet <br> 25 gross trips/day | ITE Code 712 <br> $16.19 \mathrm{t} / 1000 \mathrm{sf}$ | $-10 \%$ | $23 \mathrm{t} / \mathrm{d}$ |
| Warehouse | 4698 square feet <br> 8 gross t/day | ITE Code 150 <br> $1.74 \mathrm{t} / 1000 \mathrm{sf}$ | $-10 \%$ | $7 \mathrm{t} / \mathrm{d}$ |
| Commercial | 10204 square feet <br> 1273 gross t /day | TE Code 820 <br> $\mathrm{Ln}(\mathrm{T})=.68 \mathrm{Ln}(\mathrm{X})+$ <br> 5.57 | $-62 \%$ | $489 \mathrm{t} / \mathrm{d}$ |
| Totals | 16468 sq ft <br> 1306 gross trips/day |  |  | $519 \mathrm{t} / \mathrm{d}$ |

Proposed AM Peak Hour Traffic

| Land use | Intensity/Gross Trips | Generation Rates | Passby | Net External Trips |
| :---: | :---: | :---: | :---: | :---: |
| Office | 1566 square feet 3 gross $\mathrm{t} / \mathrm{hr}$ $83 \%$ in/ 18\% out 2 in/ 1 out | $\begin{aligned} & \text { ITE Code } 712 \\ & 1.92 \mathrm{t} / 1000 \mathrm{sf} \end{aligned}$ | -10\% | $\begin{aligned} & 3 \mathrm{t} / \mathrm{hr} \\ & 2 \mathrm{in} / 1 \text { out } \end{aligned}$ |
| Warehouse | 4698 square feet 1 gross t/hr $77 \%$ in/23\% out $1 \mathrm{in} / 0$ out | $\begin{aligned} & \hline \text { ITE Code } 150 \\ & 0.17 \mathrm{t} / 1000 \mathrm{sf} \end{aligned}$ | -10\% | $\begin{aligned} & \hline 1 \mathrm{t} / \mathrm{hr} \\ & 1 \mathrm{in} / 0 \text { out } \end{aligned}$ |
| Commercial | 10204 square feet 10 gross t/hr 62\% in/38\% out 6 in/ 4 out | ITE Code 820 . 94 t/1000 sf | -62\% | $\begin{aligned} & 4 \mathrm{t} / \mathrm{hr} \\ & 2 \mathrm{in} / 2 \text { out } \end{aligned}$ |
| Totals | 16468 sq ft 14 gross t/hr $9 \mathrm{in} / 5$ out |  |  | $\begin{aligned} & 8 \mathrm{t} / \mathrm{hr} \\ & 5 \mathrm{in} / 3 \text { out } \end{aligned}$ |

Proposed PM Peak Hour Traffic

| Land use | Intensity/Gross Trips | Generation Rates | Passby trips | Net External Trips |
| :---: | :---: | :---: | :---: | :---: |
| Office | 1566 square feet 4 gross t/hr $32 \%$ in/ 68\% out 1 in/ 3 out | $\begin{aligned} & \text { ITE Code } 712 \\ & 2.45 \mathrm{t} / 1000 \mathrm{sf} \end{aligned}$ | -10\% | $\begin{aligned} & 3 \mathrm{t} / \mathrm{hr} \\ & 1 \mathrm{in} / 2 \text { out } \end{aligned}$ |
| Warehouse | 4698 square feet 1 gross t/hr $27 \%$ in/ $73 \%$ out $0 \mathrm{in} / 1$ out | $\begin{aligned} & \hline \text { ITE Code } 150 \\ & 0.19 \mathrm{t} / 1000 \mathrm{sf} \end{aligned}$ | -10\% | $\begin{aligned} & 1 \mathrm{t} / \mathrm{hr} \\ & 0 \mathrm{in} / 1 \text { out } \end{aligned}$ |
| Commercial | 10204 square feet 100 gross $\mathrm{t} / \mathrm{hr}$ $48 \%$ in/ $52 \%$ out 48 in/ 52 out | $\begin{aligned} & \text { ITE Code } 820 \\ & \operatorname{Ln}(\mathrm{~T})=.74 \operatorname{Ln}(\mathrm{X})+ \\ & 2.89 \end{aligned}$ | -62\% | $\begin{aligned} & 38 \mathrm{t} / \mathrm{hr} \\ & 18 \mathrm{in} / 20 \text { out } \end{aligned}$ |
| Totals | 16468 sq ft 105 gross t/hr 49 in/ 56 out |  |  | $\begin{aligned} & 42 \mathrm{t} / \mathrm{h} \\ & 19 \mathrm{in} / 23 \text { out } \end{aligned}$ |

East/west AM Roads - peak hour traffic distribution

| Road laneage/\% project dist. | Link/LOS Capacity | Project traffic |

Radius of Development influence is $\mathrm{I} / 2$ mile.

## TPS Review

Net traffic for the proposed use during the AM peak hour is $5 \mathrm{v} / \mathrm{hr}$ for entering traffic and $3 \mathrm{v} / \mathrm{hr}$ for exiting traffic. Net traffic for the proposed use during the PM peak hour is $19 \mathrm{v} / \mathrm{hr}$ for entering traffic and $23 \mathrm{v} / \mathrm{hr}$ for exiting traffic. Both the AM traffic and PM traffic shows project impact of less than $1 \%$ of the level of service volume for the surrounding roadways.

## Site Related improvements

The intersection of Boutwell Road and Lake Worth Road is controlled by an existing traffic signal.
The north approach of this intersection has an existing 285 foot left turn lane and a existing 285 foot right turn lane.
The south approach of this intersection has an existing 240 foot left turn lane.
The east approach of this intersection has an existing 250 foot left turn lane.
The west approach of this intersection has an existing 240 foot left turn lane.
A review of the total am and pm peak hour volumes from the site are identified as 14 net AM peak hour trips and 105 net PM peak hour trips. As turning movements are relatively low, no additional turn lanes or improvements are recommended.

## Conclusion

Net traffic for the proposed use during the AM peak hour is $5 \mathrm{v} / \mathrm{hr}$ for entering traffic and $3 \mathrm{v} / \mathrm{hr}$ for exiting traffic. Net traffic for the proposed use during the PM peak hour is $19 \mathrm{v} / \mathrm{hr}$ for entering traffic and $23 \mathrm{v} / \mathrm{hr}$ for exiting traffic. Both the AM traffic and PM traffic shows project impact of less than $1 \%$ of the level of service volume for the surrounding roadways.

A review of the gross AM peak hour volumes from the site are identified as 9 AM entering peak hour trips and 5 exiting PM peak hour trips. A review of the gross PM entering peak hour volumes from the site is identified as 49 PM peak hour trips and 56 exiting PM peak hour trips. As turning movements are relatively low, no additional turn lanes or improvements are recommended.
