Jamie,

RE: 446173-1/SR-5 from south of 10th Ave South to 6th Ave North

Thank you for taking the time to discuss the mini-roundabouts along the SR5 project referenced above. As you know, I am the Design Project Manager for the above referenced project.

As discussed, the Department has determined that mini-roundabouts are not the best fit to address speed management along the corridor.

We would like to share with you some other already approved ideas and partner with you on some potential ideas (that need to be further evaluated) that we feel are a better fit to address speed management:

- The speed limit along this corridor within the project limits (south of 10th Ave South to 6th Ave North) will be changed to be 25mph upon the completion of the Resurfacing, Restoration, and Rehabilitation (RRR) job
- A new Rectangular Rapid Flashing Beacon (RRFB) crossing on the north side of SR-5/8th Ave South intersection will be installed with the RRR
- A new RRFB crossing on the north side of SR-5/3rd Ave North intersection will be installed with the RRR
- The existing pedestrian signal on SR-5 between 4th Ave North and 5th Ave North will be evaluated to see if it can be a raised crosswalk
 - Regardless if the crosswalk can be raised or if it needs to stay at grade, the faded markings will be updated as a part of the RRR
- We would like to evaluate a raised intersection at 7th Ave South
 - The Department can do the design/evaluation
 - We need the City's help in leading a public meeting/getting the public support necessary for the improvement
 - We need a resolution from the City Commission endorsing the raised intersection

We believe the combination of the speed management techniques listed above provide a great benefit to the community and the traveling public, and would like to work with you further on them.

Please kindly respond with your concurrence. I am happy to talk more if needed. Thank you in advance.
