Part 1 – Project and Sponsor Information			
Name of Action or Project: Salmon Creek Stream Realignment Project			
Project Location (describe, and attach a location map): 295 Lansingville Rd, Town of Lansing, Tompkins County, New York			
Brief Description of Proposed Action: The Town of Lansing, in cooperation with Tompkins County Soil & Water Conservation District, proposes a long-term stabilization strategy for realignment of approximately 1,650 feet of Salmon Creek, extending 110 feet upstream and 550 feet downstream of the current impacted roadbed area. Upstream of the impacted area will focus on establishing stable bankfull cross section geometry and reestablishment of ample floodplain to reduce channel velocity as it approaches the roadway. Reconfiguration of the upstream channel will also provide significant reduction of channel/roadway approach angle by realigning the channel to a flowpath that more gradually parallels Salmon Creek Road. Downstream of the impacted area, reconfiguration of the reach would include construction of stable bankfull cross-section geometry and establishment of active floodplain (bankfull bench) between the stream and the roadway through the area of the roadway that is eroding. The bankfull bench coupled with riprap armoring of the roadway embankment, will provide energy dissipation during high flow events and moves the flood thalweg away from the toe of the embankment slope, thereby reducing shear stress. The realigned channel will also need cross vanes or other structures to maintain grade control, reduce streambank erosion, maintain channel/floodplain connectivity, and prevent lateral migration of the channel back towards the road embankment.
