

Lighting Plan

This project will include one single LED wall pack light on the outside of the building. It will be located over the overhead door facing North. I have provided a picture of the type/style/size of the light. This fits and aligns with what I already have at the property and what has been allowed before on my other buildings. There has never been an issue with the lighting as it is not seen by any neighbors. The lighting is used to ensure safety and security.
