

United Storage, for Building 24 (new construction siteplan), has considered the following questions and recommendations from Tompkins County GML-239 Review Recommendations.

Specifically:

1. This building will likely not contain any appliances for its likely use of operation. The recommendations have been considered.
2. Electric heat pumps have been considered and work well. Given that there is a current natural gas moratorium in Lansing, electric heat pumps would be the likely choice. The recommendations have been considered.
3. I have solar panels on roofs of other buildings at the property. At this time, we would not plan to place solar panels on this building, but that may change. The recommendations have been considered.
4. The building will only have one window, and will have tight air sealing around all windows and doors. The building is a standard rectangle shape. The recommendations have been considered.
- 5-7. This is a one-unit building (less than 20 units).
