

## **Landscape plan**

This site at 8-18 TBR is an industrial site that is well manicured with lots of grass and open space, many different varieties of trees, gardens and shrubs. It is always well maintained.

The proposed project will not be disturbing any of the grass, green space, or gardens. It will add some new grass and maybe 6 buffering trees adjacent to the south property lines. This project is so small, there is nothing else to add, nor is there room for much more.

I'm thinking the trees will be either a dense evergreen (Dwarf Alberta Spruce-(*Picea glauca* 'Conica') or arborvitae (*Thuja occidentalis*). This will provide a very nice green wall buffer.

The size will be most likely 3-5 ft depending on what is available to buy at the given time.

The trees will be located along the south side of the building facing the Town of Lansing's new DPW building. I would expect the town to be adding a buffer of their own on their side of the property, so it should work out well with both sides adding a nice buffer.
