Description	Rate	Qty	Total
Holiday Lighting Installation Installation of commercial grade holiday lighting along eaves, rooflines and landscaping features - Including labor, materials, takedown of lights and storage (all-inclusive)	\$9,501.00	1	\$9,501.00

Quote Total: \$9,501.00

The main building will be outlined with commercial-grade C9 lighting, covering the complete front gutter line, center architectural peak, and extending along both the north and south gutter lines. Both the north and south entrances will receive dedicated lighting, including C9s along the entrance rooflines and warm-white mini-light strands wrapped around the columns.

The landscape portion will include eight trees—four on each side of the building—with warm-white light strands extending throughout the canopies and tightly wrapped around the trunks. The designated feature tree will receive a denser C9 installation extending from the trunk through the canopy and all the way to the top, creating a more compact and prominent centerpiece for the display.]

The City monument sign will be outlined with C9 lighting, with additional C9s staked low along the surrounding landscaped/mulch bed to create a clean, continuous border of light.

The lighting system will be designed for future flexibility, allowing colors to be changed in following years or adapted for other seasonal displays and events, such as Halloween, without having to redesign the entire installation.
