

Fleet Tire Truck

Current Truck Issues/Concerns

SAFETY!! The crane currently on the truck is rusted out on the inside of the boom where it attaches to the mast. It could potentially break at any time while in use and cause harm to an employee.

The crane is underrated for its intended use now. Equipment, tires, and other components of equipment that we use this crane for to aid in repairs have grown in weight and size since this truck was purchased.

The interior had prior electrical issues in the past where a small fire was started.

Wintertime service calls are a struggle for performance due to internal engine components being worn out.

The bed is bent and tweaked under the crane mast from the lack of stability while lifting.

32 Years Old

New Truck

12,000-pound crane that can be used for multiple things county wide.

Tire Repair at the shop or county wide.

A hydraulic cylinder or hose issue that prevents that unit from being moved, we can utilize this crane to remove that boom from the highway or in other areas that are unsafe if that failure occurs.

It will help in the removal of big hydraulic cylinders on equipment in a safe and manageable way when in need of service.

The truck is dual purpose because of the mechanics body to keep tools in instead of just for lifting things.

Mounted compressor will help with in field repairs.

Jessie,

I went into Accuquote our medium duty ordering tool and built a new F650 equipped the same as the one I currently have in stock. Per your request this is the most recent pricing

On a 2025; soon we will only be able to order 2026 and I expect about a \$2000 price increase on the base model. If we order a truck, you can expect it to be built in about 10-12 weeks

The build and installation of a crane body for this truck will take 8-10 months to complete. The body cost is subject to increase as I used my most recent quote of 107,632.00, the actual cost of the body on the truck I have in stock on my only remaining gas F650 crane, a 2024 model was \$104,741 as you can see tariffs are impacting pricing of aluminum and steel quickly.

My projected cost on a 2025 model is \$185,747.00+135.00 drive out \$185,882.00

A current nationwide search of existing in stock job ready gas engine medium duty crane trucks is essentially non-existent except for the one I have remaining. It is being offered at \$170,989 +135.00(temp tag and title work) for a total of \$171,124.00.

If you are interested in delivery to Bronson, I have drivers available and can deliver to you for \$200.00

Please let me know if I assist you further.

Thank you for the opportunity
Tracey
