Sometimes keeping it simple is the best solution. A water source is a necessity to keep visitors at ease and allow for re-hydration on a long day. Each outdoor water fountain is made to last and constructed with 18 gauge, 304 stainless steel. Operating on a pressure range of 20-105 psi the water fountain is activated by a push button.

**Features:**

- Resistant to sunlight, heat, moisture and wear
- non-squirt push-button bubbler
- vandal resistant screws
- Wall brackets

## Dyson Airblade dB AB14 - 50% Quieter

When working to make the Dyson Airblade dB hand dryer quieter than the original Dyson Airblade™ hand dryer, Dyson engineers focused on reducing sound from two key sources:

**Reduced air rush noise:**

Airblade™ technology results in air traveling at 420 mph through apertures measuring just 0.3 mm in width. Some noise is inevitable.

Dyson engineers have reduced the noise produced by the sheets of air by redesigning the shape of the apertures through which air is forced.

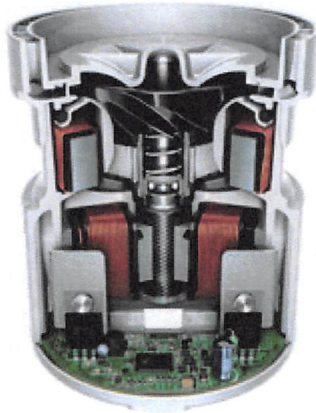

**Reduced motor noise:**

(888) 503-7937  
the Dyson digital motor V4.

CustomerService@ProDryers.com

per second.

The Dyson digital motor V4 was seven years in the making - it's one of the world's smallest fully-integrated 1400W motors. It's the only hand dryer motor powerful enough to draw in 28 liters of air a second through a HEPA filter, and then dry hands in 12 seconds.

This long-life, energy-efficient motor is digitally switched at 6,100 times per second, making the high compression fan spin 92,000 times a minute. There are only three moving parts, so there are no slip rings or carbon brushes to wear down.

## Tough and Durable

The Dyson Airblade dB hand dryer is engineered to last. It has been repeatedly tested for durability and resilience to physical and chemical abuse. Dyson Airblade dB hand dryers have also been exposed to real-life environments to ensure that they can withstand the pressures of high usage.

With strong construction and robust materials, the Dyson Airblade dB hand dryer is suitable for high traffic, high-usage locations where vandalism can be an issue. And because it uses filtered sheets of 420 mph air to dry hands, there is no heating element prone to wear and failure.

## Lowest running costs

Most other hand drying methods are expensive to run. Paper towels need restocking and disposal. Most other hand dryers are slow, and many use a heating element, so they're energy-hungry.

The Dyson Airblade dB hand dryer costs up to 69% less to run than other hand dryers per year, and up to 97% less than paper towels.

## 12 second dry time

Testing based on NSF Protocol P335 shows that most other hand dryers are much slower than their manufacturers claim. Many people give up when using a slow hand dryer. But damp hands can spread up to 1,000 times more bacteria than dry hands.

Testing based on NSF P335 proves that Dyson Airblade™ hand dryers are the fastest. The Dyson Airblade dB hand dryer dries hands hygienically in 12 seconds. Airblade technology™ combined with the Dyson digital motor V4 creates high speed sheets of air that scrape water from both sides of the hands simultaneously. It's the fastest way.

For more information on NSF P335. [Click here.](#)

## HACCP Approved

The Dyson Airblade dB hand dryer has been approved by HACCP International as safe for use in the food and beverage industry.

(888) 503-7937

CustomerService@ProDryers.com

clean and is a touch-free system. It also has a fast dry cycle. With the inclusion of a HEPA filter, these features combine to considerably reduce the risk of microbiological contamination and thereby meet HACCP international's food safety criteria "

## NSF approved

No other hand dryer meets every part of NSF Protocol P335.

The Dyson Airblade dB hand dryer dries hands in just 12 seconds. It's the fastest hand dryer. It also has touch-free operation, uses a HEPA filter and has a lifetime antimicrobial coating to protect the product.

## Dyson Airblade Technology - The most hygienic hand dryers

Most other hand dryers are unhygienic. They don't filter bacteria from the restroom air. They suck in dirty air then blow it back onto hands. The Dyson Airblade dB AB14 hand dryer uses a HEPA filter to remove 99.97% of bacteria at 0.3 microns from the air used to dry hands. So hands are dried using cleaner air, not dirty air.

Only Dyson Airblade™ hand dryers are certified hygienic by independent public health specialists, NSF international. No other hand dryers meet every part of the NSF Protocol P335. As well as having a fast dry time and HEPA filters, the Dyson Airblade dB AB14 hand dryer also has touch-free operation and an antimicrobial coating.

## More Dyson AB14 Airblade dB features

- Low environmental impact - 62% less CO2 than paper towels
- Sealed casing infused with antimicrobial additives to protect the product.
- NSF Approved, HACCP Certified
- Touch-free operation - No dirty buttons to press
- Improved acoustics - Air in the Dyson Airblade™ hand dryer travels at 420mph through apertures the thickness of a human eyelash, so sound is inevitable. However, Dyson acoustic engineers have now significantly reduced the unpleasant tones using six Dyson-designed Helmholtz silencers.
- 5 year warranty - The Dyson AB14 Airblade dB hand dryer comes with a 5 year parts and first year limited labor warranty.
