

Summary of Information from April-June SVCE Member Agency Working Group (MAWG) Meetings

- CAISO/CPUC are forecasting possible electricity supply shortages this summer due to drought, high temps and wildfires (though they note that 2022 capacity conditions are better compared to last year due to increased storage). SVCE has a multi prong approach to reduce risk for its member agencies. **Demand response programs** will be an important tool to minimize outages and they are looking for member agency participation in pushing flex and energy emergency alerts to customers. These alerts/messages are typically sent to PIOs. Up-to-date information is available on the [ISO Today app](#) and on twitter accounts: twitter.com/California_ISO and twitter.com/flexalert
- [FutureFit Fundamentals Contractor Training](#) is a free self-paced online training course that familiarizes licensed contractors working in Santa Clara County (and their employees) with all-electric technologies (heat-pump water & space heaters, etc.). Contractors receive a \$500 stipend upon completion and are eligible for a \$5K installation incentive. SVCE is seeking member agency assistance in promoting training to contractors working in their cities.
- SVCE has multiple **grant programs** running or planned (I will forward more detailed info as available)
 - [FutureFit EV Charging](#) Installation (for multi-family housing projects)
 - Electrification for Demonstration Project Grants (focused on public/community buildings and affordable housing - fall deadline)
 - Electrification Engagement Grants (eg EV ride & drive, induction cooking ed, smart power strip purchases)
 - MTC transportation electrification funding: eligible projects include fleet conversion & charging infrastructure; Aug 10th deadline
