

MADERA COUNTY
TRAFFIC MONITORING PROGRAM

2024

TRAFFIC VOLUMES REPORT

MAY 2025

INTRODUCTION

The Madera County Transportation Commission (MCTC) is the Regional Transportation Planning Agency (RTPA) and the designated Metropolitan Planning Organization (MPO) for Madera County. The Madera metropolitan boundary covers the entire County of Madera. The MCTC is responsible for the development and adoption of the Regional Transportation Plan and Transportation Improvement Program as required by state law.

MCTC's role is to foster intergovernmental coordination; undertake comprehensive regional planning with an emphasis on transportation issues; provide a forum for citizen input into the planning process; and to provide technical services to its member agencies. In all these activities the MCTC works to develop a consensus among its members with regards to multi-jurisdictional transportation issues.

The Madera County Traffic Monitoring Program – 2024 Traffic Volume Report has been developed as part of the Fiscal Year 2024/25 Overall Work Program (OWP) of the MCTC. A traffic monitoring report is published annually to provide current traffic count information for planning and engineering projects. The objective is to maintain the Madera County Traffic Monitoring Program as a source of current traffic information for use by local agencies, Tribal Governments, and the public, and as a validation tool for the county-wide traffic model and vehicle-miles-traveled (VMT) monitoring requirements.

PURPOSE OF TRAFFIC COUNTS

The MCTC's Traffic Monitoring Program is a beneficial data source for both public and private interests. Some of the typical uses are:

Air Quality Monitoring - Federal regulations require that an air quality planning program be established. Traffic counts can identify vehicle types, speeds, and volumes to aid in determining levels of pollutants and their sources.

Transportation Modeling - The MCTC maintains a regional traffic simulation model to assist in air quality and transportation planning. This model is dependent upon current and accurate traffic counts to aid in future transportation and development planning.

Traffic Signal Priorities and Capital Improvement Programs - Each year agencies develop budgets for projects and improvements for the next fiscal year. Since funds are limited, project priorities must be set. Traffic counts assist in setting those priorities.

Other Benefits Derived from Traffic Counts - Regular monitoring of traffic volumes assists in the determination of growth rates, traffic accident rates, traffic signal and stop sign warrants, optimization of traffic signal timing, and traffic noise levels.

Private Use - Traffic counts are of service to private business. Uses include determination of location and economic potential of a proposed business. Likewise, traffic count data offer substantial benefits to real estate appraisal and financing decisions.

TRAFFIC COUNTING METHOD

The traffic count locations were determined by MCTC with input from its member agencies. The traffic volume metrics were obtained utilizing StreetLight InSight. StreetLight InSight is a big data web platform that harnesses connected device and Internet of Things (IoT) data to measure vehicle, transit, bike and foot traffic. StreetLight AADT provides average annual daily traffic (AADT) for all zones on US and Canadian roadways. StreetLight AADT uses a machine-

learning algorithm trained with real-world data plus a blend of Navigation-GPS and location-based services (LBS) Data to create estimated AADT and includes a prediction interval for each zone in the metrics download. For the traffic volume information in this report, AADT data was extracted for the time period of January 1, 2024 – December 31, 2024. The data set includes trips from any device that moves like a motorized vehicle on the road such as cars, trucks, buses, motorcycles, etc. Asterisk entries indicate counts extracted from StreetLight that have been removed because they are inconsistent with previous years.

TRAFFIC COUNT DATA

In addition to the data extracted from StreetLight InSight, this report also contains traffic count information dating back to 2019 obtained from previous Madera County Traffic Volume Reports. Previous to 2023, the counts were collected using portable road tube counters. The data are attached and are separated based on the jurisdiction of the roadway. Traffic count data within the four jurisdictions listed below are included in this report:

- County of Madera
- City of Madera
- City of Chowchilla
- State of California (Caltrans)

The Caltrans data contains the most recent (year 2022) Average Daily Traffic (ADT) counts calculated by Caltrans. As of the date of this report, the Caltrans traffic counts are available at the following internet address:

<https://dot.ca.gov/programs/traffic-operations/census>
