## Description

**HYDROMATIC®**

## **Hydromatic S4L Submersible Solids Handling Pumps Description**

Hydromatic S4L Submersible Solids Handling Pumps is designed to meet the demands of Municipal, Commercial and Industrial Areas.

## **Hydromatic S4L Typical Application**

- Municipal
- Commercial
- Industrial

## **Hydromatic S4L Superior Features**

- Oil filled motor efficiently dissipates heat and locks out damaging moisture so you receive reliable pumping service. Easily field serviceable.
- Standard construction is cast iron.
- Stainless steel shaft eliminates corrosion and fatigue for longer pump life. The minimum shaft overhang decreases bearing and seal life. Tapered shaft allows for easy removal of impeller.
- Available with a wide range of impellers for different applications. Pump-out vanes on the top shroud prevent the buildup of materials in the seal area and extend the life of the thrust bearing by significantly reducing axial thrust.
- The connection box has two epoxy barriers and a compression fitting that prevent water contamination of the motor area, assuring long-term reliable operation. In addition, epoxy encapsulation and stripped leads positively eliminate "wicking" from the cable
- Heavy duty upper and lower ball bearings are submerged in oil to provide permanent lubrication and ensure long service life.
- Easily replaceable, true wear ring, with a top pullout design for easy disassemble operation.
